1. INTRODUCTION
This manual describes how the GF series balance works and how to get the most out of it in terms of performance.
Read this manual thoroughly before using the balance and keep it at hand for future reference.

1-1 About This Manual
This manual consists of the following five parts:

- **Basic operation**..............................Describes precautions on handling the balance, balance construction and basic balance operation.
- **Adapting to the environment**.............Describes response adjustment, calibration and calibration test.
- **Functions**......................................Describes various functions of the balance.
- **RS-232C serial interface**....................Describes the interface which transmits data and controls the balance.
- **Maintenance**.................................Describes maintenance, error codes, troubleshooting, specifications and options.

1-2 Features

- **Stabilization time of one second.** When **FAST** is selected for the response rate, a stabilization time of one second, to read a displayed value after a sample is placed on the pan, has been achieved.
- **Self Check Function,** provided to self-check the balance.
- **Data Memory Function,** storing weighing data or unit mass in the counting mode. (About weighing data, 40 sets of data can be stored.) **Interval Memory Mode** is provided to weigh a sample and store the weighing data periodically.
- **Good Laboratory Practice (GLP)** data output using the standard RS-232C serial interface.
- **Windows Communication Tools (WinCT),** allows easy communication with Windows-based personal computer. **Windows** is a registered trademark of the Microsoft Corporation.
- **Comparator Indicators,** displaying the comparison results.
- **Capacity Indicator,** displaying the weight value in percentage relative to the weighing capacity.
- **Hold Function,** provided for weighing a moving object such as an animal.
- **Underhook,** for measuring density and weighing magnetic materials.
- **Density Mode,** for calculating the density of a solid.
- **Multiple Weighing Units,** with most of the common units used around the world.
- **Reference Card,** provided for a quick reference to the balance operation.
- **Breeze Break,** provided for the GF-200/300/400/600/800/1000, for more accurate weighing.
1-3 Compliance

Compliance with FCC Rules

Please note that this device generates, uses and can radiate radio frequency energy. This device has been tested and has been found to comply with the limits of a Class A computing device pursuant to Subpart J of Part 15 of FCC rules. These rules are designed to provide reasonable protection against interference when this device is operated in a commercial environment. If this unit is operated in a residential area, it may cause some interference and under these circumstances the user would be required to take, at his own expense, whatever measures are necessary to eliminate the interference.

(FCC = Federal Communications Commission in the U.S.A.)

Compliance With Directives of CE mark

This device features radio interference suppression, safety regulation and restriction of Hazardous Substances in compliance with the following Council Directives

Council directive 2004/108/EC EN61326 EMC directive
Council directive 2006/95/EC EN60950 Safety of Information Technology Equipment
Council directive 2011/65/EU EN50581 Restriction of the use of certain Hazardous Substances

The CE mark is an official mandatory European marking.

Please note that any electronic product must comply with local laws and regulations when sold or used anywhere outside Europe.
A & D Instruments Ltd. hereby declare that the following Weighing product conforms to the requirements of the council directives on...

Electromagnetic Compatibility (EMC) 2004/108/EC,
Low Voltage Equipment (LVD) 2006/95/EC amended by 93/68/EEC and
Restriction of the use of certain Hazardous Substances (RoHS) 2011/65/EU

provided that they bear the CE mark of conformity.

Model/Series...GF Series

Standards applicable:

EN 61326-1:2006
Electrical equipment for measurement, control and laboratory use -EMC requirements Part 1: General requirements
Safety of Information Technology Equipment
EN 50581:2012
Technical documentation for the assessment of electrical and electronic products with respect to the restriction of hazardous substances

CE Mark first applied 11 August 2000
Signed for A&D Instruments in Oxford England 02 July 2014

P. Argus
Managing Director
2. UNPACKING THE BALANCE

2-1 Unpacking

- The balance is a precision instrument. Unpack the balance carefully. Keep the packing material to be used for transporting the balance in the future.
- The packing contents depend on the balance model. See the illustrations to confirm that everything is contained.

**GF-200/300/400/600/800/1000**

**How to assemble the breeze break (Only for GF-200/300/400/600/800/1000)**
Assemble the breeze break as shown below.
Follow the numbered sequence.

Note
Please confirm that the AC adapter type is correct for your local voltage and receptacle type.
Please confirm that the AC adapter type is correct for your local voltage and receptacle type.

2-2 Installing the Balance

Install the balance as follows:

1. Refer to “3. PRECAUTIONS” for installing the balance. Place the balance on a solid weighing table.

2. GF-200/300/400/600/800/1000
   Assemble the breeze break on the balance as shown in the illustration on page 6.

   GF-1200/2000/3000/4000/6100/6000/8000
   Assemble the breeze ring and weighing pan on the balance as shown in the illustration above.

