1. INTRODUCTION

This manual describes how the FZ-CT/GD and FX-CT/GD series balances work and how to get the most out of them in terms of performance.

Read this manual thoroughly before using the balance and keep it at hand for future reference.

1-1 About This Manual

This manual consists of the following five parts:

- Basic operation: Describes precautions on handling the balance, balance construction and basic balance operation.
- Adapting to the environment: Describes response adjustment and calibration.
- Functions: Describes various functions of the balance.
- RS-232C serial interface: Describes the interface which transmits data and controls the balance.
- Maintenance: Describes maintenance, error codes, troubleshooting, specifications and options.

1-2 Features

- Compact general-purpose balance, can be installed almost anywhere.
- Casing construction, strong protection against dust and moisture.
- Multiple weighing units with most of the common units used around the world.
  The default settings of the unit of weight for the FZ-CT and FX-CT series balance are the metric carat (ct) and grams (g). The unit can be switched by pressing the MODE key.
  The default setting of the unit of weight for the FZ-GD and FX-GD series balance is grams (g).
- Standard RS-232C serial interface to communicate with a computer and to output the Good Laboratory Practice (GLP) data
- Statistical calculation mode to statistically calculate the weight data, and display or output the sum, maximum, minimum, range (maximum-minimum), average, standard deviation and coefficient of variation.
- Comparator Indicators, displaying the comparison results.
- Small breeze break, provided for the FZ-GD series (all models) and FX-120GD/200GD/300GD; and large breeze break, provided for the FZ-300CT/600CT and FX-300CT/600CT for more accurate weighing.
- Underhook, provided for suspended weighing.
- Hold Function, provided for weighing a moving object such as an animal.
- As options, the USB interface (FXi-02), the Ethernet interface (FXi-08) and the built-in battery unit (FXi-09) are available.
1-3 Compliance

Compliance with FCC Rules

Please note that this device generates, uses and can radiate radio frequency energy. This device has been tested and has been found to comply with the limits of a Class A computing device pursuant to Subpart J of Part 15 of FCC rules. These rules are designed to provide reasonable protection against interference when this device is operated in a commercial environment. If this unit is operated in a residential area, it may cause some interference and under these circumstances the user would be required to take, at his own expense, whatever measures are necessary to eliminate the interference.

(FCC = Federal Communications Commission in the U.S.A.)

Compliance with EMC Directives

This device features radio interference suppression and safety regulation in compliance with the following Council Directives

Council directive 89/336/EEC EN61326 EMC directive
Council directive 73/23/EEC EN60950 Safety of Information Technology Equipment

The CE mark is an official mandatory European marking.
Please note that any electronic product must comply with local laws and regulations when sold or used anywhere outside Europe.
A & D Instruments Ltd. hereby declare that the **FZ-1 series** conforms to the requirements of the council directives on...

**Electromagnetic Compatibility (EMC) 2004/108/EC and Low Voltage (LVD) 2006/95/EC**

provided that they bear the CE mark of conformity.

**Standards applicable:**
- EN 61326:2006
- Electrical equipment for measurement, control and laboratory use - EMC requirements. Minimum immunity test requirements

For the AC Adapter Models: TB-238E, TB-238U, TB-219(EPA-121DA-15), TB-124E and TB-124U:

**Standards applicable:** EN 60950-1, EN61204-3, EN 55022, EN55024, EN 61000-3-2, EN61000-3-3

**CE Mark first applied March 2009**

2. UNPACKING THE BALANCE

2-1 Unpacking

- The balance is a precision instrument. Unpack the balance carefully. Keep the packing material to be used for transporting the balance in the future.
- The packing contents depend on the balance model. See the illustrations to confirm that everything is contained.

FZ-GD / FX-GD series balances

Note
Please confirm that the AC adapter type is correct for your local voltage and receptacle type.

How to assemble the breeze break
(For the FZ-GD series (all models) and FX-120GD/200GD/300GD)

Assemble the breeze break as shown below.
Follow the numbered sequence.
FZ-CT / FX-CT series balances

Be sure to install the breeze break before use.

How to install the breeze break

Follow the numbered sequence.

1. Pull out the handles and place the breeze break on the balance main unit.
2. Push in the handles.
3. To open the top door to place a sample: Remove a screw on either side of the top. The top door rotates to open with the other screw as a pivot point.

Note

The large breeze break is delivered in a separate package.

Confirm that the handle’s hooks (each side) are under the breeze break lower plate.

Note

Please confirm that the AC adapter type is correct for your local voltage and receptacle type.

The AC adapter plug is protected against dust and may be difficult to insert. When inserting the plug, turn the plug while pushing on it.
2-2 Installing the Balance

Install the balance as follows:

1. Place the balance on a solid weighing table. Refer to “3. PRECAUTIONS” for installing the balance.

2. FZ-GD series (all models) and FX-120GD /200GD /300GD
   Assemble the pan support, weighing pan and small breeze break, on the balance as shown in the illustration on page 7.
   FX-1200GD /2000GD /3000GD
   Assemble the pan support and weighing pan on the balance as shown in the illustration on page 7.
   FZ-300CT /600CT and FX-300CT /600CT
   Assemble the breeze ring, pan support, weighing pan and large breeze break on the balance as shown in the illustration on page 8.

3. Adjust the leveling feet to level the balance. Confirm it using the bubble spirit level.

4. Confirm that the AC adapter type is correct for the local voltage and power receptacle type.

5. Connect the AC adapter to the balance. Warm up the balance for at least 30 minutes with nothing on the weighing pan.

Note
The AC adapter plug is protected against dust and may be difficult to insert. When inserting the plug, turn the plug while pushing on it.
3. PRECAUTIONS

To get the optimum performance from the balance and acquire accurate weight data, note the following:

3-1 Before Use

- Install the balance in an environment where the temperature and humidity are not excessive. The best operating temperature is about 20°C / 68°F at about 50% relative humidity.
- Install the balance where it is not exposed to direct sunlight and it is not affected by heaters or air conditioners.
- Install the balance where it is free of dust.
- Install the balance away from equipment which produces magnetic fields.
- Install the balance in a stable place avoiding vibration and shock. Corners of rooms on the first floor are best, as they are less prone to vibration.
- The weighing table should be solid and free from vibration, drafts and as level as possible.
- Level the balance by adjusting the leveling feet and confirm it using the bubble spirit level.
- Ensure a stable power source when using the AC adapter.
- Plug in the AC adapter and warm up the balance for at least 30 minutes.
- Calibrate the balance before use or after having moved it to another location.

Caution
Do not install the balance where flammable or corrosive gas is present.

3-2 During Use

- Discharge static electricity from the material to be weighed (hereinafter referred to as the sample). When a sample could have a static charge, the weight data is influenced. Ground the balance and try the following:
  - Eliminate static electricity using the optional AD-1683 DC static eliminator.
  - Try to keep the ambient humidity above 45%RH.
  - Use a metal shield case for a charged sample.
  - Wipe charged plastic samples with a moistened cloth.
• This balance uses a strong magnet as part of the balance assembly, so please use caution when weighing magnetic materials such as iron. If there is a problem, use the underhook on the bottom of the balance to suspend the material away from the influence of the magnet.

• Eliminate the temperature difference between a sample and the environment. When a sample is warmer (cooler) than the ambient temperature, the sample will be lighter (heavier) than the true weight. This error is due to a rising (falling) draft around the sample.

• Make each weighing gently and quickly to avoid errors caused by the evaporation of moisture from the sample or the absorption of moisture by the sample. For balances with a minimum weighing value of 0.001g or less, use a pair of long tweezers to place a sample on the pan to avoid placing a hand inside the breeze break.

• Do not drop things upon the weighing pan, or place a sample on the pan that is beyond the balance weighing capacity. Place a sample in the center of the weighing pan.

• Do not use a sharp instrument such as a pencil to press the keys. Use your finger only.

• Press the RE-ZERO key before each weighing to eliminate possible errors.

• Calibrate the balance periodically so as to eliminate possible errors.

• Take into consideration the affect of air buoyancy on a sample when more accuracy is required.

• Keep the balance interior free of dust and foreign materials.

• The breeze break (FZ-GD series (all models) and FZ-300CT/600CT and FX-300CT/600CT/120GD/200GD/300GD) is provided as an accessory. An anti-static treatment has been applied to the breeze break components, but they may be charged with static electricity when they are unpacked or when the humidity is low. If the weight value is unstable even when there are no drafts or the balance has a problem with repeatability, remove the breeze break. Or wipe the clear plates with a moistened cloth, use the optional AD-1683 DC static eliminator or apply an anti-static spray.

3-3 After Use

• Avoid mechanical shock to the balance.

• Do not disassemble the balance. Contact the local A&D dealer if the balance needs service or repair.

• Do not use organic solvents to clean the balance. Clean the balance with a lint free cloth that is moistened with warm water and a mild detergent.

• The edge of the weighing pan is sharp. Use much care when cleaning the pan.

• Avoid dust and water so that the balance weighs correctly. Protect the internal parts from liquid spills and excessive dust.

