1. INTRODUCTION

This manual describes how the FZ-i / FX-i series balance works and how to get the most out of it in terms of performance.

Read this manual thoroughly before using the balance and keep it at hand for future reference.

1-1 About This Manual

This manual consists of the following five parts:

Basic operation ...................... Describes precautions on handling the balance, balance construction and basic balance operation.
Adapting to the environment.... Describes response adjustment and calibration.
Functions .............................. Describes various functions of the balance.
RS-232C serial interface........... Describes the interface which transmits data and controls the balance.
Maintenance ......................... Describes maintenance, error codes, troubleshooting, specifications and options.

1-2 Features

- Compact general-purpose balance, can be installed almost anywhere.
- The FZ-i series balance is equipped with an internal mass for one-touch calibration.
- Casing construction, strong protection against dust and moisture.
- Stabilization time of one second. When [FAST] is selected for the response rate, a stabilization time of one second, to read a displayed value after a sample is placed on the pan, has been achieved.
- Multiple weighing units with most of the common units used around the world.
- Standard RS-232C serial interface to communicate with a computer and to output the Good Laboratory Practice (GLP) data
- Statistical calculation mode to statistically calculate the weight data, and display or output the sum, maximum, minimum, range (maximum-minimum), average, standard deviation and coefficient of variation.
- Comparator Indicators, displaying the comparison results.
- Hold Function, provided for weighing a moving object such as an animal.
- Breeze break, provided for the FX-120i/200i/300i/500i, for more accurate weighing.
- Underhook, provided for suspended weighing.
- As options, the USB interface (FXi-02), the Ethernet interface (FXi-08) and the built-in battery unit (FXi-09) are available.

Connecting the USB interface, by cable to a Windows computer, allows transmission of the weight data to Excel or Word. The Ethernet interface allows connection of the balance to a personal computer through a LAN. The battery unit allows use of the balance where a power source is not available.

- The AD-8920A remote display, that is sold separately, allows reading the weight value in a place away from the balance.
1-3 Compliance

Compliance with FCC Rules

Please note that this device generates, uses and can radiate radio frequency energy. This device has been tested and has been found to comply with the limits of a Class A computing device pursuant to Subpart J of Part 15 of FCC rules. These rules are designed to provide reasonable protection against interference when this device is operated in a commercial environment. If this unit is operated in a residential area, it may cause some interference and under these circumstances the user would be required to take, at his own expense, whatever measures are necessary to eliminate the interference.

(FCC = Federal Communications Commission in the U.S.A.)

Compliance With EMC Directives

This device features radio interference suppression and safety regulation in compliance with the following Council Directives:

Council directive 89/336/EEC EN61326 EMC directive
Council directive 73/23/EEC EN60950 Safety of Information Technology Equipment

The CE mark is an official mandatory European marking.

Please note that any electronic product must comply with local laws and regulations when sold or used anywhere outside Europe.
A & D Instruments Ltd. hereby declare that the **FZ-i series** conforms to the requirements of the council directives on...

*Electromagnetic Compatibility (EMC) 2004/108/EC and Low Voltage (LVD) 2006/95/EC*

provided that they bear the CE mark of conformity.

**Standards applicable:**
- EN 61326:2006
- Electrical equipment for measurement, control and laboratory use - EMC requirements. Minimum immunity test requirements

For the AC Adapter Models: TB-228E, TB-238U, TB-219(EPA-121DA-15), TB-124E and TB-124U:

**Standards applicable:**
- EN 60950-1, EN 61204-3, EN 55022, EN55024, EN 61000-3-2, EN61000-3-3

**CE Mark first applied March 2009**

...Clearly a Better Value
How to assemble the breeze break
(For the FZ-i series (all) and FX-120i/200i/300i/500i)
Assemble the breeze break as shown below. Follow the numbered sequence.

Note
Please confirm that the AC adapter type is correct for your local voltage and receptacle type.
2-2 Installing the Balance

Install the balance as follows:

1. Place the balance on a solid weighing table. Refer to “3. PRECAUTIONS” for installing the balance.

2. The FZ-i series (all) and FX-120i /200i /300i /500i
   Assemble the pan support, weighing pan and breeze break, on the balance as shown in the illustration on page 7.
   FX-1200i /2000i /3000i /5000i
   Assemble the pan support and weighing pan on the balance as shown in the illustration on page 7.

3. Adjust the leveling feet to level the balance. Confirm it using the bubble spirit level.

4. Confirm that the AC adapter type is correct for the local voltage and power receptacle type.

5. Connect the AC adapter to the balance. Warm up the balance for at least 30 minutes with nothing on the weighing pan.

Note
The AC adapter plug is protected against dust and may be difficult to insert. When inserting the plug, turn the plug while pushing on it.
3. PRECAUTIONS

To get the optimum performance from the balance and acquire accurate weight data, note the following:

3-1 Before Use

- Install the balance in an environment where the temperature and humidity are not excessive. The best operating temperature is about 20°C / 68°F at about 50% relative humidity.
- Install the balance where it is not exposed to direct sunlight and it is not affected by heaters or air conditioners.
- Install the balance where it is free of dust.
- Install the balance away from equipment which produces magnetic fields.
- Install the balance in a stable place avoiding vibration and shock. Corners of rooms on the first floor are best, as they are less prone to vibration.
- The weighing table should be solid and free from vibration, drafts and as level as possible.
- Level the balance by adjusting the leveling feet and confirm it using the bubble spirit level.
- Ensure a stable power source when using the AC adapter.
- Plug in the AC adapter and warm up the balance for at least 30 minutes.
- Calibrate the balance before use or after having moved it to another location.

Caution

Do not install the balance where flammable or corrosive gas is present.

3-2 During Use

- Discharge static electricity from the material to be weighed (hereinafter referred to as the sample). When a sample could have a static charge, the weight data is influenced. Ground the balance and try the following:
  - Eliminate static electricity using the optional AD-1683 DC static eliminator.
  - Try to keep the ambient humidity above 45%RH.
  - Use a metal shield case for a charged sample.
  - Wipe charged plastic samples with a moistened cloth.
• This balance uses a strong magnet as part of the balance assembly, so please use caution when weighing magnetic materials such as iron. If there is a problem, use the underhook on the bottom of the balance to suspend the material away from the influence of the magnet.

• Eliminate the temperature difference between a sample and the environment. When a sample is warmer (cooler) than the ambient temperature, the sample will be lighter (heavier) than the true weight. This error is due to a rising (falling) draft around the sample.

• Make each weighing gently and quickly to avoid errors caused by the evaporation of moisture from the sample or the absorption of moisture by the sample.

• Do not drop things upon the weighing pan, or place a sample on the pan that is beyond the balance weighing capacity. Place a sample in the center of the weighing pan.

• Do not use a sharp instrument such as a pencil to press the keys. Use your finger only.

• Press the RE-ZERO key before each weighing to eliminate possible errors.

• Calibrate the balance periodically so as to eliminate possible errors.

• Take into consideration the affect of air buoyancy on a sample when more accuracy is required.

• Keep the balance interior free of dust and foreign materials.

• The breeze break (The FZ-i series (all) and FX-120i /200i /300i /500i (only)) is provided as a standard accessory. An anti-static treatment has been applied to the breeze break components, but they may be charged with static electricity when they are unpacked or when the humidity is low. If the weight value is unstable even when there are no drafts or the balance has a problem with repeatability, remove the breeze break. Or wipe the clear plates with a moistened cloth, use the optional AD-1683 DC static eliminator or apply an anti-static spray.

3-3 After Use

• Avoid mechanical shock to the balance.

• Do not disassemble the balance. Contact the local A&D dealer if the balance needs service or repair.

• Do not use organic solvents to clean the balance. Clean the balance with a lint free cloth that is moistened with warm water and a mild detergent.

• The edge of the weighing pan is sharp. Use much care when cleaning the pan.

• Avoid dust and water so that the balance weighs correctly. Protect the internal parts from liquid spills and excessive dust.

3-4 Power Supply

• When the AC adapter is connected, the balance is in the standby mode if the standby indicator is on (refer to “4. DISPLAY SYMBOLS AND KEY OPERATION”). This is a normal state and does not harm the balance. For accurate weighing, warm up the balance for at least 30 minutes before use.
### 4. DISPLAY SYMBOLS AND KEY OPERATION

**Key operation**

Key operation affects how the balance functions. The basic key operations are:

- "Press and release the key immediately" or "Press the key" = normal key operation during measurement
- "Press and hold the key" = key operation

**Display symbols**

- Number of statistical data (Statistical calculation mode)
- Displays the weight data relative to the weighing capacity, in percentage, in the weighing mode (Capacity indicator)

5. WEIGHING UNITS

5-1 Units

With the FZ-i / FX-i series balance, the following weighing units and weighing modes are available:

A unit or mode can be selected and stored in the function table as described on page 14. If a weighing mode (or unit of weight) has been turned off, that mode or unit will be missing in the sequence. Tael has four varieties, one of which can be selected and installed at the factory.

To select a unit or mode for weighing, press the **MODE** key.

For details about the units and modes, see the table below:

| Name (unit, mode)       | Abbrev. | Display | Function table (Storing mode) | Conversion factor | Counting mode
|-------------------------|--------|---------|-------------------------------|------------------|----------------
| Gram                    | g      | g       | g                             | 1 g = 1 g         |                |
| Counting mode           | Pcs    | pcs     | pcs                           |                   |                |
| Percent mode            | %      | %       | %                             |                   |                |
| Ounce (Avoir)           | Oz     | oz      | oz                            | 28.349523125 g    |                |
| Pound                   | Lb     | lb      | lb                            | 453.59237 g       |                |
| Pound/Ounce             | L OZ   | L OZ    | L OZ                          | 1Lb=16 oz, 1 oz=28.349523125 g | 1 oz=28.349523125 g |
| Troy Ounce              | Ozt    | ozt     | ozt                           | 31.1034768 g      |                |
| Metric Carat            | Ct     | ct      | ct                            | 0.2 g             |                |
| Momme                   | Mom    | mom     | mom                           | 3.75 g            |                |
| Pennyweight             | Dwt    | dwt     | dwt                           | 1.55517384 g      |                |

5-2 Storing Units

The units or modes can be selected and stored in the function table. The sequence of displaying the units or modes can be arranged in the function table so as to fit the frequency of use.