3. Adjust the leveling feet to level the balance. Confirm it using the bubble spirit level.

4. Confirm that the adapter type is correct for the local voltage and power receptacle type.

5. Connect the AC adapter to the balance. Warm up the balance for at least 30 minutes with nothing on the weighing pan.
3. PRECAUTIONS

To get the optimum performance from the balance and acquire accurate weighing data, note the following:

3-1 Before Use

- Install the balance in an environment where the temperature and humidity are not excessive. The best operating temperature is about 20°C / 68°F at about 50% relative humidity.
- Install the balance where it is not exposed to direct sunlight and it is not affected by heaters or air conditioners.
- Install the balance where it is free of dust.
- Install the balance away from equipment which produces magnetic fields.
- Install the balance in a stable place avoiding vibration and shock. Corners of rooms on the first floor are best, as they are less prone to vibration.
- The weighing table should be solid and free from vibration, drafts and as level as possible.
- Level the balance by adjusting the leveling feet and confirm it using the bubble spirit level.
- Ensure a stable power source when using the AC adapter.
- Warm up the balance for at least 30 minutes. Plug in the AC adapter as usual.
- Calibrate the balance before use or after having moved it to another location.

Caution

Do not install the balance where flammable or corrosive gas is present.
3-2 During Use

- Discharge static electricity from the material to be weighed (hereinafter referred to as sample). When a sample could have a static charge, the weighing data is influenced. Ground the balance and try the following:
  - Eliminate the static electricity by AD-1683 as an accessory.
  - Or try to keep the ambient humidity above 45%RH.
  - Or use a metal shield case.
  - Or wipe a charged plastic sample with the wet cloth.

- This balance uses a strong magnet as part of the balance assembly, so please use caution when weighing magnetic materials such as iron. If there is a problem, use the underhook on the bottom of the balance to suspend the material away from the influence of the magnet.

- Eliminate the temperature difference between a sample and the environment. When a sample is warmer (cooler) than the ambient temperature, the sample will be lighter (heavier) than the true weight. This error is due to a rising (falling) draft around the sample.

- Make each weighing gently and quickly to avoid errors due to changes in the environmental conditions.

- Do not drop things upon the weighing pan, or place a sample on the pan that is beyond the balance weighing capacity. Place a sample in the center of the weighing pan.

- Do not use a sharp instrument such as a pencil to press the keys. Use your finger only.

- Press the RE-ZERO key before each weighing to prevent possible errors.

- Calibrate the balance periodically so as to prevent possible errors.

- Take into consideration the affect of air buoyancy on a sample when more accuracy is required.

- Keep the balance interior free of dust and foreign materials.

- The breeze break (GF-200/300/400/600/800/1000 only) and the clear main unit cover are provided as accessories. The breeze break components may be charged with static electricity when they are unpacked or when the humidity is low. If the weighing value is unstable or the balance has a problem with repeatability, remove the breeze break. Or wipe the clear plates with a moistened cloth, use an accessory DC static eliminator, AD-1683, or apply an anti-static spray.
3-3 After Use

- Avoid mechanical shock to the balance.
- Do not disassemble the balance. Contact the local A&D dealer if the balance needs service or repair.
- Do not use organic solvents to clean the balance. Clean the balance with a lint free cloth that is moistened with warm water and a mild detergent.
- Avoid dust and water so that the balance weighs correctly. Protect the internal parts from liquid spills and excessive dust.

3-4 Power Supply

- When the AC adapter is connected, the balance is in the standby mode if the standby indicator is on (refer to "4. DISPLAY SYMBOLS AND KEY OPERATION"). This is a normal state and does not harm the balance. For accurate weighing, warm up the balance for at least 30 minutes before use.
4. DISPLAY SYMBOLS AND KEY OPERATION

Key operation

Key operation affects how the balance functions. The basic key operations are:

- "Press and release the key immediately" or "Press the key" = normal key operation during measurement
- "Press and hold the key"

Display symbols

- Displays data stored in memory
- Displays the weighing data relative to the weighing capacity, in percentage, in the weighing mode (Capacity indicator)

5. WEIGHING UNITS

5-1 Units

With the GF series balance, the following weighing units and weighing modes are available:

- Counting mode
- Percent mode
- Density mode (To use this mode, it must be stored in the function table as described on page 15. For details about this mode, refer to "15. DENSITY MEASUREMENT". To select this mode, press the MODE key until the processing indicator blinks with the unit "g" displayed. "DS" appears only when the density value is displayed.)
- Programmable-unit (No unit displayed. For details, refer to "14. PROGRAMMABLE-UNIT").

A unit or mode can be selected and stored in the function table as described on page 15. If a weighing mode (or unit of weight) has been turned off, that mode or unit will be missing in the sequence. Tael has four varieties, one of which can be selected and installed at the factory.

To select a unit or mode for weighing, press the MODE key.

For details about the units and modes, see the table below:

5-2 Storing Units

The units or modes can be selected and stored in the function table. The sequence of displaying the units or modes can be arranged to fit the frequency of use. The units stored are maintained in non-volatile memory, even if the AC adapter is removed.

Select a unit or mode and arrange the sequence of display as follows:

1. Press and hold the SAMPLE key until \( \text{ba5Fnc} \) of the function table is displayed, then release the key.

2. Press the SAMPLE key several times to display \( \text{Unit} \).

3. Press the PRINT key to enter the unit selection mode.

4. Specify a unit or mode in the order to be displayed using the following keys.
   - SAMPLE key: To sequentially display the units.
   - RE-ZERO key: To specify a unit or mode. The stabilization indicator appears when the displayed unit or mode is specified.