3-4 Power Supply

• When the AC adapter is connected, the balance is in the standby mode if the standby indicator is on (refer to "4. DISPLAY SYMBOLS AND KEY OPERATION"). This is a normal state and does not harm the balance. For accurate weighing, warm up the balance for at least 30 minutes before use.
4. DISPLAY SYMBOLS AND KEY OPERATION

Key operation

Key operation affects how the balance functions. The basic key operations are:

- “Press and release the key immediately” or “Press the key” = normal key operation during measurement
- “Press and hold the key”

Display symbols

- Number of statistical data (Statistical calculation mode)
- Displays the weight data relative to the weighing capacity, in percentage, in the weighing mode (Capacity indicator)

<table>
<thead>
<tr>
<th>Key</th>
<th>When pressed</th>
<th>When pressed and held</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON-OFF</td>
<td>Turns the display on or off. The standby indicator is displayed when the display is turned off. The weighing mode is enabled when the display is turned on. This key is available anytime. Pressing the key during operation will interrupt the operation and turn the display off.</td>
<td></td>
</tr>
</tbody>
</table>
| SAMPLE | In the weighing mode, turns the minimum weighing value on or off. In the counting or percent mode, enters the sample storing mode. | Enters the function table mode. Refer to “9. FUNCTION TABLE”.
| MODE | Switches the weighing units stored in the function table. Refer to “9-9 Storing Units”. | Enters the response adjustment mode. |
| CAL | Cancels the operation when performing settings. | Enters the calibration mode. |
| PRINT | Outputs the weight data to a printer or personal computer using the RS-232C serial interface, depending on the function table settings. Confirms the operation when performing settings. | No function at the factory setting By changing the function table: Outputs “Title block” and “End block” for GLP report. |
| Z-ERO | Sets the display to zero. | |
5. WEIGHING

5-1 FZ-CT / FX-CT Series Balances

The default settings of the unit of weight for the FZ-CT / FX-CT series balances are the metric carat (ct) and grams (g).

Pressing the MODE key switches the displayed unit, between ct and g.

To use other units, refer to “9-9 Storing Units” on page 38 to store the units.

5-2 Basic Operation (FZ-CT / FX-CT Series Balances)

1. Place a container (carat pan) on the weighing pan, if necessary.

   Press the RE-ZERO key to cancel the weight (tare). The balance displays 0000 ct. (The decimal point position depends on the balance model.)

2. Place a sample on the pan or in the container.

3. Wait for the stabilization indicator to be displayed. Read the value.

   While the stabilization indicator is on, pressing the PRINT key will output the weight value, using the RS-232C serial interface.

   **Note**
   Peripheral equipment, that is sold separately, such as a printer or a personal computer is required.

4. Remove the sample and container from the pan.

   **Notes**
   When other units of weight are stored as described in “9-9 Storing Units”, pressing the MODE key switches the displayed unit.

   Press the SAMPLE key to turn on or off the minimum weighing value.

   When the ON:OFF key is pressed with a container placed on the weighing pan, the balance displays 0000 ct and weighing is started.
5-3 FZ-GD / FX-GD Series Balances

The default setting of the unit of weight for the FZ-GD / FX-GD series balances is grams (g).
To use other units, refer to “9-9 Storing Units” on page 38 to store the units.

5-4 Basic Operation (FZ-GD / FX-GD Series Balances)

1. Place a container on the weighing pan, if necessary.  
   Press the **RE-ZERO** key to cancel the weight (tare). The balance displays **0.000 g** (The decimal point position depends on the balance model.)

2. Place a sample on the pan or in the container.

3. Wait for the stabilization indicator to be displayed. Read the value.
   While the stabilization indicator is on, pressing the **PRINT** key will output the weight value, using the RS-232C serial interface.

   **Note**  
   Peripheral equipment, that is sold separately, such as a printer or a personal computer is required.

4. Remove the sample and container from the pan.

**Notes**
When other units of weight are stored as described in “9-9 Storing Units”, pressing the **MODE** key switches the displayed unit.
Press the **SAMPLE** key to turn on or off the minimum weighing value.

When the **ON:OFF** key is pressed with a container placed on the weighing pan, the balance displays **0.000 g** and weighing is started,
6. RESPONSE ADJUSTMENT

This function stabilizes the weight value, reducing the influence on weighing that is caused by drafts and vibration at the place where the balance is installed.

The function has three stages as follows and can be changed by simple key operation.

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>FAST</td>
<td>Fast response, but prone to drafts and vibration. Good for target weighing.</td>
</tr>
<tr>
<td>MID.</td>
<td>Slow response, but strong against drafts and vibration.</td>
</tr>
<tr>
<td>SLOW</td>
<td>Good for weighing which requires a stable display.</td>
</tr>
</tbody>
</table>

**Operation**

1. Press and hold the **MODE** key until **RESPONSE** is displayed. And then, release the key.
2. Press the **MODE** key to select a rate of the response adjustment. Either FAST, MID or SLOW can be selected.
3. After a few seconds of inactivity, or when the **PRINT** key is pressed, the balance displays the updated response indicator. The response indicator remains displayed for a while.

**Note**

Setting the response rate automatically changes the “Condition (Cond)” and “Display refresh rate (Spd)” parameters of “Environment, Display (bASFnCe)” in the function table, as shown below:

**FZ-CT / FX-CT series**

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Cond (Condition)</th>
<th>Spd (Display refresh rate)</th>
</tr>
</thead>
<tbody>
<tr>
<td>FAST</td>
<td>0</td>
<td>1</td>
</tr>
<tr>
<td>MID.</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>SLOW</td>
<td>2</td>
<td>0</td>
</tr>
</tbody>
</table>

**FZ-GD / FX-GD series**

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Cond (Condition)</th>
<th>Spd (Display refresh rate)</th>
</tr>
</thead>
<tbody>
<tr>
<td>FAST</td>
<td>0</td>
<td>2</td>
</tr>
<tr>
<td>MID.</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>SLOW</td>
<td>2</td>
<td>0</td>
</tr>
</tbody>
</table>

When the balance is to be used with other setting combinations, set each parameter in the function table.
7. CALIBRATION

7-1 Calibration Mode

Calibration / Calibration test
- Calibration Using the Internal mass (only for FZ-CT/GD series)
- Calibration using an external weight
- Calibration test using an external weight (Calibration test does not perform calibration.)

Terms
The following terms are defined as follows:

- **External weight** = A weight that you have. Referred to as a calibration weight when used for calibration.
- **Calibration weight** = A weight used for calibration
- **Target weight** = An external weight used for calibration test

Caution
- Calibration adjusts the balance for accurate weighing.
  Besides periodic calibration and before each use, perform calibration when:
  - The balance is installed for the first time.
  - The balance has been moved.
  - The ambient environment has changed.
- Do not allow vibration or drafts to affect the balance during calibration.
- To output the data for GLP using the RS-232C serial interface, set “GLP output (inF0)” of “Data output (dout)”.
  For details, refer to “9. FUNCTION TABLE”.
- Calibration test is available only when “GLP output (inF0)” of “Data output (dout)” is set to "1" or "2".

Caution on using an external weight
- The accuracy of an external weight will influence the accuracy of weighing. Select an appropriate weight as listed below:

<table>
<thead>
<tr>
<th>Model</th>
<th>Usable calibration weight</th>
<th>Adjustable range</th>
</tr>
</thead>
<tbody>
<tr>
<td>FZ-300CT / FX-300CT</td>
<td>50 g, 20 g</td>
<td></td>
</tr>
<tr>
<td>FZ-600CT/ FZ-120GD</td>
<td>100 g, 50 g</td>
<td>-0.050 g to +0.050 g</td>
</tr>
<tr>
<td>FX-600CT/ FX-120GD</td>
<td></td>
<td></td>
</tr>
<tr>
<td>FZ-200GD / FX-200GD</td>
<td>200 g, 100 g</td>
<td></td>
</tr>
<tr>
<td>FZ-300GD / FX-300GD</td>
<td>300 g, 200 g, 100 g</td>
<td></td>
</tr>
<tr>
<td>FZ-1200GD / FX-1200GD</td>
<td>1000 g, 500 g,</td>
<td>-0.50 g to +0.50 g</td>
</tr>
<tr>
<td>FZ-2000GD / FX-2000GD</td>
<td>2000 g, 1000 g</td>
<td></td>
</tr>
<tr>
<td>FZ-3000GD / FX-3000GD</td>
<td>3000 g, 2000 g, 1000 g</td>
<td></td>
</tr>
</tbody>
</table>

The calibration weight in bold type: factory setting
The calibration weight value can be adjusted within the range above.

Display
- This indicator means “the balance is measuring calibration data”.
  Do not allow vibration or drafts to affect the balance while this indicator is displayed.
7-2 Calibration Using the Internal mass (One-Touch Calibration, only for FZ-CT/GD series)

This function calibrates the balance using the internal mass. The only operation required is to press the CAL key. (The FX-CT/GD series does not have the one-touch calibration function.)