Select a unit or mode and arrange the sequence of display as follows:

1. Press and hold the SAMPLE key until \( bA5FnoC \) of the function table is displayed.
2. Press the SAMPLE key several times to display \( \text{Unit} \).
3. Press the PRINT key to enter the unit selection mode.
4. Specify a unit or mode in the order to be displayed using the following keys.
   - **SAMPLE** key: To sequentially display the units.
   - **RE-ZERO** key: To specify a unit or mode. The stabilization indicator appears when the displayed unit or mode is specified.
5. Press the PRINT key to store the units or modes. The balance displays \( \text{End} \) and then displays the next menu item of the function table.
6. Press the CAL key to exit the function table. Then the balance returns to the weighing mode with the unit specified first in step 4.

**Notes**

When the power is turned on, the scale displays the unit specified first in step 4.

In the weighing mode, to select a unit or mode for weighing, press the **MODE** key.
6. WEIGHING

6-1 Basic Operation (Gram Mode)

1. Place a container on the weighing pan, if necessary. Press the **RE-ZERO** key to cancel the weight (tare). The balance displays \(0.00\) g. (The decimal point position depends on the balance model.)

2. Place a sample on the pan or in the container.

3. Wait for the stabilization indicator to turn on. Read the value. While the stabilization indicator is on, pressing the **PRINT** key will output the weight value, using the RS-232C serial interface.

**Note**
Peripheral equipment, that is sold separately, such as a printer or a personal computer is required.

4. Remove the sample and container from the pan.

**Notes**
To use other units, press the **MODE** key and select an appropriate unit.
Press the **SAMPLE** key to turn on or off the minimum weighing value.

When the **ON:OFF** key is pressed with a container placed on the weighing pan, the balance displays \(0.00\) g and weighing is started,
6-2 Counting Mode (PCS)

This is the mode to determine the number of objects in a sample based on the standard sample unit mass. The unit mass means the mass of one piece of the sample. The smaller the variables in each sample unit mass are, the more accurate the counting will be. The balance is equipped with the Automatic Counting Accuracy Improvement (ACAI) function to improve the counting accuracy.

Notes
For counting, use samples with a unit mass of at least ten or more times the minimum weighing value of the balance.
If the sample unit mass variable is too large, it may cause a counting error.
To improve the counting performance, use the ACAI function frequently or divide the samples into several groups and count each group.

Selecting the counting mode
1 Press the [MODE] key to select [PCS] (counting mode).

Storing a sample unit mass
2 Press the [SAMPLE] key to enter the sample unit mass storing mode.
   Even in the storing mode, pressing the [MODE] key will switch to the next mode.
3 To select the number of samples, press the [SAMPLE] key several times. It may be set to 5, 10, 25, 50 or 100.
   Note
   A greater number of samples will yield more accurate counting result.
4 Place a container on the weighing pan, if necessary.
   Press the [RE-ZERO] key to cancel the weight (tare). The number specified in step 3 appears.
   e.g.: [25 0] is displayed if 25 is selected in step 3.
5 Place the number of samples specified on the pan. In this example, 25 pieces.
6 Wait for the stabilization indicator to turn on. Press the [PRINT] key to calculate and store the unit mass. The balance displays [25 PCS] (counting mode) and is set to count samples with this unit mass.
   To improve the accuracy of the unit mass, go to step 8.
Notes
If the balance judges that the mass of the samples is too light and is not adequate to be used as the unit mass, it displays \[ L_0 \]. In that case, store the mass by some quantity. For example, when the model with the minimum weighing value of 0.01 g is used and 10 pieces of samples weigh 0.05 g. Store 100 pieces of samples as 10 and multiply the weighing result by 10.

If the balance judges that the mass of the samples is too light to acquire accurate weighing, it displays an error requiring the addition of more samples to the specified number. For example, \[ 50 - \text{PCS} \] appears to require 25 more samples. Add 25 samples and press the \( \text{PRINT} \) key. When the unit mass is stored correctly, the balance proceeds to the counting mode.

For a more accurate counting operation, use samples with a unit mass of at least ten or more times the minimum weighing value of the balance. For example, when a balance with a minimum weighing value of 0.01 g is used, the recommended sample unit mass is 0.1 g or more.

The sample unit mass stored, even if the AC adapter is removed, is maintained in non-volatile memory.

Counting operation
7 Place the samples to be counted on the pan.
   While the stabilization indicator is on, pressing the \( \text{PRINT} \) key will output the weight value (number of objects), using the RS-232C serial interface.

Note
Peripheral equipment, that is sold separately, such as a printer or a personal computer is required.

Counting mode using the ACAI function
The ACAI is a function that improves the accuracy of the unit mass automatically by increasing the number of samples and averaging the unit mass variable to minimize the weighing error, as the counting process proceeds.

8 If a few more samples are added, the processing indicator turns on. To prevent an error, add three or more. The processing indicator does not turn on if overloaded. Try to add the same number of samples as displayed.

9 The balance re-calculates the unit mass while the processing indicator is blinking. Do not touch the balance or samples on the pan until the processing indicator turns off.

10 Counting accuracy is improved when the processing indicator turns off.
   Each time the above operation is performed, a more accurate unit mass will be obtained. There is no definite upper limit of ACAI range for the number of samples exceeding 100. Try to add the same number of samples as displayed.

11 Remove all the samples used in ACAI and proceed with the counting operation using the improved unit mass.
6-3 Percent Mode (%)

This is the mode to display the weight value in percentage compared to a 100% reference mass and is used for target weighing or checking the sample variable.

Selecting the percent mode
1. Press the [MODE] key to select % (percent mode).

Storing the 100% reference mass
2. Press the [SAMPLE] key to enter the 100% reference mass storing mode.
   - Even in the storing mode, pressing the [MODE] key will switch to the next mode.
3. Place a container on the weighing pan, if necessary. Press the [RE-ZERO] key to cancel the weight (tare). The balance displays 100.0 %.
4. Place the sample to be set as the 100% reference mass on the pan or in the container.
5. Press the [PRINT] key to store the reference mass. The balance displays 100.00 %. (The decimal point position depends on the reference value.)

Notes
If the balance judges that the mass of the sample is too light to be used as a reference, it displays Lo. Do not use the sample.
The reference mass stored, even if the AC adapter is removed, is maintained in non-volatile memory
6. Remove the sample.

Reading the percentage
7. Place a sample to be compared to the reference mass on the pan. The displayed percentage is based on the 100% reference mass.
   - While the stabilization indicator is on, pressing the [PRINT] key will output the weight value, using the RS-232C serial interface.

Note
Peripheral equipment, that is sold separately, such as a printer or a personal computer is required.
6-4 Statistical Calculation Mode

The statistical calculation mode statistically calculates the weight data, and displays or outputs the results. To use the statistical calculation mode, set the "Application function (APF)" parameter of "Application (APFNC)" in the function table to "2", as described below.

Statistical items available are number of data, sum, maximum, minimum, range (maximum-minimum), average, standard deviation and coefficient of variation. What statistical items to output can be selected from the three modes in the function table.

- The wrong data input can be canceled by the key operation, if immediately after the input.
- Turning the balance off will delete the statistical data.
- The standard deviation and coefficient of variation are obtained by the equation below:

  \[
  \text{Standard deviation} = \sqrt{\frac{\sum (X_i - \bar{X})^2}{N(N-1)}} \quad \text{where } X_i \text{ is the i-th weight data,}
  \]
  \[
  \text{N is number of data.}
  \]

  \[
  \text{Coefficient of variation (CV)} = \frac{\text{Standard deviation}}{\text{Average}} \times 100 \%
  \]

5-4-1 Getting Started

Switching to the Statistical Function Mode (Changing The Function Table)

1. Press and hold the SAMPLE key until \( \text{APFNC} \) of the function table is displayed, then release the key.

2. Press the SAMPLE key several times to display \( \text{APFNC} \).

3. Press the PRINT key to display \( \text{APF 0} \).

4. Press the RE-ZERO key several times to display \( \text{APF 2} \).

   To select statistical items to output, go to step 5.
   To store the statistical function mode setting, go to step 7.
   To disable the statistical calculation mode, press the RE-ZERO key to select \( \text{APF 0} \).
Selecting the statistical items to output

5 Press the **SAMPLE** key to display **STAF 0**.

6 Press the **RE-ZERO** key to select the output items.
In the example, **STAF 1** is selected to output the number of data, sum, maximum, minimum, range (maximum-minimum) and average.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Number of data, sum</td>
</tr>
<tr>
<td>1</td>
<td>Maximum, minimum, range (maximum – minimum), average</td>
</tr>
<tr>
<td>2</td>
<td>Number of data, sum, Maximum, minimum, range (maximum – minimum), average, Standard deviation, coefficient of variation</td>
</tr>
</tbody>
</table>

7 Press the **PRINT** key to store the setting.

**Note**
The statistical calculation mode will be enabled using the **ON:OFF** key or when the power is turned on.

8 Press the **CAL** key to return to the weighing mode.

Selecting the unit

9 Press the **MODE** key to select the unit to be used for the statistical calculation mode.

**Notes**
Selecting the unit using the **MODE** key is not available after the data is entered. In this case, clear the data as described on page 22 and select the unit using the **MODE** key.

When the unit used for the statistical calculation mode is to be enabled upon power-on, select the unit in “Unit (Un t)” of the function table beforehand.