5. Press the PRINT key to store the units or modes. The balance displays \( \text{End} \) and then displays the next menu of the function table.

6. Press the CAL key to exit the function table. Then the balance returns to the weighing mode with the selected unit.

7. To select other unit or mode for weighing, press the MODE key.
Unit setting example

The example below sets the units in the order with g (gram) as the first unit followed by pc (counting mode).

1. Press and hold the SAMPLE key until of the function table is displayed, then release the key.

2. Press the SAMPLE key several times to display Unit.

3. Press the PRINT key to enter the unit selection mode.

4. Press the RE-ZERO key to specify the unit of g
   The stabilization indicator appears when the unit is specified.

5. Press the SAMPLE key to display Unit pC.

6. Press the RE-ZERO key to specify the unit of pc
   The stabilization indicator appears when the unit is specified.

7. Press the PRINT key to store the units.
   The balance displays and then displays the next menu item of the function table.

8. Press the CAL key to exit the function table. Then the balance returns to the weighing mode with g, the unit selected first.

9. Press the MODE key to switch between g and pc (g→pc).
6. WEIGHING

6-1 Basic Operation (Gram Mode)

1. Place a container on the weighing pan, if necessary. 
   Press the RE-ZERO key to cancel the weight (tare). The 
   balance displays \( 0.00 \text{ g} \). (The decimal point position 
   depends on the balance model.)

2. Place a sample on the pan or in the container.

3. Wait for the stabilization indicator \( \square \) to be displayed. 
   Read the value.

4. Remove the sample and container from the pan.

Notes

- To use other units, press the MODE key and select an 
  appropriate unit.
- Press the SAMPLE key to turn ON or OFF the minimum 
  weighing value.
- The weighing data can be stored in memory. For details, 
  refer to “12. DATA MEMORY”.

When the ON-OFF key is pressed with a container placed 
on the weighing pan and weighing is started, the balance 
automatically cancels the weight (tare) and displays \( 0.00 \text{ g} \).
6-2 Counting Mode (PC)

This is the mode to determine the number of objects in a sample based on the standard sample unit mass. Unit mass means the mass of one sample. The smaller the variables in each sample unit mass is, the more accurate the counting will be. The GF series balance is equipped with the Automatic Counting Accuracy Improvement (ACAI) function to improve the counting accuracy.

Notes
- For counting, use samples that have a unit mass at least ten times greater than that of the minimum display in grams.
- If the sample unit mass variable is too large, it may cause a counting error.
- To improve the counting performance, use the ACAI function frequently or divide the samples into several groups and count each group.

Selecting the counting mode
1. Press the [MODE] key to select [PC] (counting mode).

Storing a sample unit mass
2. Press the [SAMPLE] key to enter the sample unit mass storing mode.
   - Even in the storing mode, pressing the [MODE] key will switch to the next mode.
3. To select the number of samples, press the [SAMPLE] key several times. It may be set to 10, 25, 50 or 100.
   - A greater number of samples will yield more accurate counting result.

4. Place a container on the weighing pan, if necessary.
   - Press the [RE-ZERO] key to cancel the weight (tare). The number specified in step 3 appears.
   - e.g.: [25 0] is displayed if 25 is selected in step 3.

5. Place the number of samples specified on the pan. In this example, 25 pieces.
6. Wait for the stabilization indicator to be displayed.
   - Press the [PRINT] key to calculate and store the unit mass.
   - The balance displays [25] (counting mode) and is set to count samples with this unit mass. (The sample unit mass is stored in non-volatile memory, and is maintained even if the AC adapter is removed.)
   - To improve the accuracy of the unit mass, proceed to step 8.
Notes

- If the balance judges that the mass of the samples is too light and is not adequate to be used as the unit mass, it displays Lo.
- If the balance judges that the mass of the samples is too light to acquire accurate weighing, it displays an error requiring the addition of more samples to the specified number. In the example above, 50-PC appears, requiring 25 more samples. Add 25 samples and press the PRINT key. When the unit mass is stored correctly, the balance proceeds to the counting mode.

Counting operation

7 Place the samples to be counted on the pan.

Note

Up to 20 unit masses can be stored in memory for the multiple sample. For details, refer to “12. DATA MEMORY”. The unit mass data in memory can be recalled or changed using commands from the computer.

Counting mode using the ACAI function

The ACAI is a function that improves the accuracy of the unit mass automatically by increasing the number of samples as the counting process proceeds.

- If a few more samples are added, the processing indicator turns on. To prevent an error, add three or more. The processing indicator does not turn on if overloaded. Try to add the same number of samples as displayed.
- The balance re-calculates the unit mass while the processing indicator is blinking. Do not touch the balance or samples on the pan until the processing indicator turns off.
- Counting accuracy is improved when the processing indicator turns off. Each time the above operation is performed, a more accurate unit mass will be obtained. There is no definite upper limit of ACAI range for the number of samples exceeding 100. Try to add the same number of samples as displayed.
- Remove all the samples used in ACAI and proceed with the counting operation using the improved unit mass.
6-3 Percent Mode (Pct)

This is the mode to display the weight value in percentage compared to a 100% reference mass and is used for target weighing or checking the sample variable.