**Operation**

1. Connect the AC adapter and warm up the balance for at least 30 minutes with nothing on the weighing pan.
2. After carefully installing the small breeze break, press the CAL key.
3. The balance displays Calin and performs calibration using the internal mass. Do not allow vibration or drafts to affect the balance.
4. The balance displays End after calibration. If the “GLP output (mF)” parameter of the function table is set to “1” or “2”, the balance displays GLP and outputs “Calibration Report” using the RS-232C interface or stores the data in memory. For details on the calibration report format, refer to “10-2 GLP Report”.
5. The balance will automatically return to the weighing mode after calibration.

**About the internal mass**

The mass of the internal mass may change due to corrosion or other damage caused by the operating environment, or due to aging. Check the internal mass periodically. Correct the internal mass value as necessary.

To maintain the weighing accuracy, perform the calibration using an external weight periodically, as described below.
7-3 Calibration Using an External Weight

This function calibrates the balance using an external weight.

**Operation**

1. Connect the AC adapter and warm up the balance for at least 30 minutes with nothing on the pan.

2. Press and hold the **CAL** key until **Calout** is displayed, and then release the key.

3. The balance displays **Cal 0**.
   - If you want to change the calibration weight (a list of usable weights is shown on page 16), press the **SAMPLE** key and proceed to step 4.
   - If you use the calibration weight value stored in the balance, proceed to step 5.

4. Specify the calibration weight value as follows:
   - **SAMPLE** key: To switch the display condition to: “All of the segments blinking” (calibration weight selection mode) or “The last two digits blinking” (value adjustment mode).
   - **RE-ZERO** key (To increase the value)
   - **MODE** key (To decrease the value)
     - To select the calibration weight or adjust the value.
   - **PRINT** key: To store the new weight value. Even if the AC adapter is removed, the data is maintained in non-volatile memory.
   - **CAL** key: To cancel the operation and return to **Cal 0**.
5 Confirm that there is nothing on the pan and press the [PRINT] key. The balance measures the zero point. Do not allow vibration or drafts to affect the balance. The balance displays the calibration weight value.

6 Place the displayed calibration weight on the pan and press the [PRINT] key. The balance measures the calibration weight. Do not allow vibration or drafts to affect the balance.

7 The balance displays **End**. Remove the weight from the pan.

8 When the GLP output is set, the balance displays **GLP** and outputs “Calibration Report”.

9 The balance will automatically return to the weighing mode.

10 In the gram mode, place the calibration weight on the pan and confirm that the value displayed is within ±2 digits of the specified value. If it is not within the range, check the ambient conditions such as drafts and vibration, also check the weighing pan. Then, repeat steps 1 to 9.
7-4 Calibration Test Using an External Weight

This function tests the balance weighing accuracy using an external weight and outputs the result. This is available only when the “GLP output (i_{ref})” parameter is set to “1” or “2”. (Calibration test does not perform calibration.)

Operation

1. Connect the AC adapter and warm up the balance for at least 30 minutes with nothing on the pan.

2. Press and hold the CAL key until CC0 is displayed, and then release the key.

3. The balance displays CC0.
   - If you want to change the target weight (a list of usable weights is shown on page 16), press the SAMPLE key and proceed to step 4.
   - If you use the target weight value stored in the balance, proceed to step 5.

4. Specify the target weight value as follows:
   - SAMPLE key To switch the display condition to: “All of the segments blinking” (target weight selection mode) or “The last two digits blinking” (value adjustment mode).
   - RE-ZERO key (To increase the value)
   - MODE key (To decrease the value)
   - To select the target weight or adjust the value.
   - PRINT key To store the new weight value. Even if the AC adapter is removed, the data is maintained in non-volatile memory.
   - CAL key To cancel the operation and return to CC0.
5 Confirm that there is nothing on the pan and press the PRINT key. The balance measures the zero point and displays the measured value. Do not allow vibration or drafts to affect the balance. The balance displays the target weight value.

6 Place the displayed target weight on the pan and press the PRINT key. The balance measures the target weight and displays the measured value. Do not allow vibration or drafts to affect the balance.

7 The balance displays [End]. Remove the weight from the pan.

8 When the GLP output is set, the balance displays [GLP] and outputs “Calibration Test Report”.

9 The balance will automatically return to the weighing mode.
8. FUNCTION SWITCH AND INITIALIZATION

8-1 Permit or Inhibit

The balance stores parameters that must not be changed unintentionally. There are two switches for the purpose of protecting these parameters. Each switch can select either “permit” or “inhibit”. The “inhibit” protects parameters against unintentional operations.

<table>
<thead>
<tr>
<th></th>
<th>FZ-CT/ FZ-GD series</th>
<th>FX-CT/ FX-GD series</th>
</tr>

  - To inhibit changes to the function table
  - To permit changes to the function table
- Not used
- Calibration using an external weight
  - To inhibit calibration using an external weight
  - To permit calibration using an external weight
- Not used
- Not used
Operation
1. Press the **ON:OFF** key to turn off the display.
2. While pressing and holding the **PRINT** key and the **SAMPLE** key, press the **ON:OFF** key. The balance displays \( P5 \).
3. Press the **PRINT** key. Then the balance displays the function switches.
4. Set the switches using the following keys.
   - **SAMPLE** key: To select the switch to change the parameter.
   - **RE-ZERO** key: To change the parameter of the switch selected.
     - 0: To inhibit changes.
     - 1: To permit changes
   - **PRINT** key: To store the new parameter and return to the weighing mode.
   - **CAL** key: To cancel the operation (\( Clr \) is displayed.) To return to the weighing mode, press the **CAL** key once again.

8-2 Initializing the Balance

This function returns the following parameters to factory settings.
- Calibration data
- Function table
- The sample unit mass value (counting mode), 100% reference mass value (percent mode)
- External calibration weight
- Function switch settings
- Statistical data
- Internal mass value (Only for FZ-CT/ FZ-GD series)

Note
Be sure to calibrate the balance after initialization.

Operation
1. Press the **ON:OFF** key to turn off the display.
2. While pressing and holding the **PRINT** key and the **SAMPLE** key, press the **ON:OFF** key. The balance displays \( P5 \).
3. Press the **SAMPLE** key to display \( Clr \).
4. Press the **PRINT** key.
   To cancel this operation, press the **CAL** key.
5. Press the **RE-ZERO** key.
6. Press the **PRINT** key to initialize the balance.
   The balance will automatically return to the weighing mode.
9. FUNCTION TABLE

The function table reads or rewrites the parameters that are stored in the balance. These parameters stored, even if the AC adapter is removed, are maintained in non-volatile memory.

9-1 Structure and Sequence of the Function Table

The function table menu consists of two layers. The first layer is the "Class" and the second layer is the "Item". Each item stores a parameter.

Example

This example sets "Auto print mode A" for "Data output mode" and "100 digits" for "Auto print difference".

**Caution**

The balance may not transmit the data completely at the specified refresh rate, depending on the baud rate.

When a refresh rate of 20 times/second is used, set the baud rate to 4800 bps or higher.
9-4 Description of the Class “Environment, Display”

**Condition (Cond)**

- **Cond 0**
  - This parameter is for sensitive response to the fluctuation of a weight value. Used for powder target weighing, weighing a very light sample or when quick response weighing is required.
  - After setting, the balance displays [FAST].

- **Cond 2**
  - This parameter is for stable weighing with slow response. Used to prevent a weight value from drifting due to vibration or drafts.
  - After setting, the balance displays [SLOW].

**Note**

With “Hold function (Hold)” set to “ON (1)”, this item is used to set the averaging time.

**Stability band width (5t-b)**

This item controls the width to regard a weight value as a stable value. When the fluctuation per second is less than the parameter, the balance displays the stabilization indicator and outputs the data. The parameter influences the “Auto print mode”

- **5t-b 0**
  - This parameter is for sensitive response of the stabilization indicator. Used for exact weighing.

- **5t-b 2**
  - This parameter ignores slight fluctuation of a weight value. Used to prevent a weight value from drifting due to vibration or drafts.

**Note**

With “Hold function (Hold)” set to “ON (1)”, this item is used to set the stabilization range.

**Hold function (Hold) (Animal weighing mode)**

This function is used to weigh a moving object such as an animal. When the weight data is over the weighing range from zero and the display fluctuation is within the stabilization range for a fixed period of averaging time, the processing indicator illuminates and the balance displays the average weight of the animal. When the animal is removed from the weighing pan, the display returns to zero automatically.

This function is available only when the hold function parameter is set to “1” (the animal mode indicator [ANIMAL] illuminates) and any weighing unit other than the counting mode is selected.

The stabilization range and averaging time are set in “Condition (Cond)” and “Stability band width (5t-b)”.

28
Zero tracking ($\text{trc}$)
This function tracks zero point drift caused by changes in the environment and stabilizes the zero point. When the weight data is only a few digits, turn the function off for accurate weighing.

Note
Digit, when used for the FZ-CT/GD and FX-CT/GD series balances, indicates a unit of minimum weighing value.

<table>

</tr>
</tbody>
</table>

Display refresh rate ($5pd$)
Period to refresh the display. This parameter influences “Stream mode” along with “Baud rate” and “Data output pause”

Note
This item is selected automatically when the response rate is changed.

Decimal point ($\text{pnt}$)
The decimal point format can be selected.