5-4-2 Using The Statistical Calculation Mode

Entering data for statistical calculation

Use the following keys to operate the statistical calculation mode.

**MODE** key ............. When the data is entered, moves between the displaying items (weighing mode, statistical results and data operation) each time the key is pressed.
- When no data has been entered, selects the unit.

**SAMPLE** key ............ Turns the minimum weighing value on or off, in the weighing mode.

**RE-ZERO** key ........... Sets the display to zero in the weighing mode.

**PRINT** key .............. Outputs the data number and the weight data and includes the weight data to statistical calculation in the weighing mode. (Output is not in the data format specified in the function table because of the data number added.)
- Outputs the statistical results while the statistical results are displayed. (Output is not in the data format specified in the function table.)

**CAL** key ................. Returns to the weighing mode.
1. Press the [RE-ZERO] key to set the display to zero.
2. Place the sample on the weighing pan and wait for the stabilization indicator to turn on.
3. Press the [PRINT] key to add the data displayed to statistical calculation. The number of data on the upper left of the display increases by 1.
4. Repeat steps 1 to 3 for each weighing.

**Outputting the statistical results**

5. Each time the [MODE] key is pressed, the display changes: the results as selected in “Statistical function mode output items (Stat calculation), [CLEAR] and [CANCEL].

**Notes**

When the number of data is 1, the coefficient of variation is displayed as - - - - - - -.

When the average is 0, the coefficient of variation is displayed as - - - - - - -.

Statistical items are indicated on the upper left of the display using the following symbols.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Statistical item</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUM</td>
<td>Sum</td>
</tr>
<tr>
<td>MAX</td>
<td>Maximum</td>
</tr>
<tr>
<td>MIN</td>
<td>Minimum</td>
</tr>
<tr>
<td>R</td>
<td>Range (Maximum – minimum)</td>
</tr>
<tr>
<td>AVE</td>
<td>Average</td>
</tr>
<tr>
<td>SD</td>
<td>Standard deviation</td>
</tr>
<tr>
<td>CV</td>
<td>Coefficient of variation</td>
</tr>
</tbody>
</table>

6. While the results are displayed, press the [PRINT] key to output the results.
Deleting the latest data
When the wrong data is entered, it can be deleted and excluded from statistical calculation. Only the latest data can be deleted.

1 In the weighing mode, press the **MODE** key, and then press the **SAMPLE** key to display **CANCEL**.

2 Press the **PRINT** key to display **Cn no**.

3 Press the **RE-ZERO** key to display **Cn Go**.

4 Press the **PRINT** key to delete the latest data and exclude it from statistical calculation. The number of data decreases by 1 when the balance returns to the weighing mode.

Clearing the statistical data
All the statistical data will be deleted and the number of data will be 0 (zero).

1 In the weighing mode, press the **MODE** key, and then press the **SAMPLE** key two times to display **CLRr**.

2 Press the **PRINT** key to display **Clr no**.

3 Press the **RE-ZERO** key to display **Clr Go**.

4 Press the **PRINT** key to delete the statistical data. The number of data becomes 0 (zero) when the balance returns to the weighing mode.
6-5 Statistical Calculation Mode (Example of Use)

Here, as an example of use of the statistical calculation mode, mixing of the multiple formulae such as medicine is described. The mixing process is recorded using the balance and the printer.

In the example, the FX-3000i and the AD-8121B (dump print mode) are connected using the RS-232C serial interface.

5-5-1 Getting Started

Changing the function table

Changes:  
- To enable the statistical calculation mode
- To enable “Zero after output”

Enabling the statistical calculation mode

1. Enter the function table menu.
   Press and hold the SAMPLE key until ba5fnc of the function table is displayed, then release the key.

2. Select the application function.
   Press the SAMPLE key several times to display 1apf 0. Then, press the PRINT key to display 1apf 0.

3. Change the application function parameter to “2”.
   Press the RE-ZERO key to display 1apf 2. Press the PRINT key to confirm the change. After 1apf 2 is displayed.

Enabling “Zero after output”

4. Select “Zero after output”.
   Press the SAMPLE key several times to display dout. Then, press the PRINT key to display 1prt 0 and press the SAMPLE key several times to display 1ar-d 0.

5. Enable “Zero after output”.
   Press the RE-ZERO key to display 1ar-d 1. Then, press the PRINT key to confirm the change. After 1ar-d 1 is displayed.

Returning to the weighing mode

6. Press the CAL key to return to the weighing mode.
5-5-2 Using The Statistical Calculation Mode

1. Press the **RE-ZERO** key to set the display to zero.

2. Place a container on the weighing pan. Press the **PRINT** key to cancel the weight (tare). The balance displays **0.00 g** (Storing the tare value). The tare value data is output when the peripheral output equipment is connected.

3. Weigh formula 1 and press the **PRINT** key. The balance displays **0.00 g** (Storing the weight value of formula 1). The weight value data is output when the peripheral output equipment is connected.

4. Weigh formula 2 and press the **PRINT** key. The balance displays **0.00 g** (Storing the weight value of formula 2). The weight value data is output when the peripheral output equipment is connected.

5. When there are some more formulae to be added, repeat step 4.

6. After mixing is complete, press the **MODE** key to display the statistical results.

7. Press the **PRINT** key to output the number of data saved including the tare value and the total weight.

**Output example**

<table>
<thead>
<tr>
<th>No.</th>
<th>St.</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td></td>
<td><strong>+0.0075.63 g</strong></td>
</tr>
<tr>
<td>2</td>
<td></td>
<td><strong>+0.0031.99 g</strong></td>
</tr>
<tr>
<td>3</td>
<td></td>
<td><strong>+0.0077.78 g</strong></td>
</tr>
</tbody>
</table>

N = 3
SUM = **+15.40 g** | Total weight
7. RESPONSE ADJUSTMENT

This function stabilizes the weight value, reducing the influence on weighing that is caused by drafts and vibration at the place where the balance is installed.

The function has three stages as follows and can be changed by simple key operation.

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>FAST</td>
<td>Fast response, but prone to drafts and vibration. Good for target weighing.</td>
</tr>
<tr>
<td>MID</td>
<td>Slow response, but strong against drafts and vibration. Good for weighing which requires a stable display.</td>
</tr>
</tbody>
</table>

**Operation**

1. Press and hold the MODE key until RESPONSE is displayed. And then, release the key.
2. Press the MODE key to select a rate of the response adjustment. Either FAST, MID or SLOW can be selected.
3. After a few seconds of inactivity, or when the PRINT key is pressed, the balance displays End. Then, it returns to the weighing mode and displays the updated response indicator. The response indicator remains displayed for a while.

**Note**

Setting the response rate automatically changes the “Condition (Cond)” and “Display refresh rate (SPd)” parameters of “Environment, Display (ba5F nc)” in the function table, as shown below:

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Cond (Condition)</th>
<th>SPd (Display refresh rate)</th>
</tr>
</thead>
<tbody>
<tr>
<td>FAST</td>
<td>0</td>
<td>2</td>
</tr>
<tr>
<td>MID</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>SLOW</td>
<td>2</td>
<td>0</td>
</tr>
</tbody>
</table>

When the balance is to be used with other setting combinations, set each parameter in the function table.
8. CALIBRATION

8-1 Calibration Mode

The balance has the following modes.

- Calibration using the internal mass (One-touch calibration, only for the FZ-ı series)
- Calibration using an external weight
- Calibration test using an external weight (Calibration test does not perform calibration.)

Terms

The following terms are defined as follows:

External weight = A weight that you have. Referred to as a calibration weight when used for calibration.
Calibration weight = A weight used for calibration
Target weight = An external weight used for calibration test

Caution

- Calibration adjusts the balance for accurate weighing.
  Besides periodic calibration and before each use, perform calibration when:
  • The balance is installed for the first time.
  • The balance has been moved.
  • The ambient environment has changed.
- Do not allow vibration or drafts to affect the balance during calibration.
- To output the data for GLP using the RS-232C serial interface, set “GLP output (info)” of “Data output (dout)”.
  For details, refer to “10. FUNCTION TABLE”.
- Calibration test is available only when “GLP output (info)” of “Data output (dout)” is set to “1” or “2”.
- When calibrating, use the accessory breeze break. (Models: FZ-ı series (all) and FX-120ı /200ı /300ı /500ı)

Caution on using an external weight

- The accuracy of an external weight will influence the accuracy of weighing. Select an appropriate weight as listed below:

<table>
<thead>
<tr>
<th>Model</th>
<th>Usable calibration weight</th>
<th>Adjustable range</th>
</tr>
</thead>
<tbody>
<tr>
<td>FX-120ı</td>
<td>100 g, 50 g</td>
<td>-0.050 g to +0.050 g</td>
</tr>
<tr>
<td>FX-200ı</td>
<td>200 g, 100 g, 50 g</td>
<td>-0.050 g to +0.050 g</td>
</tr>
<tr>
<td>FX-300ı</td>
<td>300 g, 200 g, 100 g, 50 g</td>
<td>-0.50 g to +0.50 g</td>
</tr>
<tr>
<td>FX-500ı</td>
<td>500 g, 400 g, 300 g, 200 g, 100 g, 50 g</td>
<td></td>
</tr>
<tr>
<td>FX-1200ı</td>
<td>1000 g, 500 g</td>
<td>-0.50 g to +0.50 g</td>
</tr>
<tr>
<td>FX-2000ı</td>
<td>2000 g, 1000 g, 500 g</td>
<td>-0.50 g to +0.50 g</td>
</tr>
<tr>
<td>FX-3000ı</td>
<td>3000 g, 2000 g, 1000 g, 500 g</td>
<td></td>
</tr>
<tr>
<td>FX-5000ı</td>
<td>5000 g, 4000 g, 3000 g, 2000 g, 1000 g, 500 g</td>
<td></td>
</tr>
</tbody>
</table>

The calibration weight in bold type: factory setting

The calibration weight value can be adjusted within the range above.