Selecting the percent mode

1. Press the MODE key to select Pct (percent mode). If the percent mode cannot be selected, refer to "5. WEIGHING UNITS".

Storing the 100% reference mass

2. Press the SAMPLE key to enter the 100% reference mass storing mode.

   Even in the storing mode, pressing the MODE key will switch to the next mode.

3. Place a container on the weighing pan, if necessary. Press the RE-ZERO key to cancel the weight (tare). The balance displays 100 0 Pct.

4. Place the sample to be set as the 100% reference mass on the pan or in the container.

5. Press the PRINT key to store the reference mass. The balance displays 100000 Pct. (The decimal point position depends on the reference value. The reference mass is stored in non-volatile memory, and is maintained even if the AC adapter is removed.)

Note

If the balance judges that the mass of the sample is too light to be used as a reference, it displays L0.

6. Remove the sample.

Reading the percentage

7. Place a sample to be compared to the reference mass on the pan. The displayed percentage is based on the 100% reference mass.
## 7. RESPONSE ADJUSTMENT / SELF CHECK FUNCTION

### 7-1 Manual Response Adjustment

The function has three rates as follows:

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Parameter</th>
<th>Response characteristic</th>
<th>Display refresh rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>FAST</td>
<td>Cond 0</td>
<td>Fast response, Sensitive value</td>
<td>If the response rate is changed as follows:</td>
</tr>
<tr>
<td>MID.</td>
<td>Cond 1</td>
<td></td>
<td>MID. or SLOW ➤ FAST = 10 times/second</td>
</tr>
<tr>
<td>SLOW</td>
<td>Cond 2</td>
<td>Slow response, Stable value</td>
<td>FAST ➤ MID. or SLOW = 5 times/second</td>
</tr>
</tbody>
</table>

**Note**

To set the refresh rate of 5 times/second when the response rate is FAST or 10 times/second when the response rate is MID. or SLOW, change the “Display refresh rate (5Pd)” parameter of “Environment, Display (bR5Fnc)” in the function table. For details, refer to “10. FUNCTION TABLE”.

To increase the response rate, or to obtain a more stable display, perform the following:

**Operation**

1. Press and hold the **MODE** key until **RESPONSE** is displayed, then release the key.
   - Press the **MODE** key again quickly.

2. Press the **MODE** key to select a rate of the response adjustment. Either **FAST**, **MID** or **SLOW** can be selected.

3. After a few seconds of inactivity the balance displays **End**. Then, it returns to the weighing mode and displays the updated response indicator. The response indicator remains displayed for about 30 seconds.

**Note**

The response adjustment can be changed at “Condition (Cond)” of “Environment, Display (bR5Fnc)” in the function table. For details, refer to “10. FUNCTION TABLE”.
7-2 Self Check Function

This function self-checks the internal performance of the balance.

Operation

1. Press and hold the **MODE** key until **RESPONSE** is displayed, then release the key.

2. The balance automatically starts to check its internal performance.

3. After self-check, the balance displays the checking result and returns to the weighing mode.

   e.g. "**OK**"

   The example above indicates that the result of the self check is good.

Note

If improper performance is found in the self check, the balance displays **CH no**. Contact the local A&D dealer for repair.
8. CALIBRATION

8-1 Calibration Modes

The GF series balance has the following two modes.

- Calibration using an external weight
- Calibration test using an external weight (Calibration test does not perform calibration.)

Terms

The following terms are defined as follows:

- **External weight** = A weight that you have. Referred to as a calibration weight when used for calibration.
- **Calibration weight** = A weight used for calibration
- **Target weight** = An external weight used for calibration test

Caution

- Calibration adjusts the balance for accurate weighing.
  - Besides periodic calibration and before each use, perform calibration when:
    - the balance is installed for the first time.
    - the balance has been moved.
    - the ambient environment has changed.
- Do not allow vibration or drafts to affect the balance during calibration.
- To output the data for GLP using the RS-232C interface, set “GLP output (inFO)” of “Data output (dout)” to “1” or “2”. For details, refer to “10. FUNCTION TABLE”.
- Calibration test is available only when “GLP output (inFO)” of “Data output (dout)” is set to “1” or “2”,

Caution on using an external weight

- The accuracy of an external weight can influence the accuracy of weighing. Select an appropriate weight as listed below:

<table>
<thead>
<tr>
<th>Model</th>
<th>Usable calibration weight</th>
<th>Adjustable range</th>
</tr>
</thead>
<tbody>
<tr>
<td>GF-200</td>
<td>200 g, 100 g</td>
<td>-0.015 g to +0.015 g</td>
</tr>
<tr>
<td>GF-300</td>
<td>300 g, 200 g, 100 g</td>
<td></td>
</tr>
<tr>
<td>GF-400</td>
<td>400 g, 300 g, 200 g</td>
<td></td>
</tr>
<tr>
<td>GF-600</td>
<td>600 g, 500 g, 400 g, 300 g, 200 g</td>
<td></td>
</tr>
<tr>
<td>GF-800</td>
<td>800 g, 700 g, 600 g, 500 g, 400 g, 300 g, 200 g</td>
<td></td>
</tr>
<tr>
<td>GF-1000</td>
<td>1000 g, 900 g, 800 g, 700 g, 600 g, 500 g, 400 g, 300 g, 200 g</td>
<td></td>
</tr>
<tr>
<td>GF-1200</td>
<td>1000 g, 500 g</td>
<td></td>
</tr>
<tr>
<td>GF-2000</td>
<td>2000 g, 1000 g</td>
<td></td>
</tr>
<tr>
<td>GF-3000</td>
<td>3000 g, 2000 g, 1000 g</td>
<td></td>
</tr>
<tr>
<td>GF-4000</td>
<td>4000 g, 3000 g, 2000 g</td>
<td></td>
</tr>
<tr>
<td>GF-6100</td>
<td>6000 g, 5000 g, 4000 g, 3000 g, 2000 g</td>
<td></td>
</tr>
<tr>
<td>GF-6000</td>
<td>6000 g, 5000 g, 4000 g, 3000 g, 2000 g</td>
<td></td>
</tr>
<tr>
<td>GF-8000</td>
<td>8000 g, 7000 g, 6000 g, 5000 g, 4000 g, 3000 g, 2000 g</td>
<td></td>
</tr>
</tbody>
</table>

The calibration weight in bold type: factory setting
The calibration weight value can be adjusted within the range above.

Display

- This indicator means “the balance is measuring calibration data”. Do not allow vibration or drafts to affect the balance while this indicator is displayed.
8-2 Calibration Using an External Weight

This function calibrates the balance using an external weight.

Operation

1. Connect the AC adapter and warm up the balance for at least 30 minutes with nothing on the pan.

2. Press and hold the CAL key until Calout is displayed, and then release the key.

3. The balance displays Cal 0.
   - If you want to change the calibration weight (a list of usable weights is shown on page 23), press the SAMPLE key and proceed to step 4.
   - If you use the calibration weight value stored in the balance, proceed to step 5.

4. Specify the calibration weight value as follows:
   - SAMPLE key: To switch the display condition to: “All of the segments blinking” (calibration weight selection mode) or “The last two digits blinking” (value adjustment mode).
   - RE-ZERO key: To select the calibration weight or adjust the value. In the value adjustment mode, -15 digits appear after +15 digits.
   - PRINT key: To store the new weight value. Even if the AC adapter is removed, the data is maintained in non-volatile memory.
   - CAL key: To cancel the operation and return to Cal 0.

Note

Digit, when used for the GF series balance, indicates a unit of minimum weighing value.
5 Confirm that there is nothing on the pan and press the PRINT key. The balance measures the zero point. Do not allow vibration or drafts to affect the balance.

The balance displays the calibration weight value.

6 Place the displayed calibration weight on the pan and press the PRINT key. The balance measures the calibration weight. Do not allow vibration or drafts to affect the balance.

7 The balance displays End. Remove the weight from the pan.

8 If the “GLP output (info)" parameter, of the function table, is set to "1" or "2", the balance displays GLP and outputs “Calibration Report” using the RS-232C interface or stores the data in memory. For details on the calibration report format, refer to "11-2 GLP Report".

9 The balance will automatically return to the weighing mode.

10 Place the calibration weight on the pan and confirm that the value displayed is within ±2 digits of the specified value. If it is not within the range, check the ambient conditions such as breeze and vibration, also check the weighing pan. Then, repeat steps 1 to 10.
8-3 Calibration Test Using an External Weight

This function tests the balance weighing accuracy using an external mass and outputs the result. This is available only when the “GLP output (inFO)” parameter is set to “1” or “2”. (Calibration test does not perform calibration.)

Operation

1. Connect the AC adapter and warm up the balance for at least 30 minutes with nothing on the pan.
2. Press and hold the CAL key until CC0 is displayed, then release the key.
3. The balance displays CC 0.
   - If you want to change the target weight (a list of usable weights is shown on page 23), press the SAMPLE key and proceed to step 4.
   - If you use the target weight value stored in the balance, proceed to step 5.
4. Specify the target weight value as follows:
   - SAMPLE key To switch the display condition to: “All of the segments blinking” (target weight selection mode) or “The last two digits blinking” (value adjustment mode).
   - RE-ZERO key To select the target weight or adjust the value. In the value adjustment mode, -15 digits appear after +15 digits.
   - PRINT key To store the new weight value. Even if the AC adapter is removed, the data is maintained in non-volatile memory.
   - CAL key To cancel the operation and return to CC 0.

Note
Digit, when used for the GF series balance, indicates a unit of minimum weighing value.
5 Confirm that there is nothing on the pan and press the PRINT key. The balance measures the zero point and displays the measured value. Do not allow vibration or drafts to affect the balance. The balance displays the target weight value.