Auto display-ON ($\text{p-on}$)
When the AC adapter is connected, the display is automatically turned on in the weighing mode, without the ON:OFF key operation. Used when the balance is built into an automated system. 30-minute warm up is necessary for accurate weighing.

Auto display-OFF ($\text{p-off}$)
When the AC adapter is connected and no operation is performed (inactivity state) for 10 minutes, the display is automatically turned off and the standby indicator is illuminated.
9-5 Description of the Item “Data Output Mode”

The parameter setting of the “Data output mode (Prt)” applies to the performance when the data is transmitted using the RS-232C serial interface.

Key mode
When the PRINT key is pressed with the stabilization indicator turned on, the balance outputs the weight data and the display blinks one time.

Required setting: $dout\ Prt \ 0$

Auto print modes A and B
When the displayed value is stable and the conditions of “Auto print polarity”, “Auto print difference” and reference value are met, the balance outputs the weight data. When the PRINT key is pressed with the stabilization indicator turned on, the balance outputs the data and the display blinks one time.

Mode A: Required setting
- $dout\ Prt \ 1$ Auto print mode A (reference = zero)
- $dout\ AP-P$ Auto print polarity
- $dout\ AP-b$ Auto print difference

Example
“For outputting the weight value each time a sample is added, with “Ar-d” set to “1” (to adjust zero after the data is output).”

Mode B: Required setting
- $dout\ Prt \ 2$ Auto print mode B (reference = last stable value)
- $dout\ AP-P$ Auto print polarity
- $dout\ AP-b$ Auto print difference

Example
“For outputting the weight value while a sample is added.”

Stream mode
The balance outputs the weight data continuously regardless of the display condition. The display does not blink in this mode.

Required setting
- $dout\ Prt \ 3$ Stream mode
- $bASFnc\ SPD$ Display refresh rate
- $SIF\ bPS$ Baud rate

Example
“For monitoring data on a computer”

Caution
The balance may not transmit the data completely at the specified refresh rate and baud rate. Set the baud rate higher.

Key mode B
When the PRINT key is pressed, the balance outputs the weight data, regardless of the display condition. The display does not blink in this mode.

Key mode C
When the PRINT key is pressed with the stabilization indicator turned on, the balance outputs the weight data. When the stabilization indicator is not on, the balance waits for the indicator to turn on and outputs the data. The balance blinks one time in this mode.
Interval output mode
The weight data is periodically output. When the PRINT key is pressed, the balance starts to output the weight data at a preset interval time. When the PRINT key is pressed again, the balance stops outputting the weight data.

Required setting
\[ dout \quad Prt \quad d \]
Interval output mode
\[ dout \quad int \]
Interval time
Example
“For outputting the weight data periodically.”

Caution
The balance may not transmit the data completely at the specified interval times and baud rate. Set the baud rate higher.

9-6 Description of the Item “Data Format”

A&D standard format
This format is used when the peripheral equipment can receive the A&D format. If an AD-8121B is used, set the printer to MODE 1 or 2.

- This format consists of fifteen characters excluding the terminator.
- A header of two characters indicates the balance condition.
- The polarity sign is placed before the data with the leading zeros. If the data is zero, the plus sign is used.
- The unit, consisting of three characters, follows the data.

```
ST, +0001.278 ct CR LF
```

```
S T Stable header
```
```
U S Unstable header
```
```
OL Overload header
```

DP (Dump print) format
This format is used when the peripheral equipment cannot receive the A&D format. If an AD-8121B is used, set the printer to MODE 3.

- This format consists of sixteen characters excluding the terminator.
- A header of two characters indicates the balance condition. No overload header is used.
- The polarity sign is placed before the data, with spaces in place of leading zeros, if the data is not zero or overloaded.
- The unit, consisting of three characters, follows the data.

```
WT...+1.278 ct CR LF
```

```
WT Stable header
```
```
US Unstable header
```
```
QT Stable header (Counting mode)
```
```
OL Overload header
```
**KF format**  
51F TYPE 2

This is the Karl-Fischer moisture meter format and is used when the peripheral equipment can only communicate using this format.

- This format consists of fourteen characters excluding the terminator.
- This format has no header characters.
- The polarity sign is placed before the data, with spaces in place of leading zeros, if the data is not zero or overloaded.
- This format outputs the unit only for a stable value.

```
+ 1.278 CR LF
```

**MT format**  
51F TYPE 3

- A header of two characters indicates the balance condition.
- The polarity sign is used only for negative data.
- The weight data uses spaces in place of the leading zeros.
- The character length of this format changes dependent upon the unit

```
S  +0 1.278 CR LF
```

**NU (numerical) format**  
51F TYPE 4

This format outputs only numerical data.

- This format consists of nine characters excluding the terminator.
- The polarity sign is placed before the data with the leading zeros. If the data is zero, the plus sign is used.

```
+ 0 1.278 CR LF
```

**CSV format**  
51F TYPE 5

- Separates the data of A&D standard format and the unit by a comma (,).
- Outputs the unit even when the data is overloaded.

```
ST,0001.278, c t<CR><LF>  
```

```
ST, 0001.278, c t CR LF
```

```
OL, 9 9 9 9 9 9 9 E +19, c t CR LF
```

A unit or mode can be selected and stored in the function table as described on page 38. If a weighing mode (or unit of weight) has been turned off, that mode or unit will be missing in the sequence. Tael has four varieties, one of which can be selected and installed at the factory.

For details about the units and modes, see the table below:
The tables below indicate the weighing capacity and the minimum display for each unit, depending on the balance model.

</table>
9-9 Storing Units

The units or modes can be selected and stored in the function table. The sequence of displaying the units or modes can be arranged in the function table so as to fit the frequency of use.

Select a unit or mode and arrange the sequence of display as follows:

1. Press and hold the SAMPLE key until \( bA5Fnc \) of the function table is displayed.
2. Press the SAMPLE key several times to display \( Un \ i.t \).
3. Press the PRINT key to enter the unit selection mode.
4. Specify a unit or mode in the order to be displayed using the following keys.
   - SAMPLE key: To sequentially display the units.
   - RE-ZERO key: To specify a unit or mode. The stabilization indicator appears when the displayed unit or mode is specified.
5. Press the PRINT key to store the units or modes. The balance displays \( End \) and then displays the next menu of the function table.
6. Press the CAL key to exit the function table. Then the balance returns to the weighing mode with the unit specified first in step 4.

Notes
When the power is turned on, the scale displays the unit specified first in step 4.

In the weighing mode, to select a unit or mode for weighing, press the MODE key.
9-10 Counting Mode (PCS)

This is the mode to determine the number of objects in a sample based on the standard sample unit mass. The unit mass is the mass of one piece of the sample. The smaller the variables in each sample unit mass are, the more accurate the counting will be. The FZ-CT/GD and FX-CT/GD series balances are equipped with the Automatic Counting Accuracy Improvement (ACAI) function to improve the counting accuracy.

Notes
If the sample unit mass variable is too large, it may cause a counting error.

To use this mode, storing the counting mode (PCS) as described in “9-9 Storing Units” is required.

Selecting the counting mode
1 Press the MODE key to select PCS (counting mode).

Note
If PCS is not displayed, store the counting mode (PCS) as described in “9-9 Storing Units”.

Storing a sample unit mass
2 Press the SAMPLE key to enter the sample unit mass storing mode.
   Even in the storing mode, pressing the MODE key will switch to the next mode.
3 To select the number of samples, press the SAMPLE key several times. It may be set to 5, 10, 25, 50 or 100.

Note
A greater number of samples will yield more accurate counting result.

4 Place a container on the weighing pan, if necessary. Press the RE-ZERO key to cancel the weight (tare). The number specified in step 3 appears.
   e.g.: 25.0 is displayed if 25 is selected in step 3.
5 Place the number of samples specified on the pan. In this example, 25 pieces.
6 Wait for the stabilization indicator to come on. Press the PRINT key to calculate and store the unit mass. The balance displays 25 – – (counting mode) and is set to count samples with this unit mass. (The sample unit mass stored, even if the AC adapter is removed, is maintained in non-volatile memory.)
   To improve the accuracy of the unit mass, proceed to step 8.
Notes
If the balance judges that the mass of the samples is too light and is not adequate to be used as the unit mass, it displays \[ \text{Lo} \]. In that case, store the mass by some quantity. For example, when the model with the minimum weighing value of 0.01 g is used and 10 pieces of samples weigh 0.05 g. Store 100 pieces of samples as 10 and multiply the weighing result by 10.

If the balance judges that the mass of the samples is too light to acquire accurate weighing, it displays an error requiring the addition of more samples to the specified number. In the example above, \[ 50 - \text{PCS} \] appears, requiring 25 more samples. Add 25 samples and press the PRINT key. When the unit mass is stored correctly, the balance proceeds to the counting mode.

Counting operation
7 Place the samples to be counted on the pan. While the stabilization indicator is on, pressing the PRINT key will output the weight value, using the RS-232C serial interface.

Note
Peripheral equipment, that is sold separately, such as a printer or a personal computer is required.

Counting mode using the ACAI function
The ACAI is a function that improves the accuracy of the unit mass automatically by increasing the number of samples and averaging the unit mass variable to minimize the weighing error, as the counting process proceeds.