Display

- This indicator means “the balance is measuring calibration data”.
  Do not allow vibration or drafts to affect the balance while this indicator is displayed.
8-2 Calibration Using the Internal mass (One-Touch Calibration, only for FZ-i series)

This function calibrates the balance using the internal mass. The only operation required is to press the **CAL** key.

**Note**

Level the balance by adjusting the leveling feet and confirm that the bubble is in the center of the spirit level. Poor level adjustment may cause a calibration error while using the internal mass.

**Operation**

1. Connect the AC adapter and warm up the balance for at least 30 minutes with nothing on the weighing pan.
2. Place the accessory breeze break on the balance and press the **CAL** key.
3. The balance displays **CAL in** and performs calibration using the internal mass. Do not allow vibration or drafts to affect the balance.
4. The balance displays **End** after calibration. If the “GLP output (in Fo)” parameter of the function table is set to “1” or “2”, the balance displays **GLP** and outputs “Calibration Report” using the RS-232C interface or stores the data in memory. For details on the calibration report format, refer to “11-2 GLP Report”.
5. The balance will automatically return to the weighing mode after calibration.

**About the internal mass**

The mass of the internal mass may change due to corrosion or other damage caused by the operating environment, or due to aging. Check the internal mass periodically. Correct the internal mass value as necessary. For details, refer to “8-3 Correcting the internal mass value: 1” and “8-4 Correcting the internal mass value: 2”.

To maintain the weighing accuracy, perform the internal mass value correction periodically.
8-3 Correcting the Internal Mass Value: 1 (Only for FZ-i series)

- The FZ-i series balance can correct the internal mass value using an external weight.
  Method 1: Calibrate the balance using the internal mass. Measure the external weight. Calculate the correction value. And store it in the balance.
- The adjustable range of the internal mass value is as follows:

<table>
<thead>
<tr>
<th>Model</th>
<th>Correction reference value</th>
<th>Adjustable range</th>
</tr>
</thead>
<tbody>
<tr>
<td>FZ-120i</td>
<td>100 g</td>
<td>-0.050 g to +0.050 g</td>
</tr>
<tr>
<td>FZ-200i /300i /500i</td>
<td>200 g</td>
<td>-0.50 g to +0.50 g</td>
</tr>
<tr>
<td>FZ-1200i</td>
<td>1000 g</td>
<td></td>
</tr>
<tr>
<td>FZ-2000i /3000i /5000i</td>
<td>2000 g</td>
<td></td>
</tr>
</tbody>
</table>

**Operation**

Example: Correcting the weight value by +0.003 g in 100 g using the FZ-120i
If correcting the weight value by +0.003 g in 50 g, use the correction value of +0.006 g as the correction reference value is 100 g.

1. Perform calibration using the internal mass (one-touch calibration). Place the external weight on the FZ-120i weighing pan to obtain the correction value.
2. With the factory setting, the balance cannot correct the internal mass value. Refer to "9. FUNCTION SWITCH AND INITIALIZATION" and set the internal mass value correction switch to "1".
3. In the weighing mode, press and hold the SAMPLE key to display "ba5Fnc".
4. Press the SAMPLE key several times until "C5 in 1" is displayed.
5. Press the PRINT key. Correct the internal mass value using the following keys:
   - RE-ZERO key: To increase the value by one. The balance displays 50 digits after +50 digits.
   - MODE key: To decrease the value by one.
   - PRINT key: To store the correction value and display the next menu item of the function table.
   - CAL key: To cancel the operation and return to the weighing mode.
6. Press the CAL key to return to the weighing mode.
7. Press the CAL key to perform calibration using the internal mass.
8. Confirm that the internal mass value has been corrected properly by placing the external weight on the weighing pan.
   If the internal mass value has not been corrected properly, repeat the procedure to adjust the correction value.
8-4 Correcting the Internal Mass Value: 2 (Only for FZ-i series)

- The FZ-i series balance can correct the internal mass value using an external weight.
  - Method 2: Calibrate the balance using the external weight. The balance performs automatic calibration using the internal mass, corrects the internal mass value and stores it in the balance. The corrected mass value is maintained in non-volatile memory even if the AC adapter is removed.

- The usable calibration weights and the adjustable range are as follows:

<table>
<thead>
<tr>
<th>Model</th>
<th>Usable calibration weight</th>
<th>Adjustable range</th>
</tr>
</thead>
<tbody>
<tr>
<td>FZ-120i</td>
<td>100 g, 50 g</td>
<td>-0.050 g to +0.050 g</td>
</tr>
<tr>
<td>FZ-200i</td>
<td>200 g, 100 g, 50 g</td>
<td>-0.50 g to +0.50 g</td>
</tr>
<tr>
<td>FZ-300i</td>
<td>300 g, 200 g, 100 g, 50 g</td>
<td></td>
</tr>
<tr>
<td>FZ-500i</td>
<td>500 g, 400 g, 300 g, 200 g, 100 g, 50 g</td>
<td></td>
</tr>
<tr>
<td>FZ-1200i</td>
<td>1000 g, 500 g</td>
<td></td>
</tr>
<tr>
<td>FZ-2000i</td>
<td>2000 g, 1000 g, 500 g</td>
<td></td>
</tr>
<tr>
<td>FZ-3000i</td>
<td>3000 g, 2000 g, 1000 g, 500 g</td>
<td></td>
</tr>
<tr>
<td>FZ-5000i</td>
<td>5000 g, 4000 g, 3000 g, 2000 g, 1000 g, 500 g</td>
<td></td>
</tr>
</tbody>
</table>

The calibration weight in bold type: factory setting
The calibration weight value can be adjusted within the range above.

**Operation**

1. With the factory setting, the balance can not correct the internal mass value. Refer to "9. FUNCTION SWITCH AND INITIALIZATION" and set the internal mass value correction switch to 1.

2. In the weighing mode, press and hold the SAMPLE key to display 『bASFnc』.

3. Press the SAMPLE key several times until 『CS in 2』 is displayed.
   - If 『CS in 2』 is not displayed, perform step 1.

4. Press the PRINT key to display 『CAL 0』.
   - Refer to "8-5 Calibration Using an External Weight", to perform the calibration.

5. After calibration, the balance displays 『rEAdy』.
   - Remove the external weight, place the accessory breeze break on the balance and press the PRINT key.

6. 『CS in 2』 is displayed and the balance corrects the internal mass value automatically

7. After correcting the internal mass value, the balance displays 『CAL 1n』 and performs the calibration automatically using the corrected internal mass value.

8. The balance displays 『End』 and returns to the weighing mode.

9. Confirm that the internal mass value has been corrected properly by placing the external weight used for the correction procedure on the weighing pan.
   - If the internal mass value has not been corrected properly, repeat the procedure to adjust the correction value.
8-5 Calibration Using an External Weight

This function calibrates the balance using an external weight.

Operation

1. Connect the AC adapter and warm up the balance for at least 30 minutes with nothing on the pan.

2. Press and hold the CAL key until CAL out is displayed, and then release the key.

3. The balance displays CAL 0.
   - If you want to change the calibration weight (a list of usable weights is shown on page 26), press the SAMPLE key and go to step 4.
   - If you use the calibration weight value stored in the balance, go to step 5.

4. Specify the calibration weight value as follows:
   - SAMPLE key: To switch the display condition to: “All of weight selection mode) or “The last two digits blinking” (value adjustment mode).
   - RE-ZERO key (To increase the value)
   - MODE key (To decrease the value)
   - To select the calibration weight or adjust the value.
   - PRINT key: To store the new weight value. Even if the AC adapter is removed, the data is maintained in non-volatile memory.
   - CAL key: To cancel the operation and return to CAL 0.

   e.g. Calibration weight value 1000.12 g
5 Confirm that there is nothing on the pan and press the **PRINT** key. The balance measures the zero point. Do not allow vibration or drafts to affect the balance. The balance displays the calibration weight value.

6 Place the displayed calibration weight on the pan and press the **PRINT** key. The balance measures the calibration weight. Do not allow vibration or drafts to affect the balance.

7 The balance displays **End**. Remove the weight from the pan.

8 When the GLP output is set, the balance displays **GLP** and outputs “Calibration Report”.

9 The balance will automatically return to the weighing mode.

10 Place the calibration weight on the pan and confirm that the value displayed is within ±2 digits of the specified value. If it is not within the range, check the ambient conditions such as drafts and vibration, also check the weighing pan. Then, repeat steps 1 to 9.
8-6 Calibration Test Using an External Weight

This function tests the balance weighing accuracy using an external weight and outputs the result. This is available only when the “GLP output (mF0)” parameter is set to “1” or “2”. (Calibration test does not perform calibration.)

**Operation**

1. Connect the AC adapter and warm up the balance for at least 30 minutes with nothing on the pan.

2. Press and hold the CAL key until CALout is displayed, and then release the key.

3. The balance displays CC 0.
   - If you want to change the target weight (a list of usable weights is shown on page 26), press the SAMPLE key and go to step 4.
   - If you use the target weight value stored in the balance, go to step 5.

4. Specify the target weight value as follows:
   - SAMPLE key To switch the display condition to: “All of the segments blinking” (target weight selection mode) or “The last two digits blinking” (value adjustment mode).
   - RE-ZERO key (To increase the value)
   - MODE key (To decrease the value)
     To select the target weight or adjust the value.
   - PRINT key To store the new weight value. Even if the AC adapter is removed, the data is maintained in non-volatile memory.
   - CAL key To cancel the operation and return to CC 0.
5 Confirm that there is nothing on the pan and press the PRINT key. The balance measures the zero point and displays the measured value. Do not allow vibration or drafts to affect the balance. The balance displays the target weight value.

6 Place the displayed target weight on the pan and press the PRINT key. The balance measures the target weight and displays the measured value. Do not allow vibration or drafts to affect the balance.