6 Place the displayed target weight on the pan and press the PRINT key. The balance measures the target weight and displays the measured value. Do not allow vibration or drafts to affect the balance.

7 The balance displays [End]. Remove the weight from the pan.

8 The balance displays [GLP] and outputs “Calibration Test Report” using the RS-232C interface or stores the calibration test data in memory. For details on the calibration test report format, refer to “11-2 GLP Report”.

9 The balance will automatically return to the weighing mode.
9. FUNCTION SWITCH AND INITIALIZATION

9-1 Permit or Inhibit

The balance stores parameters that must not be changed unintentionally (e.g. Calibration data for accurate weighing, Data for adapting to the operating environment, Control data for the RS-232C interface). There are five switches for the purpose of protecting these parameters. Each switch can select either "permit" or "inhibit". "Inhibit" protects parameters against unintentional operations.

Switches

(The display shown left indicates the factory settings.)

Function table
- To inhibit changes to the function table
- To permit changes to the function table

Calibration using an external weight
- To inhibit calibration using an external weight
- To permit calibration using an external weight

Not used

Operation

1. Press the ON:OFF key to turn off the display.
2. While pressing and holding the PRINT key and the SAMPLE key, press the ON:OFF key. The balance displays P5.
3. Press the PRINT key. Then the balance displays the function switches.
4. Set the switches using the following keys.

   - SAMPLE key: To select the switch to change the parameter.
   - RE-ZERO key: To change the parameter of the switch selected.
     - 0: To inhibit changes.
     - 1: To permit changes
   - PRINT key: To store the new parameter and return to the weighing mode.
   - CAL key: To cancel the operation (CLR is displayed.) To return to the weighing mode, press the CAL key once again.
9-2 Initializing the Balance

This function returns the following parameters to factory settings.

- Calibration data
- Function table
- The sample unit mass value (counting mode), 100% reference mass value (percent mode)
- The data that is stored in the balance using the data memory function
- External calibration weight and target weight value
- Function switch settings
- Liquid density and temperature in the density mode

Note
Be sure to calibrate the balance after initialization.

Operation

1. Press the ON:OFF key to turn off the display.

2. While pressing and holding the PRINT key and the SAMPLE key, press the ON:OFF key. The balance displays P5.

3. Press the SAMPLE key to display Clr.

4. Press the PRINT key.
   To cancel this operation, press the CAL key.

5. Press the RE-ZERO key.

6. Press the PRINT key to initialize the balance.
   The balance will automatically return to the weighing mode.
10. FUNCTION TABLE

The function table reads or rewrites the parameters that are stored in the balance. These parameters are stored in non-volatile memory, and are maintained even if the AC adapter is removed.

10-1 Structure and Sequence of the Function Table

The function table menu consists of two layers. The first layer is the “Class” and the second layer is the “Item”. Each item stores a parameter.

Example

This example sets “Stores weighing data” for “Data memory” and “Every 1 minute” for “Interval time”.

10-2 Display and Keys

<table>
<thead>
<tr>
<th>Display/Key</th>

- Factory setting
### Caution
The balance may not transmit the data completely at the specified refresh rate, depending on the baud rate or data added to the weighing data such as ID number.
10-4 Description of the Class “Environment, Display”

**Condition** (Cond)

- **Cond 0**: This parameter is for sensitive response to the fluctuation of a weight value. Used for powder target weighing, weighing a very light sample or when quick response weighing is required. After setting, the balance displays [FAST].

- **Cond 2**: This parameter is for stable weighing with slow response. Used to prevent a weight value from drifting due to vibration or drafts. After setting, the balance displays [SLOW].

**Note**
With “Hold function (Hold)” set to “ON (1)”, this item is used to set the averaging time.

**Stability band width** (5t-b)

This item controls the width to regard a weight value as a stable value. When the fluctuation per second is less than the parameter, the balance displays the stabilization indicator and outputs or stores the data. The parameter influences the “Auto print mode”

- **5t-b 0**: This parameter is for sensitive response of the stabilization indicator. Used for exact weighing.

- **5t-b 2**: This parameter ignores slight fluctuation of a weight value. Used to prevent a weight value from drifting due to vibration or drafts.

**Note**
With “Hold function (Hold)” set to “ON (1)”, this item is used to set the stabilization range.

**Hold function** (Hold) (Animal weighing mode)

This function is used to weigh a moving object such as an animal. When the weighing data is over the weighing range from zero and the display fluctuation is within the stabilization range for a fixed period of averaging time, the processing indicator illuminates and the balance displays the average weight of the animal. When the animal is removed from the weighing pan, the display returns to zero automatically. This function is available only when the hold function parameter is set to “/” (the animal mode indicator [ANIMAL] illuminates) and any weighing unit other than the counting mode is selected.