8 If a few more samples are added, the processing indicator turns on. To prevent an error, add three or more. The processing indicator does not turn on if overloaded. Try to add the same number of samples as displayed.

9 The balance re-calculates the unit mass while the processing indicator is blinking. Do not touch the balance or samples on the pan until the processing indicator turns off.

10 Counting accuracy is improved when the processing indicator turns off. Each time the above operation is performed, a more accurate unit mass will be obtained. There is no definite upper limit of ACAI range for the number of samples exceeding 100. Try to add the same number of samples as displayed.

11 Remove all the samples used in ACAI and proceed with the counting operation using the improved unit mass.
9-11 Percent Mode (%)

This is the mode to display the weight value in percentage compared to a 100% reference mass and is used for target weighing or checking the sample variable.

Note
To use this mode, storing the percent mode (%) as described in “9-9 Storing Units” is required.

Selecting the percent mode
1. Press the MODE key to select % (percent mode).

Note
If % is not displayed, store the percent mode (%) as described in “9-9 Storing Units”.

Storing the 100% reference mass
2. Press the SAMPLE key to enter the 100% reference mass storing mode.
   
   Even in the storing mode, pressing the MODE key will switch to the next mode.

3. Place a container on the weighing pan, if necessary. Press the RE-ZERO key to cancel the weight (tare). The balance displays 100.00 %.

4. Place the sample to be set as the 100% reference mass on the pan or in the container.

5. Press the PRINT key to store the reference mass. The balance displays 100.00 %. (The decimal point position depends on the reference value. The reference mass stored, even if the AC adapter is removed, is maintained in non-volatile memory.)

Note
If the balance judges that the mass of the sample is too light to be used as a reference, it displays Lo. Do not use the sample.

6. Remove the sample.

Reading the percentage
7. Place a sample to be compared to the reference mass on the pan. The displayed percentage is based on the 100% reference mass.
   
   While the stabilization indicator is on, pressing the PRINT key will output the weight value, using the RS-232C serial interface.

Note
Peripheral equipment, that is sold separately, such as a printer or a personal computer is required.
9-12 Description of the Item “Application Function”

**Capacity indicator (APF 1)**
In the weighing mode, the indicator displays the weight data relative to the weighing capacity in percentage. (Zero = 0%, maximum capacity = 100%)

**Statistical calculation mode (APF 2)**
The mode statistically calculates the weight data, and displays or outputs the results. For details, refer to “9-13 Statistical Calculation Mode”.
9-13 Statistical Calculation Mode

The statistical calculation mode statistically calculates the weight data, and displays or outputs the results. To use the statistical calculation mode, set the “Application function (\text{apf})” parameter of “Application (\text{ap fnc})” in the function table to “2”, as described below.

Statistical items available are number of data, sum, maximum, minimum, range (maximum-minimum), average, standard deviation and coefficient of variation. What statistical items to output can be selected from the three modes in the function table.

- The wrong data input can be canceled by the key operation, if immediately after the input.
- Turning the balance off will delete the statistical data.
- The standard deviation and coefficient of variation are obtained by the equation below:

\[
\text{Standard deviation} = \sqrt{\frac{N \cdot \sum (X_i - \bar{X})^2}{N(N-1)}} \quad \text{where } X_i \text{ is the } i\text{-th weight data,} \\
\text{N is number of data.}
\]

\[
\text{Coefficient of variation (CV)} = \frac{\text{Standard deviation}}{\text{Average}} \times 100 \% 
\]

9-13-1 Getting Started

Switching to the Statistical Function Mode (Changing The Function Table)

1. Press and hold the \text{SAMPLE} key until \text{bRFnc} of the function table is displayed, then release the key.
2. Press the \text{SAMPLE} key several times to display \text{RFnc}.
3. Press the \text{PRINT} key to display \text{RF 0}.
4. Press the \text{RE-ZERO} key to display \text{RF 2}.

To select statistical items to output, go to step 5.
To store the statistical function mode setting, go to step 7.
To disable the statistical calculation mode, press the \text{RE-ZERO} key to select \text{RF 0}.
Selecting the statistical items to output

5. Press the **SAMPLE** key to display **STAF 0**.

6. Press the **RE-ZERO** key to select the output items.
   In the example, **STAF 1** is selected to output the number of data, sum, maximum, minimum, range (maximum-minimum) and average.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Number of data, sum</td>
</tr>
<tr>
<td>1</td>
<td>Number of data, sum, Maximum, minimum, range (maximum − minimum), average</td>
</tr>
<tr>
<td>2</td>
<td>Number of data, sum, Maximum, minimum, range (maximum − minimum), average, Standard deviation, coefficient of variation</td>
</tr>
</tbody>
</table>

7. Press the **PRINT** key to store the setting.

Note
The statistical calculation mode will be enabled using the **ON:OFF** key or when the power is turned on.

8. Press the **CAL** key to return to the weighing mode.

Selecting the unit

9. Press the **MODE** key to select the unit to be used for the statistical calculation mode.

Notes
If the unit to be used is not displayed, store the unit as described in “9-9 Storing Units”.

Selecting the unit using the **MODE** key is not available after the data is entered. In this case, clear the data as described on page 46 and select the unit using the **MODE** key.

When the unit used for the statistical calculation mode is to be enabled upon power-on, select the unit in “Unit (Unit)” of the function table beforehand.

9-13-2 Using The Statistical Calculation Mode

Entering data for statistical calculation

Use the following keys to operate the statistical calculation mode.

- **MODE** key ............. When the data is entered, moves between the displaying items (weighing mode, statistical results and data operation) each time the key is pressed.
- **SAMPLE** key .......... When no data has been entered, selects the unit.
- **RE-ZERO** key .......... Turns the minimum weighing value on or off, in the weighing mode.
- **PRINT** key ............. **Outputs the data number and the weight data and includes the weight data to statistical calculation in the weighing mode. (Output is not in the data format specified in the function table because of the data number added.)**
- **CAL** key ............... Returns to the weighing mode.
1  Press the [RE-ZERO] key to set the display to zero.

2  Place the sample on the weighing pan and wait for the stabilization indicator to turn on.

3  Press the [PRINT] key to add the data displayed to statistical calculation. The number of data on the upper left of the display increases by 1.

4  Repeat steps 1 to 3 for each weighing.

Outputting the statistical results

5  Each time the [MODE] key is pressed, the display changes: the results as selected in “Statistical function mode output items (5st AF), [CANCEL] and [CLEAR].

Notes
When the number of data is 1, the standard deviation and coefficient of variation are displayed as ---- ----.
When the average is 0, the coefficient of variation is displayed as ---- ----.
Statistical items are indicated on the upper left of the display using the following symbols.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Statistical item</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUM</td>
<td>Sum</td>
</tr>
<tr>
<td>MAX</td>
<td>Maximum</td>
</tr>
<tr>
<td>MIN</td>
<td>Minimum</td>
</tr>
<tr>
<td>R</td>
<td>Range (Maximum – minimum)</td>
</tr>
<tr>
<td>AVE</td>
<td>Average</td>
</tr>
<tr>
<td>SD</td>
<td>Standard deviation</td>
</tr>
<tr>
<td>CV</td>
<td>Coefficient of variation</td>
</tr>
</tbody>
</table>

6  While the results are displayed, press the [PRINT] key to output the results.
Deleting the latest data

When the wrong data is entered, it can be deleted and excluded from statistical calculation. Only the latest data can be deleted.

1. In the weighing mode, press the MODE key, and then press the SAMPLE key several times to display **CANCEL**.

2. Press the PRINT key to display **CAN no**.

3. Press the RE-ZERO key to display **CAN Go**.

4. Press the PRINT key to delete the latest data and exclude it from statistical calculation. The number of data decreases by 1 when the balance returns to the weighing mode.

Clearing the statistical data

All the statistical data will be deleted and the number of data will be 0 (zero).

1. In the weighing mode, press the MODE key, and then press the SAMPLE key several times to display **CLRr**.

2. Press the PRINT key to display **CLR no**.

3. Press the RE-ZERO key to display **CLR Go**.

4. Press the PRINT key to delete the statistical data. The number of data becomes 0 (zero) when the balance returns to the weighing mode.
9-14 Comparator Function

The results of the comparison are indicated by [HI] [OK] [LO] on the display.

Operating conditions:
- No comparison
- Comparison when the weight data is stable or overloaded, excluding “near zero”
- Comparison when the weight data is stable or overloaded, including “near zero”
- Continuous comparison, excluding “near zero”
- Continuous comparison, including “near zero”

To compare, use:
- Upper limit value and lower limit value
- Digital input

Input method:
- Digital input

Note
"Near zero" means that the weight value is within $\pm 10$ digits of the minimum weighing value.

For example, using an FX-3000GD in gram mode, the range of $\pm 0.10$ g is “near zero”.

For the description of “Comparator (Cp fnc)”, refer to “9-3 Details of the Function Table”.