7 The balance displays [End]. Remove the weight from the pan.

8 When the GLP output is set, the balance displays GLP and outputs "Calibration Test Report".

9 The balance will automatically return to the weighing mode.
9. FUNCTION SWITCH AND INITIALIZATION

9-1 Permit or Inhibit

The balance stores parameters that must not be changed unintentionally. There are two switches for the purpose of protecting these parameters. Each switch can select either “permit” or “inhibit”. The “inhibit” protects parameters against unintentional operations.

Switches (FZ-i series)

(The display shown left indicates the factory settings.)

Function table
- To inhibit changes to the function table
- To permit changes to the function table

Calibration using the internal mass (One-touch calibration)
- To inhibit calibration using the internal mass
- To permit calibration using the internal mass

Calibration using an external weight
- To inhibit calibration using an external weight
- To permit calibration using an external weight

Not used

Internal mass value correction
- To inhibit correction
- To permit correction

Switches (FX-i series)

(The display shown left indicates the factory settings.)

Function table
- To inhibit changes to the function table
- To permit changes to the function table

Not used

Calibration using an external weight
- To inhibit calibration using an external weight
- To permit calibration using an external weight

Not used

Not used
Operation
1 Press the ON:OFF key to turn off the display.
2 While pressing and holding the PRINT key and the SAMPLE key, press the ON:OFF key. The balance displays P5.
3 Press the PRINT key. Then the balance displays the function switches.
4 Set the switches using the following keys.
   - **SAMPLE** key: To select the switch to change the parameter. The selected switch blinks.
   - **RE-ZERO** key: To change the parameter of the switch selected.
     - 0: To inhibit changes.
     - 1: To permit changes.
   - **PRINT** key: To store the new parameter and return to the weighing mode.
   - **CAL** key: To cancel the operation (CLR is displayed.) To return to the weighing mode, press the CAL key once again.

9-2 Initializing the Balance
This function returns the following parameters to factory settings.
- Calibration data
- Function table
- The sample unit mass value (counting mode), 100% reference mass value (percent mode)
- External calibration weight
- Function switch settings
- Statistical data
- Internal mass value (Only for the FZ-i series)

Note
Be sure to calibrate the balance after initialization.

Operation
1 Press the ON:OFF key to turn off the display.
2 While pressing and holding the PRINT key and the SAMPLE key, press the ON:OFF key. The balance displays P5.
3 Press the SAMPLE key to display CLR.
4 Press the PRINT key. To cancel this operation, press the CAL key.
5 Press the RE-ZERO key.
6 Press the PRINT key to initialize the balance.
   The balance will automatically return to the weighing mode.
10. FUNCTION TABLE

The function table reads or rewrites the parameters that are stored in the balance. These parameters stored, even if the AC adapter is removed, are maintained in non-volatile memory.

10-1 Structure and Sequence of the Function Table

The function table menu consists of two layers. The first layer is the “Class” and the second layer is the “Item”. Each item stores a parameter.

Example
This example sets “Auto print mode A” for “Data output mode” and “100 digits” for “Auto print difference”.

10-2 Display and Keys

<table>
<thead>
<tr>
<th>Display/Key</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The symbol “○” indicates that the parameter displayed is in effect.</td>
</tr>
<tr>
<td></td>
<td>When pressed and held in the weighing mode, enters the function table mode. Selects the class or item in the function table mode.</td>

| $C_{5} \text{ in } 1^*$ Internal mass value correction: Method 1 | | Refer to "8. CALIBRATION". |
| $C_{5} \text{ in } 2^*$ Internal mass value correction: Method 2 | | Displayed only when the function switch (internal mass value correction switch) is set to 1 |

* : Only for the FZ- series

**Caution**
The balance may not transmit the data completely at the specified refresh rate, depending on the baud rate.

When a refresh rate of 20 times/second is used, set the baud rate to 4800 bps or higher.
10-4 Description of the Class “Environment, Display”

**Condition (Cond)**

- **Cond 0**
  This parameter is for sensitive response to the fluctuation of a weight value. Used for powder target weighing, weighing a very light sample or when quick response weighing is required.
  After setting, the balance displays [FAST].

- **Cond 2**
  This parameter is for stable weighing with slow response. Used to prevent a weight value from drifting due to vibration or drafts.
  After setting, the balance displays [SLOW].

**Note**
With “Hold function (Hold)” set to “ON (I)”, this item is used to set the averaging time.

**Stability band width (5t-b)**

This item controls the width to regard a weight value as a stable value. When the fluctuation per second is less than the parameter, the balance displays the stabilization indicator and outputs the data. The parameter influences the “Auto print mode”

- **5t-b 0**
  This parameter is for sensitive response of the stabilization indicator. Used for exact weighing.

- **5t-b 2**
  This parameter ignores slight fluctuation of a weight value. Used to prevent a weight value from drifting due to vibration or drafts.

**Note**
With “Hold function (Hold)” set to “ON (I)”, this item is used to set the stabilization range.

**Hold function (Hold) (Animal weighing mode)**

This function is used to weigh a moving object such as an animal. When the weight data is over the weighing range from zero and the display fluctuation is within the stabilization range for a fixed period of averaging time, the processing indicator illuminates and the balance displays the average weight of the animal. When the animal is removed from the weighing pan, the display returns to zero automatically.

This function is available only when the hold function parameter is set to “I” (the animal mode indicator [ANIMAL] illuminates) and any weighing unit other than the counting mode is selected.

The stabilization range and averaging time are set in “Condition (Cond)” and “Stability band width (5t-b)”.

<table>

<td>8 seconds More accurate</td>
</tr>
</tbody>
</table>
Zero tracking ($trc$)
This function tracks zero point drift caused by changes in the environment and stabilizes the zero point. When the weight data is only a few digits, turn the function off for accurate weighing.

**Note**
Digit indicates a unit of minimum weighing value.

- $trc \ 0$: The tracking function is not used. Used for weighing a very light sample.
- $trc \ 1$: The tracking function is used. Normal zero tracking.
- $trc \ 2$: The tracking function is used. Strong zero tracking.
- $trc \ 3$: The tracking function is used. Very strong zero tracking.

Display refresh rate ($5pd$)
Period to refresh the display. This parameter influences “Stream mode” along with “Baud rate” and “Data output pause”

**Note**
This item is selected automatically when the response rate is changed.

Decimal point ($pnt$)
The decimal point format can be selected.

Auto display-ON ($p\ -\ on$)
When the AC adapter is connected, the display is automatically turned on in the weighing mode, without the $ON:OFF$ key operation. Used when the balance is built into an automated system. 30-minute warm up is necessary for accurate weighing.

Auto display-OFF ($p\ 0FF$)
When the AC adapter is connected and no operation is performed (inactivity state) for 10 minutes, the display is automatically turned off and the standby indicator is illuminated.
10-5 Description of the Item “Data Output Mode”

The parameter setting of the “Data output mode (Prt)” applies to the performance when the data is transmitted using the RS-232C serial interface.

Key mode

When the PRINT key is pressed with the stabilization indicator turned on, the balance outputs the weight data and the display blinks one time.

Required setting: \textit{dout Prt 0} Key mode

Auto print modes A and B

When the displayed value is stable and the conditions of “Auto print polarity”, “Auto print difference” and reference value are met, the balance outputs the weight data.

When the PRINT key is pressed with the stabilization indicator turned on, the balance outputs the data and the display blinks one time.

Mode A: Required setting
\begin{itemize}
  \item \textit{dout Prt 1} Auto print mode A (reference = zero)
  \item \textit{dout AP-P} Auto print polarity
  \item \textit{dout AP-b} Auto print difference
\end{itemize}

Example: “For outputting the weight value each time a sample is added, with “\textit{Ar-d}” set to “1” (to adjust zero after the data is output).”

Mode B: Required setting
\begin{itemize}
  \item \textit{dout Prt ?} Auto print mode B (reference = last stable value)
  \item \textit{dout AP-P} Auto print polarity
  \item \textit{dout AP-b} Auto print difference
\end{itemize}

Example: “For outputting the weight value while a sample is added.”

Stream mode

The balance outputs the weight data continuously regardless of the display condition. The display does not blink in this mode.

Required setting
\begin{itemize}
  \item \textit{dout Prt 3} Stream mode
  \item \textit{bASFnc SPd} Display refresh rate
  \item \textit{S IF bPS} Baud rate
\end{itemize}

Example: “For monitoring data on a computer”

Caution

The balance may not transmit the data completely at the specified refresh rate and baud rate. Set the baud rate higher.

Key mode B

When the PRINT key is pressed, the balance outputs the weight data, regardless of the display condition. The display does not blink in this mode.

Key mode C

When the PRINT key is pressed with the stabilization indicator turned on, the balance outputs the weight data. When the stabilization indicator is not on, the balance waits for the indicator to turn on and outputs the data. The balance blinks one time in this mode.
Interval output mode
The weight data is periodically output. When the PRINT key is pressed, the balance starts to output the weight data at a preset interval time. When the PRINT key is pressed again, the balance stops outputting the weight data.

Required setting

<table>
<thead>
<tr>
<th>dout</th>
<th>Prt</th>
<th>int</th>
</tr>
</thead>
</table>

Example

“For outputting the weight data periodically.”

Caution
The balance may not transmit the data completely at the specified interval times and baud rate. Set the baud rate higher.

10-6 Description of the Item “Data Format”

A&D standard format

This format is used when the peripheral equipment can receive the A&D format. If an AD-8121B is used, set the printer to MODE 1 or 2.

- This format consists of fifteen characters excluding the terminator.
- A header of two characters indicates the balance condition.
- The polarity sign is placed before the data with the leading zeros. If the data is zero, the plus sign is used.
- The unit, consisting of three characters, follows the data.

```
<table>
<thead>
<tr>
<th>S</th>
<th>T</th>
<th>+</th>
<th>0</th>
<th>0</th>
<th>1</th>
<th>2</th>
</tr>
</thead>
</table>
```

Header Data Unit Terminator

- Stable header
- Unstable header
- Overload header

DP (Dump print) format

This format is used when the peripheral equipment cannot receive the A&D format. If an AD-8121B is used, set the printer to MODE 3.