<table>
<thead>
<tr>
<th>Weighing range</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>GF-200/300/400/600/800/1000 0.200 g or over</td>
<td>The Animal Weighing Bowl Kit (GX-12) is available as an option for all models except GF-200.</td>
</tr>
<tr>
<td>GF-1200/2000/3000/4000/6100 2.00 g or over</td>
<td></td>
</tr>
<tr>
<td>GF-6000/8000 10.0 g or over</td>
<td></td>
</tr>
</tbody>
</table>

The averaging time and stabilization range are set in “Condition (Cond)” and “Stability band width (5t-b)”.

<table>
<thead>
<tr>
<th>Averaging time</th>
<th>Stabilization range</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Cond 0</strong> 2 seconds Faster</td>
<td>5t-b 0 About ±6% of the weight value</td>
</tr>
<tr>
<td><strong>Cond 1</strong> 4 seconds</td>
<td>5t-b 1 About ±12% of the weight value</td>
</tr>
<tr>
<td><strong>Cond 2</strong> 8 seconds More accurate</td>
<td>5t-b 2 About ±25% of the weight value</td>
</tr>
</tbody>
</table>
Zero tracking (\(trc\))
This function tracks zero point drift caused by changes in the environment and stabilizes the zero point. When the weighing data is only a few digits, turn the function off for accurate weighing.

**Note**
Digit, when used for the GF series balance, indicates a unit of minimum weighing value.

- \(trc\ 0\) The tracking function is not used. Used for weighing a very light sample.
- \(trc\ 1\) The tracking function is used. Normal zero tracking.
- \(trc\ 2\) The tracking function is used. Strong zero tracking.
- \(trc\ 3\) The tracking function is used. Very strong zero tracking.

Display refresh rate (\(SPd\))
Period to refresh the display. This parameter influences “Baud rate”, “Data output pause” and “Stream mode”.

**Note**
This item is selected automatically in the manual response adjustment.

Decimal point (\(pnt\))
The decimal point format can be selected.

Auto display-ON (\(p-on\))
When the AC adapter is connected, the display is automatically turned on without the ON:OFF key operation, to display the weighing mode. Used when the balance is built into an automated system. 30-minute warm up is necessary for accurate weighing.

Auto display-OFF (\(p-off\))
When the AC adapter is connected and no operation is performed (inactivity state) for 10 minutes, the display is automatically turned off and the standby indicator is illuminated.

Capacity indicator (\(g5i\))
In the weighing mode, the indicator displays the weighing data relative to the weighing capacity in percentage. (Zero = 0%, maximum capacity = 100%)
When the "Data memory (\(data\))" parameter is set to "1" (to store unit mass in the counting mode) or to "2" (to store the weighing data), the indicator displays the information stored in memory, such as the amount of memory data or data number.
10-5 Description of the Item “Data output mode”

The parameter setting of the “Data output mode (Prt)" applies to the performance when the “Data memory (data)” parameter is set to "2" (to store the weighing data) and when the data is transmitted using the RS-232C interface.

Key mode
When the [PRINT] key is pressed with the stabilization indicator turned on, the balance outputs or stores the weighing data and the display blinks one time.

Required setting  dout Prt 0  Key mode

Auto print modes A and B
When the displayed value is stable and the conditions of “Auto print polarity”, “Auto print difference” and reference value are met, the balance outputs or stores the weighing data.
When the [PRINT] key is pressed with the stabilization indicator turned on, the balance outputs or stores the data and the display blinks one time.

Mode A: Required setting  dout Prt 1  Auto print mode A (reference = zero)
 dout AP-P  Auto print polarity
dout AP-b  Auto print difference

Example  “For weighing the added sample each time a sample is added, with “Ar-d” set to “1” (to adjust zero after the data is output).”

Mode B: Required setting  dout Prt 2  Auto print mode B (reference = last stable value)
dout AP-P  Auto print polarity
dout AP-b  Auto print difference

Example  “For weighing while a sample is added.”

Stream mode
The balance outputs the weighing data continuously regardless of the display condition. The display does not blink in this mode. This mode is not available and the interval memory mode is used when the “Data memory (data)” parameter is set to “2” (to store the weighing data).

Required setting  dout Prt 3  Stream mode
dout dAtA 0  Data memory function is not used.
bASFnc SPD  Display refresh rate
 S IF  bPS  Baud rate

Example  “For monitoring data on a computer”

Caution
The balance may not transmit the data completely at the specified refresh rate, depending on the baud rate or data added to the weighing data such as time, date and ID number.
Interval memory mode
The weighing data is periodically stored in memory.

Required setting

\[
\begin{array}{ll}
\text{dout} & \text{Pr t 3} \\
\text{dout} & \text{dRa 2} \\
\text{dout} & \text{int}
\end{array}
\]

Interval memory mode
Data memory function is used.
Stores weighing data.
Interval time

Example
“For periodical weighing without a computer command and to output all of the data, to a computer, at one time”

10-6 Description of the Item “Data format”

A&D standard format
This format is used when the peripheral equipment can receive the A&D format. If an AD-8121B is used, set the printer to MODE 1 or 2.