Setting example
(Continuous comparison, excluding “near zero”, upper limit and lower limit values, digital input)

Selecting a comparator mode
1. Press and hold the SAMPLE key until $b\text{A5fnc}$ of the function table is displayed.
2. Press the SAMPLE key several times to display $b\text{P fnc}$.
3. Press the PRINT key.
4. Press the RE-ZERO key several times to display $b\text{P 3}$.
5. Press the PRINT key to store the selected mode.

Entering the upper limit value
6. With $b\text{P Hi}$ displayed, press the PRINT key. The current setting of the upper limit value is displayed with all the digits blinking.
   - When the current setting is not to be changed, press the PRINT or CAL key to proceed to step 7.
   - When the current setting is to be changed, press the RE-ZERO key. Change the setting using the following keys.
     
     | Key     | Description                      |
     |---------|----------------------------------|
     | SAMPLE  | To select the digit to change the value. |
     | RE-ZERO | To change the value of the digit selected. |
     | MODE    | To switch the polarity.           |
     | PRINT   | To store the new setting and go to step 7. |
     | CAL     | To cancel the new setting and go to step 7. |

Entering the lower limit value
7. With $b\text{P Lo}$ displayed, press the PRINT key. The current setting of the lower limit value is displayed with all the digits blinking.
   - When the current setting is not to be changed, press the PRINT or CAL key to proceed to step 8.
   - When the current setting is to be changed, press the RE-ZERO key. Change the setting using the following keys.
     
     | Key     | Description                      |
     |---------|----------------------------------|
     | SAMPLE  | To select the digit to change the value. |
     | RE-ZERO | To change the value of the digit selected. |
     | MODE    | To switch the polarity.           |
     | PRINT   | To store the new setting and go to step 8. |
     | CAL     | To cancel the new setting and go to step 8. |

8. Press the CAL key to exit the comparator function and return to the weighing mode.
9-15 Clock and Calendar Function (Only for the FZ-CT/FZ-GD series)

The FZ-CT/FZ-GD series balances is equipped with a clock and calendar function. The FX-CT/FX-GD series does not have this function. When the "GLP output (info)" parameter is set to "1" or "2" and the "Time/Date output (5-td)" parameter is set to "1", "2" or "3", the time and date are added to the output data. Set or confirm the time and date as follows:

Operation

1. Press and hold the SAMPLE key until the function table is displayed.
2. Press the SAMPLE key several times to display Cl Adj.
3. Press the PRINT key. The balance enters the mode to confirm or set the time and date.

Confirming the date

4. The current date is displayed with all the digits blinking.
   - When the date is correct and the operation is to be finished, press the CAL key and proceed to step 8.
   - When the time is to be confirmed, press the SAMPLE key and proceed to step 6.
   - When the date is not correct and is to be changed, press the RE-ZERO key and proceed to step 5.

Note

The year is expressed using a two-digit format. For example, the year 2000 is expressed as “00”.

Setting the date (with part of the digits blinking)

5. Set the date using the following keys.
   - SAMPLE key To select the digits to change the value. The selected digits blink.
   - RE-ZERO key To increase the value by one.
   - MODE key To decrease the value by one.
   - PRINT key To store the new setting, display End and go to step 6.
   - CAL key To cancel the new setting and go to step 6.
Confirming the time

6 The current time is displayed with all the digits blinking.
   - When the time is correct and the date does not need to be confirmed, press the **CAL** key and proceed to step 8.
   - When the time is correct and the date is to be confirmed, press the **SAMPLE** key and proceed to step 4.
   - When the time is not correct and is to be changed, press the **RE-ZERO** key and proceed to step 7.

Setting the time (with part of the digits blinking)

7 Set the time in 24-hour format using the following keys.
   - **SAMPLE** key: To select the digits to change the value. The selected digits blink.
   - **RE-ZERO** key: To increase the value by one.
   - **MODE** key: To decrease the value by one.
   - **PRINT** key: To store the new setting, display **End** and go to step 8.
   - **CAL** key: To cancel the new setting and go to step 8.

Quitting the operation

8 The balance displays the next menu of the function table. Press the **CAL** key to exit the clock and calendar function and return to the weighing mode.

Notes

- Do not enter invalid values such as a non-existing date when setting the time and date.
- When the clock backup battery has been depleted, the balance displays **rtc PF**. Under this condition, press any key and set the time and date. The dead battery only affects the clock and calendar function. Even so, the function works normally as long as the AC adapter is connected to the balance.
10. ID NUMBER AND GLP REPORT

- The ID number is used to identify the balance when Good Laboratory Practice (GLP) is used.
- The ID number is maintained in non-volatile memory even if the AC adapter is removed.
- The GLP output format is selected at “GLP output \( (\text{INFO}) \)” of the function table and can be output to a personal computer or printer using the RS-232C serial interface.
- The GLP output format includes the balance manufacturer, model, serial number, ID number and space for signature for weight data, and the weight used and results for calibration or calibration test data.

When the AD-8121B is used, the date and time can be printed using the AD-8121B clock and calendar function. In this case, set the “GLP output \( (\text{INFO}) \)” parameter to “1”.
- The balance can output the following reports for GLP.
  - “Calibration report” of the calibration, using an external weight.
  - “Calibration test report” of the calibration test, using an external weight.
  - “Title block” and “End block” for the weight data.

10-1 Setting the ID Number

1. Press and hold the \( \text{SAMPLE} \) key until \( \text{BASFC} \) of the function table is displayed.
2. Press the \( \text{SAMPLE} \) key several times to display \( \text{id} \).
3. Press the \( \text{PRINT} \) key. Set the ID number using the following keys.
   - \( \text{SAMPLE} \) key To select the digit to change the value.
   - \( \text{RE-ZERO} \) key To set the character of the digit selected. Refer to the display character set shown below.
   - \( \text{PRINT} \) key To store the new ID number and display \( \text{RPFC} \).
   - \( \text{CAL} \) key To cancel the new ID number and display \( \text{RPFC} \).
4. Press the \( \text{CAL} \) key to return to the weighing mode.

Display character set

10-2 GLP Report

Set the following parameters to output the report.
- To print the report, set the “GLP output \( (\text{INFO}) \)” parameter to “1” and use MODE 3 of the AD-8121B. For details on using the printer, refer to “14-1 Connection to the AD-8121B Printer”. If the time and date are not correct, adjust the AD-8121B clock and calendar.
- To output the report to a personal computer using the RS-232C serial interface, set the “GLP output \( (\text{INFO}) \)” parameter to “2”.

Note

For operational details about calibration and calibration test, refer to “7. CALIBRATION”.

Title block and end block
When a weight value is recorded as the GLP data, “Title block” and “End block” are inserted at the beginning and at the end of a group of weight values, in the GLP report.

Note
To output the report to an AD-8121B, use MODE 3 of the AD-8121B.

Operation
1. With the weight data displayed, press and hold the PRINT key until Start is displayed. The “Title block” is output.
2. The weight data is output according to the parameter setting of the data output mode.
3. Press and hold the PRINT key until Recend is displayed. The “End block” is output.

11. UNDERHOOK

The underhook can be used for magnetic materials or density measurement. The built-in underhook is revealed by removing the plastic cap on the bottom of the balance. Use the underhook as shown below.

Caution
Do not apply excessive force to the underhook. When not in use, attach the plastic cap to prevent dust from getting into the balance.
12. PROGRAMMABLE-UNIT

This is a programmable unit conversion function. It multiplies the weight data in grams by an arbitrary coefficient set in the function table and displays the result.

The coefficient must be within the range between the minimum and maximum shown below. If the coefficient set is beyond the range, an error is displayed and the balance returns to the coefficient setting mode, prompting to enter an appropriate value. A coefficient of 1 was set at the factory.

<table>
<thead>
<tr>
<th>Model</th>
<th>Minimum coefficient</th>
<th>Maximum coefficient</th>

<tr>
<td>FX-1200GD /2000GD /3000GD</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Operation**

1. Press and hold the **SAMPLE** key until \textit{Func} of the function table is displayed.
2. Press the **SAMPLE** key several times to display \textit{mlt}.
3. Press the **PRINT** key. The balance enters the mode to confirm or set the coefficient.

**Confirming the coefficient**

4. The current coefficient is displayed with the first digit blinking.
   - When it is not to be changed, press the **CAL** key and proceed to step 6.
   - When it is to be changed, press the **RE-ZERO** key and proceed to step 5.

**Setting the coefficient**

5. Set the coefficient using the following keys.
   - **SAMPLE** key: To select a digit to change the value. The selected digit blinks.
   - **RE-ZERO** key: To change the value.
   - **MODE** key: To change the decimal point position.

   Each time the switch is pressed, the decimal point position changes as follows:
   \[ 0.000001 \rightarrow 00.00001 \rightarrow \ldots \rightarrow 000000.1 \rightarrow 0000001 \]

   - **PRINT** key: To store the new setting, display \textit{End} and go to step 6.
   - **CAL** key: To cancel the new setting and go to step 6.

**Quitting the operation**

6. The balance displays \textit{Unit}. Press the **CAL** key to exit the programmable-unit function and return to the weighing mode.