- This format consists of sixteen characters excluding the terminator.
- A header of two characters indicates the balance condition. No overload header is used.
- The polarity sign is placed before the data, with spaces in place of leading zeros, if the data is not zero or overloaded.
- The unit, consisting of three characters, follows the data.

```
<table>
<thead>
<tr>
<th>W</th>
<th>T</th>
</tr>
</thead>
</table>
```

Header Data Unit Terminator

- Stable header
- Unstable header
KF format  
This is the Karl-Fischer moisture meter format and is used when the peripheral equipment can only communicate using this format.
- This format consists of fourteen characters excluding the terminator.
- This format has no header characters.
- The polarity sign is placed before the data, with spaces in place of leading zeros, if the data is not zero or overloaded.
- This format outputs the unit only for a stable value.

```
+    1 2 . 7 8  g CR LF
```

MT format  
A header of two characters indicates the balance condition.
- This format has no header characters.
- The polarity sign is used only for negative data.
- The weight data uses spaces in place of leading zeros.
- The character length of this format changes dependent upon the unit.

```
S . . 1 2 . 7 8  g CR LF
```

NU (numerical) format  
This format outputs only numerical data.
- This format consists of nine characters excluding the terminator.
- The polarity sign is placed before the data with the leading zeros. If the data is zero, the plus sign is used.

```
+  0 0 1 2 . 7 8 CR LF
```

CSV format  
Separates the data of A&D standard format and the unit by a comma (,).
- Outputs the unit even when the data is overloaded.

```
ST,+00012.78, g<CR><LF>
O L, + 9 9 9 9 9 9 E + 1 9 , g CR LF
```
Date  
- dout 5-td 2 or 3
  - The date output order can be changed in "Clock (C L  RdJ)".
  - The year is output in a four-digit format.

\[12/31/2010\]

Time  
- dout 5-td 1 or 3
  - The time is output in a 24-hour format.

\[12:34:56\]

\[
\text{Space, ASCII 20h} \\
\text{CR Carriage Return, ASCII 0Dh} \\
\text{LF Line Feed, ASCII 0Ah}
\]
Note
When “Pound Ounce” is selected, the data is output with the unit of ounce (oz).

10-8 Description of the Item “Application Function”

Capacity indicator (APF 1)
In the weighing mode, the indicator displays the weight data relative to the weighing capacity in percentage. (Zero = 0%, maximum capacity = 100%)

Statistical calculation mode (APF 2)
The mode statistically calculates the weight data, and displays or outputs the results. For details, refer to “6-4 Statistical Calculation Mode”. 
10-9 Clock and Calendar Function (Only for FZ-i series)

The FZ-i series balance is equipped with a clock and calendar function. When the “GLP output (info)” parameter is set to “1” or “2” and the “Time/Date output (5-td)” parameter is set to “1”, “2” or “3”, the time and date are added to the output data. Set or confirm the time and date as follows:

**Operation**

1. Press and hold the **SAMPLE** key until “Br5Fnc” of the function table is displayed.
2. Press the **SAMPLE** key several times to display “L Rdu”.
3. Press the **PRINT** key. The balance enters the mode to confirm or set the time and date.

**Confirming the date**

4. The current date is displayed with all the digits blinking.
   - When the date is correct and the operation is to be finished, press the **CAL** key and go to step 8.
   - When the date is correct and the time is to be confirmed, press the **SAMPLE** key and go to step 6.
   - When the date is not correct and is to be changed, press the **RE-ZERO** key and go to step 5.

**Note**

The year is expressed using a two-digit format. For example, the year 2010 is expressed as “10”.

**Setting the date (with part of the digits blinking)**

5. Set the date using the following keys.
   - **SAMPLE** key: To select the digits to change the value. The selected digits blink.
   - **RE-ZERO** key: To increase the value by one.
   - **MODE** key: To decrease the value by one.
   - **PRINT** key: To store the new setting, display “End” and go to step 6.
   - **CAL** key: To cancel the new setting and go to step 6.
Confirming the time

6 The current time is displayed with all the digits blinking.
- When the time is correct and the date does not need to be confirmed, press the **CAL** key and go to step 8.
- When the time is correct and the date is to be confirmed, press the **SAMPLE** key and go back to step 4.
- When the time is not correct and is to be changed, press the **RE-ZERO** key and go to step 7.

Setting the time (with part of the digits blinking)

7 Set the time in a 24-hour format using the following keys.

- **SAMPLE** key  To select the digits to change the value. The selected digits blink.
- **RE-ZERO** key  To increase the value by one.
- **MODE** key     To decrease the value by one.
- **PRINT** key    To store the new setting, display **End** and go to step 8.
- **CAL** key      To cancel the new setting and go back to step 4.

Quitting the operation

8 The balance displays the next menu of the function table. Press the **CAL** key to exit the clock and calendar function and return to the weighing mode.

Notes

- Do not enter invalid values such as a non-existing date when setting the time and date.
10-10 Comparator Function

The results of the comparison are indicated by HI OK LO on the display.

Operating conditions:
- No comparison
- Comparison when the weight data is stable or overloaded, excluding “near zero”
- Comparison when the weight data is stable or overloaded, including “near zero”
- Continuous comparison, excluding “near zero”
- Continuous comparison, including “near zero”

To compare, use:
- Upper limit value and lower limit value
- Digital input

Note
"Near zero" means that the weight value is within ±10 digits of the minimum weighing value.
For example, using an FX-3000i in gram mode, the range of ±0.10 g is “near zero”.
For the description of “Comparator (Cp fnc)”, refer to “10-3 Details of the Function Table”.

Setting example
(Continuous comparison, excluding “near zero”, upper limit and lower limit values, digital input)

Selecting a comparator mode
1. Press and hold the SAMPLE key until bァ5Fnc of the function table is displayed.
2. Press the SAMPLE key several times to display Cп Fnc.
3. Press the PRINT key.
4. Press the RE-ZERO key several times to display Cп 3.
5. Press the PRINT key to store the selected mode.

Entering the upper limit value
6. With Cп Hi displayed, press the PRINT key. The current setting of the upper limit value is displayed with all the digits blinking.
   - When the current setting is not to be changed, press the PRINT or CAL key to go to step 7.
   - When the current setting is to be changed, press the RE-ZERO key. Change the setting using the following keys.

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SAMPLE</td>
<td>To select the digit to change the value. The selected digit blinks.</td>
</tr>
<tr>
<td>RE-ZERO</td>
<td>To change the value of the digit selected.</td>
</tr>
<tr>
<td>MODE</td>
<td>To switch the polarity.</td>
</tr>
<tr>
<td>PRINT</td>
<td>To store the new setting and go to step 7.</td>
</tr>
<tr>
<td>CAL</td>
<td>To cancel the new setting and go to step 7.</td>
</tr>
</tbody>
</table>

Entering the lower limit value
7. With Cп Lo displayed, press the PRINT key. The current setting of the lower limit value is displayed with all the digits blinking.
   - When the current setting is not to be changed, press the PRINT or CAL key to go to step 8.
   - When the current setting is to be changed, press the RE-ZERO key. Change the setting using the following keys.

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SAMPLE</td>
<td>To select the digit to change the value. The selected digit blinks.</td>
</tr>
<tr>
<td>RE-ZERO</td>
<td>To change the value of the digit selected.</td>
</tr>
<tr>
<td>MODE</td>
<td>To switch the polarity.</td>
</tr>
<tr>
<td>PRINT</td>
<td>To store the new setting and go to step 8.</td>
</tr>
<tr>
<td>CAL</td>
<td>To cancel the new setting and go to step 8.</td>
</tr>
</tbody>
</table>

8. Press the CAL key to exit the comparator function and return to the weighing mode.
11. ID NUMBER AND GLP REPORT

- The ID number is used to identify the balance when Good Laboratory Practice (GLP) is used.
- The ID number is maintained in non-volatile memory even if the AC adapter is removed.
- The GLP output format is selected at “GLP output \( (nF_0) \)” of the function table and can be output to a personal computer or printer using the RS-232C serial interface.
- The GLP output format includes the balance manufacturer, model, serial number, ID number and space for signature for weight data, and the weight used and results for calibration or calibration test data.

When the AD-8121B is used, the date and time can be printed using the AD-8121B clock and calendar function. In this case, set the “GLP output \( (nF_0) \)” parameter to “1”.

- The balance can output the following reports for GLP.
  - “Calibration report” of the calibration, using the internal mass (Calibration due to changes in temperature and one-touch calibration.)
  - “Calibration report” of the calibration, using an external weight.
  - “Calibration test report” of the calibration test, using an external weight.
  - “Title block” and “End block” for the weight data.

11-1 Setting the ID Number

1. Press and hold the \([\text{SAMPLE}]\) key until \([\text{bASFnC}]\) of the function table is displayed.
2. Press the \([\text{SAMPLE}]\) key several times to display \([id]\).
3. Press the \([\text{PRINT}]\) key. Set the ID number using the following keys.
   - \([\text{SAMPLE}]\) key: To select the digit to change the value. The selected digit blinks.
   - \([\text{RE-ZERO}]\) key: To set the character of the digit selected. Refer to the display character set shown below.
   - \([\text{PRINT}]\) key: To store the new ID number and display \([\text{RPFnc}]\).
   - \([\text{CAL}]\) key: To cancel the new ID number and display \([\text{RPFnc}]\).
4. Press the \([\text{CAL}]\) key to return to the weighing mode.

Display character set

```
0123456789- _ABCDEFGHIJKLMNOPQRSTUVWXYZ
0123456789- _abcdefgijknopqrstuvwxyz
_ _ Space
```
11-2 GLP Report

Set the following parameters to output the report.