**Using the function**

Press the **MODE** key to select the programmable-unit (no display on the unit section). Perform weighing as described in “5-4 Basic Operation (FZ-GD / FX-GD Series Balances)”. After weighing, the balance displays the result (weight data in grams x coefficient).
### 13. RS-232C Serial Interface

The balance is a Data Communication Equipment (DCE) device. Connect the balance to a personal computer (DTE) using a straight through cable.

Transmission system: EIA RS-232C (D-Sub 9-pin, female connector)
Transmission form: Asynchronous, bi-directional, half duplex
Transmission rate: 20 times/second, 10 times/second or 5 times/second (same as data refresh rate)
Data format: Baud rate: 600, 1200, 2400, 4800, 9600, 19200 bps
Data bits: 7 or 8 bits
Parity: Even, Odd (Data bits 7 bits) None (Data bits 8 bits)
Stop bit: 1 bit
Code: ASCII

#### D-Sub 9-pin assignments

14. CONNECTION TO PERIPHERAL EQUIPMENT

14-1 Connection to the AD-8121B Printer

Set the following parameters to use the AD-8121B printer.

Example of use | AD-8121B mode setting
--- | ---
To print A&D standard format weight data, using the FZ-CT/GD, FX-CT/GD PRINT key or FZ-CT/GD, FX-CT/GD auto print mode. (The time and date can be added.) | MODE 1
To print A&D standard format weight data, using the AD-8121B DATA key or AD-8121B built-in timer. (The time and date can be added.) To print, using the AD-8121B chart printing function. | MODE 2
To print the FZ-CT/GD, FX-CT/GD statistical data. | MODE 3
To print GLP output. | MODE 3

<table>
<thead>

</tbody>
</table>

Set the DIP switch No.4 to OFF.
14-2 Connection to a Computer

The FZ-CT/GD and FX-CT/GD series balances can be connected to a personal computer using the RS-232C serial interface. As an option, the FX-i-02 USB interface is available to transmit the balance data to a personal computer.

The FZ-CT/GD and FX-CT/GD series balances are a DCE. Use a straight through cable. If purchasing the RS-232C cable on the market, check the interface connections and type.

14-3 Using Windows Communication Tools (WinCT)

When Windows is used as an operating system in a personal computer, the WinCT software, that is downloaded from the A&D website, can be used to transmit the weight data to the personal computer.

The WinCT has three communication methods: "RsCom", "RsKey" and "RsWeight".

RsCom

- Can transmit commands to control the balance.
- Can make bi-directional communication between the balance and a personal computer using the RS-232C serial interface.
- Can display or store the data using a text file format. Can also print the data using a printer connected to the personal computer.
- When several ports of a personal computer have balances connected, can communicate with each balance simultaneously.
- Can share a personal computer with other application software.

RsKey

- Can transmit the weight data output from the balance directly to other application software such as Microsoft Excel.
- Can be used with most application software.
RsWeight

- Can retrieve the weight data from the balance and display it in graph form in real-time.
- Can calculate and display the maximum, minimum, average, standard deviation and coefficient of variation values of data.

Using the WinCT software, the balance can do the following:

1. Analyzing the weight data and the statistics with "RsKey"
   The weight data can be input directly into an Excel worksheet. Then, Excel can analyze the data to obtain sum, average, standard deviation, maximum and minimum value, and display them in a graph.

2. Controlling the balance using commands from a personal computer
   By using "RsCom", the personal computer sends commands such as “re-zero” or “send weight data” to the balance and controls the balance.

3. Printing the balance GLP report using your printer
   The balance GLP report can be printed using a printer connected to the personal computer.

4. Receiving weight data at a certain interval
   The weight data can be received at a certain interval and data characteristic with elapsed time can be obtained.

5. Using a personal computer as an external indicator
   With the “RsKey” test mode function, a personal computer can be used as an external weight indicator for the balance. (To do this, set the balance data output mode to stream mode.)
15. COMMANDS

15-1 Command List

Note
A command has a terminator added, that is specified using the "Terminator (CRLF)" parameter of “Serial interface (5, 6)” in the function table, and is sent to the balance.

Commands to query weight data

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td>Cancels the S or SIR command.</td>
</tr>
<tr>
<td>Q</td>
<td>Requests the weight data immediately.</td>
</tr>
<tr>
<td>S</td>
<td>Requests the weight data when stabilized.</td>
</tr>
<tr>
<td>SI</td>
<td>Requests the weight data immediately.</td>
</tr>
<tr>
<td>SIR</td>
<td>Requests the weight data continuously.</td>
</tr>
<tr>
<td>E_{SC}P</td>
<td>Requests the weight data when stabilized.</td>
</tr>
</tbody>
</table>

Note: The “Q” and “SI” commands, the “S” and “E_{SC}P” commands behave the same.

Commands to control the balance

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>

<td>Changes the tare weight. The unit added is the current weighing unit in A&amp;D standard format.</td>
</tr>
</tbody>
</table>

Note: The “R”, “Z” and “E_{SC}T” commands behave the same.

E_{SC} : ASCII code 1Bh
15-2 Acknowledge Code and Error Codes

When the "AK, Error code (ErCd)" parameter of "Serial interface (Sif)" is set to "1", the balance outputs <AK> code or an error code for each command as follows:

<AK> (06h) Acknowledge in ASCII code.

- When the balance receives a command to request data and can not process it, the balance transmits an error code (EC, Exx).
- When the balance receives a command to request data and can process it, the balance outputs the data.

- When the balance receives a command to control the balance and can not process it, the balance transmits an error code (EC, Exx).
- When the balance receives a command to control the balance and can process it, the balance transmits the acknowledge code.

Among commands to control the balance, the following transmit the acknowledge code both when the balance receives the command and when the balance has accomplished the command. If the command can not be processed properly, the balance transmits an error code (EC, Exx). This error can be released using the CAL command.

CAL command (Calibration command)  ON command (Display ON command)
P command (Display ON/OFF command)  R command (RE-ZERO command)

R command example
When a communication error has occurred due to external noise, or a parity error has occurred due to transmission error, the balance transmits an error code. In this case, send the command again.

15-3 Settings Related to RS-232C

Concerning the RS-232C, the balance has two functions: “Data output (dout)” and “Serial interface (sif)”. Set each function as necessary.
16. MAINTENANCE

- Do not use organic solvents to clean the balance. Clean the balance with a lint free cloth that is moistened with warm water and a mild detergent.
- Do not disassemble the balance. Contact the local A&D dealer if the balance needs service or repair.
- Use the original packing material for transportation.
17. TROUBLESHOOTING

17-1 Checking the Balance Performance and Environment

The balance is a precision instrument. When the operating environment or the operating method is inadequate, correct weighing cannot be performed. Place a sample on the pan and remove it, and repeat this several times. If the balance seems to have a problem with repeatability or to perform improperly, check as described below. If improper performance persists after checking, contact the local A&D dealer for repair.

Checking that the balance performs properly

- Check the balance repeatability using an external weight. Be sure to place the weight in the center of the weighing pan.
- Check the balance repeatability, linearity and calibrated value using external weights with a known value.

Checking that the operating environment or weighing method is proper

Operating environment

- Is the weighing table solid enough (especially for the FZ-300CT/600CT/120GD/200GD/300GD and FX-300CT/600CT/120GD/200GD/300GD)?
- Is the balance level? Refer to “3-1 Before Use”.
- Is the operating environment free from vibration and drafts? For the FZ-300CT/600CT/120GD/200GD/300GD and FX-300CT/600CT/120GD/200GD/300GD, has the breeze break been installed?
- Is there a strong electrical or magnetic noise source such as a motor near the balance?

Weighing method

- Is the weighing pan installed correctly?
- Is the RE-ZERO key pressed before placing a sample on the weighing pan?
- Is the sample placed in the center of the weighing pan?
- Has the balance been calibrated using an external weight?
- Has the balance been warmed up for 30 minutes before weighing?

Sample and container

- Has the sample absorbed or lost moisture due to the ambient conditions such as temperature and humidity?
- Has the temperature of the container been allowed to equalize to the ambient temperature? Refer to “3-2 During Use”.
- Is the sample charged with static electricity? Refer to “3-2 During Use”.
  The FZ-300CT/600CT/120GD/200GD/300GD and FX-300CT/600CT/120GD/200GD/300GD are prone to be charged with static electricity when the relative humidity is low.
- Is the sample of magnetic material such as iron? Caution is required for weighing magnetic materials. Refer to “3-2 During Use”
## 17-2 Error Codes

<table>
<thead>
<tr>
<th>Display</th>
<th>Error code</th>
<th>Description</th>
</tr>
</thead>
</table>
| ![Error](Error1.png) | EC, E11 | Stability error  
The balance cannot stabilize due to an environmental problem. Prevent vibration, drafts, temperature changes, static electricity and magnetic fields.  
Refer to “3. PRECAUTIONS” for details on the operating environment and “6. RESPONSE ADJUSTMENT” about adapting the balance to the environment.  
To return to the weighing mode, press the **CAL** key. |
| ![Error](Error2.png) | Out of range error | The value entered is beyond the settable range.  
Re-enter the value. |
| ![CAL E](CAL E.png) | EC, E20 | Calibration weight error  
The calibration weight is too heavy.  
Confirm that the weighing pan is properly installed.  
Confirm the calibration weight value.  
Press the **CAL** key to return to the weighing mode. |
| ![CAL E](CAL E.png) | EC, E21 | Calibration weight error  
The calibration weight is too light.  
Confirm that the weighing pan is properly installed.  
Confirm the calibration weight value.  
Press the **CAL** key to return to the weighing mode. |
| ![E](E.png) | Overload error | A sample beyond the balance weighing capacity has been placed on the pan.  
Remove the sample from the pan. |
| ![E](E.png) | Weighing pan Error | The weight value is too light.  
Confirm that the weighing pan is properly installed and calibrate the balance. |
| ![Lo](Lo.png) | Sample mass error | The balance cannot store the sample for the counting mode or for the percent mode because it is too light.  
Use a sample that is heavier. |
| ![25 - PCS](25 - PCS.png) | ![50 - PCS](50 - PCS.png) | ![100 - PCS](100 - PCS.png) | Unit mass error  
The sample unit mass for the counting mode is too light. Storing and using it for counting will cause a counting error.  
Add samples to reach the specified number and press the **PRINT** key.  
Pressing the **PRINT** key without adding samples will shift the balance to the counting mode. But, to acquire accurate weighing, be sure to add samples. |
<table>

<th>Display</th>
<th>Error code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EC, E00</td>
<td>Communications error</td>
<td>A protocol error occurred in communications. Confirm the format, baud rate and parity.</td>
</tr>
<tr>
<td>EC, E01</td>
<td>Undefined command error</td>
<td>An undefined command was received. Confirm the command.</td>
</tr>
</tbody>
</table>
| EC, E02 | Not ready | A received command can not be processed. 
  e.g. The balance received a \( Q \) command, but not in the weighing mode. 
  e.g. The balance received a \( Q \) command while processing a \( \text{RE-ZERO} \) command. Adjust the delay time to transmit a command. |
| EC, E03 | Timeout error | If the timeout parameter is set to "\( t \) - \( r \) \( \text{UP} \) \( l \)" , the balance did not receive the next character of a command within the time limit of one second. Confirm the communication. |
| EC, E04 | Excess characters error | The balance received excessive characters in a command. Confirm the command. |
| EC, E06 | Format error | A command includes incorrect data. 
  e.g. The data is numerically incorrect. Confirm the command. |
| EC, E07 | Parameter setting error | The received data exceeds the range that the balance can accept. Confirm the parameter range of the command. |
| Other errors | | If the errors described above can not be released or other errors are displayed, contact the local A&D dealer. |

### 17-3 Asking For Repair

If the balance needs service or repair, contact the local A&D dealer.

The balance is a precision instrument. Use much care when handling the balance and observe the following when transporting the balance.

- Use the original packing material.
- Remove the weighing pan from the main unit
18. OPTIONS

Note
The FXi-02, FXi-08 and FXi-09 can not be used at the same time.

FXi-02 USB interface (Installed in the balance, Applicable OS: Windows 98 OSR2 or later)

- Used to transmit the balance weight data (numerical value only) uni-directionally to a personal computer via USB.
- Can transmit the balance weight data (numerical value only) directly to other application software such as Microsoft Excel, Word and memo pad.
- Driver installation is not necessary.
- Use the USB converter (AX-USB-9P) to perform bi-directional communication using the WinCT or to output the statistical results or GLP report to a personal computer.

FXi-08 Ethernet interface

- Used to connect the balance to a LAN.
- The "WinCT-Plus" data communication software is provided as an accessory and can perform the following.
  - Acquire data from multiple balances connected to a LAN.
  - Control these balances with commands.
  - Acquire data transmitted from balances.
    Example: When pressing the PRINT key of the balance, data is output and is acquired by the computer.
  - The stored data can be used with Microsoft Excel (if installed).

FXi-09 Built-in battery unit (Ni-MH rechargeable battery pack)

- Charging time: Approx. 10 hours
- Continuous operation hours: Approx. 8 hours

Note
The charging time varies depending on the operating conditions. The balance can not be used while the battery is being charged.
FXi-10 Small breeze break
- Provided for FZ-GD series (all models) and FX-120GD/200GD/300GD as standard. Can be used for all of the other models.

FXi-11 Large breeze break
- Provided for FZ-300CT/600CT and FX-300CT/600CT as standard. Breeze break with greater height. Can be used for all of the other models.

AX-FXi-31 Main unit cover
- Main unit protective cover provided as standard.

AX-CARAT PAN-WEX
- Two silver colored carat pans (the same as the carat pan provided as a standard accessory)

AX-CARAT PAN-BEX
- Two black carat pans (the same as the carat pan provided as a standard accessory)

AX-USB-9P-EX External USB converter
- Adds COM ports to a personal computer.
- Once a driver is installed, bi-directional communication is available.
- Even if the personal computer has no COM ports, serial communication software such as WinCT can be used via USB connection.

AD-1683 DC static eliminator
- Used to minimize weighing errors due to static electricity on the material.

AD-8920 Remote display
- Connected to the FZ-CT/GD and FX-CT/GD series balances using the RS-232C serial interface to display the weight data away from the balance.

AD-8922 Remote controller
- Connected to the FZ-CT/GD and FX-CT/GD series balances using the RS-232C serial interface to display the weight data and to remotely control the balance.
- Analog output and comparator output available as an option to be installed.

AD-8121B Printer
- Compact dot-matrix printer
- Statistical function, clock and calendar function, interval print function, graphic print function, dump print mode
- 5 x 7 dots, 16 characters per line
- Print paper (AX-PP143, 45 (W) x 50 (L) mm, ø65 mm)
- AC adapter or alkaline battery.

*1 To use the counting mode or the percent mode, storing each mode as described in “9-9 Storing Units” is required.

* - Accuracy right after calibration using the accessory small breeze break and the internal mass, in good ambient conditions (within the temperature range of 10°C to 30°C (50°F to 86°F) with no abrupt changes in temperature or humidity, no drafts, no vibration and no effect by magnetic fields or static electricity).

- With the FZ-CT series balance, the environment and passing age may cause internal mass value error. Calibrate using an external mass and perform maintenance.

*1 To use the counting mode or the percent mode, storing each mode as described in “9-9 Storing Units” is required.
20. EXTERNAL DIMENSIONS

FZ-300CT / 600CT
FX-300CT / 600CT

*: Height up to the weighing pan

Unit: mm
**FZ-120GD / 200GD / 300GD**

**FX-120GD / 200GD / 300GD**

* The FZ-1200GD / 2000GD / 3000GD have a small break breeze provided.

---

*1: Width of the opening when a clear plate is removed
*2: Inside dimension
*3: Weighing pan diameter
*4: Height from the weighing pan up to the cap of the breeze break (Inside dimension)
*5: Height of the opening when a clear plate is removed

---

**Unit: mm**
## 21. TERMS/INDEX

<table>
<thead>
<tr>
<th>Terms</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Stable value</strong></td>
<td>The weight data when the stabilization indicator appears.</td>
</tr>
<tr>
<td><strong>Environment</strong></td>
<td>Ambient conditions such as vibration, drafts, temperature, static electricity and magnetic fields which affect the weighing operation.</td>
</tr>
<tr>
<td><strong>Calibration</strong></td>
<td>Adjustment of the balance so that it can weigh accurately.</td>
</tr>
<tr>
<td><strong>Output</strong></td>
<td>To output the weight data using the RS-232C serial interface.</td>
</tr>
<tr>
<td><strong>Zero point</strong></td>
<td>A weighing reference point or the zero display. Usually refers to the value displayed when nothing is on the weighing pan.</td>
</tr>
<tr>
<td><strong>Digit</strong></td>
<td>Unit of digital resolution. Used for the balance, a unit of minimum weighing value.</td>
</tr>
<tr>
<td><strong>Tare</strong></td>
<td>To cancel the weight of a container which is not included in the weight data.</td>
</tr>
<tr>
<td><strong>Mode</strong></td>
<td>Balance operational function.</td>
</tr>
<tr>
<td><strong>Re-zero</strong></td>
<td>To set the display to zero.</td>
</tr>
<tr>
<td><strong>GLP</strong></td>
<td>Good Laboratory Practice.</td>
</tr>
<tr>
<td><strong>Repeatability</strong></td>
<td>Variation in measured values obtained when the same weight is placed and removed repetitively. Usually expressed as a standard deviation.</td>
</tr>
<tr>
<td></td>
<td>e.g. Standard deviation=1 digit: This means that measured values fall within ±1 digit in the frequency of about 68%.</td>
</tr>
<tr>
<td><strong>Stabilization time</strong></td>
<td>Time required after a sample being placed, until the stabilization indicator illuminates and the weight data is displayed.</td>
</tr>
<tr>
<td><strong>Sensitivity drift</strong></td>
<td>An affect that a change in temperature causes to the weight data. Expressed as temperature coefficient.</td>
</tr>
<tr>
<td></td>
<td>e.g. Temperature coefficient = 2 ppm/°C : If a load is 300 g and the temperature changes by 10°C, the value displayed changes by the following value.</td>
</tr>
<tr>
<td></td>
<td>0.0002%/°C x 10°C x 300 g = 6 mg</td>
</tr>