- To print the report, set the “GLP output (info)” parameter to “1”, set the “Data output pause (PUSE)” parameter to “1” and use MODE 3 of the AD-8121B. For details on using the printer, refer to “15-1 Connection to the AD-8121B Printer”.
- To output the report to a personal computer using the RS-232C serial interface, set the “GLP output (info)” parameter to “2”.

Note
If the time and date are not correct, adjust the AD-8121B clock and calendar (FX-i series) or use “[L Adj]” of the function table to adjust the time and date (FZ-i series).

```

* With FZ-i series, the time and date are added to output data.
Title block and end block

When a weight value is recorded as the GLP data, “Title block” and “End block” are inserted at the beginning and at the end of a group of weight values, in the GLP report.

Note

To output the report to an AD-8121B, use MODE 3 of the AD-8121B.

Operation

1. With the weight data displayed, press and hold the PRINT key until START is displayed. The “Title block” is output.

2. The weight data is output according to the parameter setting of the data output mode.

3. Press and hold the PRINT key until END is displayed. The “End block” is output.

When the setting is "info 1":

When the setting is "info 2":

* With FZ-i series, the time and date are added to output data.
12. UNDERHOOK

The underhook can be used for magnetic materials or density measurement. The built-in underhook is revealed by removing the plastic cap on the bottom of the balance. Use the underhook as shown below.

Caution
Do not apply excessive force to the underhook.
When not in use, attach the plastic cap to prevent dust from getting into the balance.
Do not push the underhook upward.
13. PROGRAMMABLE-UNIT

This is a programmable unit conversion function. It multiplies the weight data in grams by an arbitrary coefficient set in the function table and displays the result.

The coefficient must be within the range between the minimum and maximum shown below. If the coefficient set is beyond the range, an error is displayed and the balance returns to the coefficient setting mode, prompting to enter an appropriate value. A coefficient of 1 was set at the factory.

<table>
<thead>
<tr>
<th>Model</th>
<th>Minimum coefficient</th>
<th>Maximum coefficient</th>
</tr>
</thead>
<tbody>
<tr>
<td>FX-120i /200i /300i /500i</td>
<td>0.000001</td>
<td>1000</td>
</tr>
<tr>
<td>FZ-120i /200i /300i /500i</td>
<td></td>
<td>100</td>
</tr>
<tr>
<td>FX-1200i /2000i /3000i /5000i</td>
<td></td>
<td>10000</td>
</tr>
<tr>
<td>FZ-1200i /2000i /3000i /5000i</td>
<td></td>
<td>10000</td>
</tr>
</tbody>
</table>

Operation

1. Press and hold the **SAMPLE** key until \( \frac{\text{bf5Fnc}}{\text{bcnc}} \) of the function table is displayed.

2. Press the **SAMPLE** key several times to display \( \text{mlt} \).

3. Press the **PRINT** key. The balance enters the mode to confirm or set the coefficient.

Confirming the coefficient

4. The current coefficient is displayed with the first digit blinking.
   
   - When it is not to be changed, press the **CAL** key and go to step 6.
   - When it is to be changed, press the **RE-ZERO** key and go to step 5.

Setting the coefficient

5. Set the coefficient using the following keys.
   
   - **SAMPLE** key: To select a digit to change the value. The selected digit blinks.
   - **RE-ZERO** key: To change the value.
   - **MODE** key: To change the decimal point position.
   
   Each time the switch is pressed, the decimal point position changes as follows:
   
   \[
   0.0000 \rightarrow 0.0001 \rightarrow \ldots \rightarrow 00001 \rightarrow 000001
   \]

   - **PRINT** key: To store the new setting, display \( \text{End} \) and go to step 6.
   - **CAL** key: To cancel the new setting and go to step 6.

Quitting the operation

6. The balance displays \( \text{Un x} \). Press the **CAL** key to exit the programmable-unit function and return to the weighing mode.

Using the function

Press the **MODE** key to select the programmable-unit (no display on the unit section). Perform weighing as described in "6-1 Basic Operation (Gram Mode)". After weighing, the balance displays the result (weight data in grams x coefficient).
14. RS-232C SERIAL INTERFACE

The balance is a Data Communication Equipment (DCE) device. Connect the balance to a personal computer (DTE) using a straight through cable.

Transmission system: EIA RS-232C (D-Sub 9-pin, female connector)
Transmission form: Asynchronous, bi-directional, half duplex
Transmission rate: 20 times/second, 10 times/second or 5 times/second (same as data refresh rate)
Data format:
- Baud rate: 600, 1200, 2400, 4800, 9600, 19200 bps
- Data bits: 7 or 8 bits
- Parity: Even, Odd (Data bits 7 bits)
- None (Data bits 8 bits)
- Stop bit: 1 bit
- Code: ASCII

</tbody>
</table>

*1 Set appropriate parameters for “AP- P (Auto print polarity)” and “AP- b (Auto print difference)” when auto print mode A or B (Pr b i or 2) is selected.

Set the AD-8121B DIP switch No.3 to ON when unstable data is printed with “Pr b 4”.

*2 Set 1 when multiple lines are printed in the FZ-i / FX-i statistical calculation mode.

### Notes

Refer to “11-2 GLP Report” for print samples.

#### Settings of AD-8121B DIP switches

<table>
<thead>
<tr>
<th>MODE</th>
<th>AD-8121B DIP switch</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MODE 1</td>
<td>Print at receiving data. Standard mode, statistical calculation mode</td>
<td></td>
</tr>
<tr>
<td>MODE 2</td>
<td>Print by the AD-8121B DATA key operation or AD-8121B built-in timer. Standard mode, interval mode, chart mode</td>

</tbody>
</table>

DIP switch No.3: Handling unstable data

<table>
<thead>
<tr>
<th>ON</th>
<th>Print</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>Not printed</td>
</tr>
</tbody>
</table>

Set the DIP switch No.4 to OFF.
15-2 Connection to a Computer

The balance can be connected to a personal computer using the RS-232C serial interface. As an option, the FXi –02 USB interface is available to transmit the balance data to a personal computer.

The balance is a DCE device. Use a straight through cable when connecting to a personal computer. A commercially available modem cable can be used. When purchasing, confirm the following specifications.

15-3 Using Windows Communication Tools (WinCT)

When Windows is used as an operating system in a personal computer, the WinCT software, that is downloaded from the A&D website, can be used to transmit the weight data to the personal computer.

The WinCT has two communication methods: “RsCom” and “RsKey”.

RsCom
- Can transmit commands to control the balance.
- Can make bi-directional communication between the balance and a personal computer using the RS-232C serial interface.
- Can display or store the data using a text file format. Can also print the data using a printer connected to a personal computer.
- When several ports of a personal computer have balances connected, can communicate with each balance simultaneously.
- Can share a personal computer with other application software.

RsKey
- Can transmit the weight data output from the balance directly to other application software such as Microsoft Excel.
- Can be used with most application software.

RsWeight
- Can retrieve the weight data from the balance and display the data as a graph in real time.
- Can calculate and display the maximum, minimum, average, standard deviation and coefficient of variation.
Using the WinCT software, the balance can do the following:

1. Analyzing the weight data and the statistics with “RsKey”
   The weight data can be input directly into an Excel worksheet. Then, Excel can analyze the data to obtain sum, average, standard deviation, maximum and minimum value, and display them as a graph.

2. Controlling the balance using commands from a personal computer
   By using “RsCom”, the personal computer sends commands such as “re-zero” or “send weight data” to the balance and controls the balance.

3. Printing the balance GLP report using your printer
   The balance GLP report can be printed using a printer connected to a personal computer.

4. Receiving weight data at a certain interval
   The weight data can be received at a certain interval and data characteristic with elapsed time can be obtained.

5. Using a personal computer as an external indicator
   With the “RsKey” test mode function, a personal computer can be used as an external weight indicator for the balance. (To do this, set the balance data output mode to stream mode.)
16. COMMANDS

16-1 Command List

Note
A command has a terminator added, that is specified using the "Terminator (\r\n)" parameter of "Serial interface (\r\n)" in the function table, and is sent to the balance.

Commands to query weight data

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td>Cancels the S or SIR command.</td>
</tr>
<tr>
<td>Q</td>
<td>Requests the weight data immediately.</td>
</tr>
<tr>
<td>S</td>
<td>Requests the weight data when stabilized.</td>
</tr>
<tr>
<td>SI</td>
<td>Requests the weight data immediately.</td>
</tr>
<tr>
<td>SIR</td>
<td>Requests the weight data continuously.</td>
</tr>
<tr>
<td>$scP</td>
<td>Requests the weight data when stabilized.</td>
</tr>
</tbody>
</table>

Note: The “Q” and “SI” commands, the “S” and “\$scP” commands behave the same.

Commands to control the balance

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CAL</td>
<td>Same as the *CAL key.</td>
</tr>
<tr>
<td>EXC *</td>
<td>Calibration using an external weight</td>
</tr>
<tr>
<td>OFF</td>
<td>Turns the display off.</td>
</tr>
<tr>
<td>ON</td>
<td>Turns the display on.</td>
</tr>
<tr>
<td>P</td>
<td>Same as the ON:OFF key</td>
</tr>
<tr>
<td>PRT</td>
<td>Same as the PRINT key</td>
</tr>
<tr>
<td>R</td>
<td>Same as the *RE-ZERO key</td>
</tr>
<tr>
<td>SMP</td>
<td>Same as the SAMPLE key.</td>
</tr>
<tr>
<td>T</td>
<td>Tare key</td>
</tr>
<tr>
<td>Z</td>
<td>Same as the *RE-ZERO key</td>
</tr>
<tr>
<td>$scT</td>
<td>Same as the *RE-ZERO key</td>
</tr>
<tr>
<td>U</td>
<td>Same as the *MODE key</td>
</tr>
<tr>
<td>?ID</td>
<td>Requests the ID number.</td>
</tr>
<tr>
<td>?SN</td>
<td>Requests the serial number.</td>
</tr>
<tr>
<td>?TN</td>
<td>Requests the model name.</td>
</tr>
<tr>
<td>?PT</td>
<td>Requests the tare weight.</td>
</tr>
<tr>
<td>PT: ***</td>
<td>Changes the tare weight.</td>
</tr>
<tr>
<td></td>
<td>The unit added is the current weighing unit in A&amp;D standard format.</td>
</tr>
</tbody>
</table>

Note: The “R”, “Z” and “\$scT” commands behave the same.

\$sc : ASCII code 1Bh
* : Only for the FZ-i series
16-2 Acknowledge Code and Error Codes

When the "AK, Error code (ErCd)" parameter of "Serial interface (5iF)" is set to "1", the balance outputs <AK> code or an error code for each command as follows:

<AK> (06h) Acknowledge in ASCII code.

- When the balance receives a command to request data and can not process it, the balance transmits an error code (EC, Exx).
  When the balance receives a command to request data and can process it, the balance outputs the data.

- When the balance receives a command to control the balance and can not process it, the balance transmits an error code (EC, Exx).
  When the balance receives a command to control the balance and can process it, the balance transmits the acknowledge code.

Among commands to control the balance, the following transmit the acknowledge code both when the balance receives the command and when the balance has accomplished the command. If the command can not be processed properly, the balance transmits an error code (EC, Exx). This error can be released using the CAL command.

CAL command (When performing the calibration using a calibration weight)
ON command, P command
R command, Z command, T command (When setting the display to zero)

R command example

![Diagram of R command example]
CAL command example (FZ-i series: Calibration using the internal mass)

---
When a communication error has occurred due to external noise, or a parity error has occurred due to transmission error, the balance transmits an error code. In this case, send the command again.

**16-3 Settings Related to RS-232C**

Concerning the RS-232C, the balance has two functions: “Data output (dout)” and “Serial interface (5 iF)”. Set each function as necessary.
17. MAINTENANCE

- Do not use organic solvents to clean the balance. Clean the balance with a lint free cloth that is moistened with warm water and a mild detergent.
- Do not disassemble the balance. Contact the local A&D dealer if the balance needs service or repair.
- Use the original packing material for transportation.

18. TROUBLESHOOTING

18-1 Checking the Balance Performance and Environment

The balance is a precision instrument. When the operating environment or the operating method is inadequate, correct weighing cannot be performed. Place a sample on the pan and remove it, and repeat this several times. If the balance seems to have a problem with repeatability or to perform improperly, check as described below. Also, visit our website, http://www.aadd.co.jp/, for “Information Library” and “FAQ”. If improper performance persists after checking, contact the local A&D dealer for repair.

Checking that the balance performs properly
- Check the balance repeatability using an external weight. Be sure to place the weight in the center of the weighing pan.
- Check the balance repeatability, linearity and calibrated value using external weights with a known value.

Checking that the operating environment or weighing method is proper

Operating environment
- Is the weighing table solid enough (especially for the FZ-120i /200i /300i /500i and FX-120i /200i /300i /500i, the balances with a minimum weighing value of 0.001 g)?
- Is the balance level? Refer to “3-1 Before Use”.
- Is the operating environment free from vibration and drafts? For the FX-120i /200i /300i, has the breeze break been installed?
- Is there a strong electrical or magnetic noise source such as a motor near the balance?

Weighing method
- Is the weighing pan installed correctly?
- Is the RE-ZERO key pressed before placing a sample on the weighing pan?
- Is the sample placed in the center of the weighing pan?
- Has the balance been calibrated using an external weight? (Or one-touch calibration, only for the FZ-i series)
- Has the balance been warmed up for 30 minutes before weighing?

Sample and container
- Has the sample absorbed or lost moisture due to the ambient conditions such as temperature and humidity?
- Has the temperature of the container been allowed to equalize to the ambient temperature? Refer to “3-2 During Use”.
- Is the sample charged with static electricity? Refer to “3-2 During Use”. The FZ-120i /200i /300i /500i and FX-120i /200i /300i /500i are prone to be charged with static electricity when the relative humidity is low.
- Is the sample of magnetic material such as iron? Caution is required for weighing magnetic materials. Refer to “3-2 During Use”.

### 18-3 Asking For Repair

If the balance needs service or repair, contact the local A&D dealer.

The balance is a precision instrument. Use much care when handling the balance and observe the following when transporting the balance.

- Use the original packing material.
- Remove the weighing pan from the main unit
19. OPTIONS

Note
The FXi-02, FXi-08 and FXi-09 can not be used at the same time.

FXi-02 USB interface
(Installed in the balance, Applicable OS: Windows 98 OSR2 or later)
- Used to transmit the balance weight data (numerical value only) uni-directionally to a personal computer via USB.
- Can transmit the balance weight data (numerical value only) directly to application software such as Microsoft Excel, Word and memo pad.
- Driver installation is not necessary.

Note
To perform bi-directional communication using WinCT or input statistical data or GLP data to a personal computer, use the USB converter (AX-USB-9P-EX)

FXi-08 Ethernet interface
- Used to connect the balance to a LAN.
- The "WinCT-Plus" data communication software is provided as a standard accessory and can perform the following.
  - Acquire data from multiple balances connected to a LAN.
  - Control these balances with commands.
  - Acquire data transmitted from balances.
    Example: When pressing the PRINT key of the balance, data is output and is acquired by the computer.
  - The stored data can be used with Microsoft Excel (if installed).

FXi-09 Built-in battery unit (Ni-MH rechargeable battery pack)
- Charging time: Approximately 10 hours.
- Continuous operation hours: Approximately 8 hours

Note
The charging time depends on the operating environment. During charging, the balance is not available for use.

FXi-10 Small breeze break
- Provided for the FZ-i series (all) and FX-120i /200i /300i /500i as a standard accessory. Can be used for FX-1200i /2000i /3000i /5000i.
FXi-11 Large breeze break
- Breeze break with greater height. Can be used for all models. Convenient when a large beaker or measuring cylinder is used and requires more height.

FXi-12 Animal weighing pan
- Applicable models: FZ-1200i / 2000i / 3000i / 5000i and FX-1200i / 2000i / 3000i / 5000i
- Used for weighing small animals.
- Placing the animal weighing pan on the balance will reduce the weighing capacity by approximately 200 g.

FXi-15-EX Carrying case
- You can carry the FZ-i / FX-i series balance by placing it in the carrying case.

AX-FXi-31 Main unit cover
- Main unit protective cover provided as a standard accessory.

AD-1683 DC static eliminator
- Used to minimize weighing errors due to static electricity on the material. The AD-1683 is direct-current static eliminator. The ions generated produce no breeze and are effective over a long distance. Therefore, the balance can accurately weight powders, etc. by using the AD-1683.

AD-1684 Electrostatic field meter
- This option measures the amount of the static charge on the sample, tare or peripheral equipment and displays the result. If those are found to be charged, discharge them using the AD-1683 DC static eliminator.

AD-1689 Tweezers for calibration weight
- This option is used when calibrating the balance using an external weight.

AX-USB-9P-EX USB converter
- Adds a COM port to a PC.
- Enables bi-directional communication between the PC and the balance when a USB driver is installed.
- Can use serial communication software such as WinCT on a PC without COM ports.
AD-8920A Remote display
- Connected to the balance using the RS-232C serial interface to display the weight data away from the balance.

AD-8922A Remote controller
- Connected to the balance using the RS-232C serial interface to display the weight data and to remotely control the balance.
- Analog output and comparator output available as an option to be installed.

AD-8121B Printer
- Compact dot-matrix printer
- Statistical function, clock and calendar function, interval print function, graphic print function, dump print mode
- 5 x 7 dots, 16 characters per line
- Print paper (AX-PP143, 45 (W) x 50 (L) mm, ø65 mm)
- AC adapter or alkaline battery.

* - Accuracy right after calibration using the internal mass, with the accessory breeze break installed and in good ambient conditions (within the temperature range of 10°C to 30°C (50°F to 86°F) with no abrupt changes in temperature or humidity, no drafts, no vibration and no effect by magnetic fields or static electricity).

- With the FZ-i series balance, the environment and aging may cause internal mass value error. Calibrate using an external mass and perform maintenance regularly.

FZ-1200i / 2000i / 3000i / 5000i, the breeze break is provided as a standard accessory.

Unit: mm
## 22. TERMS/INDEX

### Terms

**Stable value**  
The weight data when the stabilization indicator appears.

**Environment**  
Ambient conditions such as vibration, drafts, temperature, static electricity and magnetic fields which affect the weighing operation.

**Calibration**  
Adjustment of the balance so that it can weigh accurately.

**Output**  
To output the weight data using the RS-232C serial interface.

**Zero point**  
A weighing reference point or the zero display. Usually refers to the value displayed when nothing is on the weighing pan.

**Digit**  
Unit of digital resolution. Used for the balance, a unit of minimum weighing value.

**Tare**  
To cancel the weight of a container which is not included in the weight data.

**Mode**  
Balance operational function.

**Re-zero**  
To set the display to zero.

**GLP**  
Good Laboratory Practice.

**Repeatability**  
Variation in measured values obtained when the same weight is placed and removed repetitively. Usually expressed as a standard deviation.  
e.g. Standard deviation=1 digit: This means that measured values fall within ±1 digit in the frequency of about 68%.

**Stabilization time**  
Time required after a sample being placed, until the stabilization indicator illuminates and the weight data is displayed.

**Sensitivity drift**  
An affect that a change in temperature causes to the weight data. Expressed as temperature coefficient.  
e.g. Temperature coefficient = 2 ppm/°C : If a load is 300 g and the temperature changes by 10°C, the value displayed changes by the following value.  
0.0002%/°C x 10°C x 300 g = 6 mg