- This format consists of fifteen characters excluding the terminator.
- A header of two characters indicates the balance condition.
- The polarity sign is placed before the data with the leading zeros. If the data is zero, the plus sign is used.
- The unit, consisting of three characters, follows the data.

\[
\begin{array}{llllllllll}
S & T & + & 0 & 0 & 0 & 1 & 2 & 7 & 8 & CR \mid LF
\end{array}
\]

Header Data Unit Terminator

- Stable header
- Unstable header
- Overload header

DP (Dump print) format
This format is used when the peripheral equipment cannot receive the A&D format. If an AD-8121B is used, set the printer to MODE 3.

- This format consists of sixteen characters excluding the terminator.
- A header of two characters indicates the balance condition. No overload header is used.
- The polarity sign is placed before the data, with spaces in place of leading zeros, if the data is not zero or overloaded.
- The unit, consisting of three characters, follows the data.

\[
\begin{array}{llllllllll}
W & T & + & 1 & 2 & 7 & 8 & g & CR \mid LF
\end{array}
\]

Header Data Unit Terminator

- Stable header
- Unstable header

37
KF format  
This is the Karl-Fischer moisture meter format and is used when the peripheral equipment can only communicate using this format.

- This format consists of fourteen characters excluding the terminator.
- This format has no header characters.
- The polarity sign is placed before the data, with spaces in place of leading zeros, if the data is not zero or overloaded.
- This format outputs the unit only for a stable value.

MT format  
- A header of two characters indicates the balance condition.
- The polarity sign is used only for negative data.
- The weighing data uses spaces in place of the leading zeros.
- The character length of this format changes dependent upon the unit

NU (numerical) format  
This format outputs only numerical data.

- This format consists of nine characters excluding the terminator.
- The polarity sign is placed before the data with the leading zeros. If the data is zero, the plus sign is used.
CSV format

- Separates the data of A&D standard format and the unit by a comma (,).
- Outputs the unit even when the data is overloaded.
- When the ID number and data number are added, outputs the ID number, data number and weighing data in this order and separates each item by a comma and treats all the items as one group of data.

LAB-123, No.012, ST,+00012.78, g<CR><LF>
ID number  Data number  Weighing data

Note
To add the ID number and data number, the function settings must be changed.

10-7 Description of the Data Format Added to the Weighing Data

Data number  \texttt{dout d-no 1}
This format outputs the data number just before the data is transmitted using the RS-232C interface.
- This format consists of six characters excluding the terminator.
- When CSV format (5 F TYPE 5) is selected, the period (.) is replaced with a comma (,).

Note
The data number is added only to the weighing data that is stored in memory.

ID number  \texttt{dout s-id 1}
The number to identify a specific balance.
- This format consists of seven characters excluding the terminator.

Note
When the data described above is added to the weighing data, the output is in the following order: ID number, Data number, and Weighing data.
### 10-8 Data Format Examples

#### Stable

Note

When “Pound Ounce” is selected, the data is output with the unit of ounce (oz).
10-9 Comparator Function

The results of the comparison are indicated by \textbf{HI OK LO} on the display.

Operating conditions:
- No comparison
- Comparison when the weighing data is stable or overloaded, excluding “near zero”
- Comparison when the weighing data is stable or overloaded, including “near zero”
- Continuous comparison, excluding “near zero”
- Continuous comparison, including “near zero”

To compare, use:
- Upper limit value and lower limit value
- Reference value and tolerance value

Input method:
- Digital input
- Weighing input
- Command input from a computer (Refer to “18. COMMANDS”.)

Note
"Near zero" means within ±10 digits of the minimum weighing value. For example, using a GF-2000 in gram mode, near zero is within ±0.10 g.

For the description of “Comparator mode \((C_{p} F_{nc})\)”, refer to “10-3 Details of the Function Table”.

Setting example 1
(Continuous comparison, excluding “near zero”, reference value and tolerance value, digital input)

Selecting a comparator mode
1. Press and hold the \textbf{SAMPLE} key until \textbf{ba5fnc} of the function table is displayed.
2. Press the SAMPLE key several times to display \textbf{Cp fnC}.
3. Press the PRINT key.
4. Press the RE-ZERO key several times to display \textbf{Cp 3}.
5. Press the SAMPLE key several times to display \textbf{Cp in}.
6. Press the RE-ZERO key several times to display \textbf{Cp in 2}.
7. Press the PRINT key to store the selected mode.

Entering the reference and tolerance values
8. With \textbf{Cp ref} displayed, press the PRINT key. The current setting is displayed with all the digits blinking.
   - When the current setting is not to be changed, press the PRINT or CAL key to proceed to step 9.
   - When the current setting is to be changed, press the RE-ZERO key. Change the setting using the following keys.

\begin{itemize}
  \item \textbf{SAMPLE} key To select the digit to change the value.
  \item \textbf{RE-ZERO} key To change the value of the digit selected.
  \item \textbf{MODE} key To switch the polarity.
  \item \textbf{PRINT} key To store the new setting and go to step 9.
  \item \textbf{CAL} key To cancel the new setting and go to step 9.
\end{itemize}
9 With \([CP Hi]\) displayed, press the \(\text{PRINT}\) key. The current setting is displayed. When the current setting is to be changed, change the setting using the following keys. Enter the tolerance value, in percentage to the reference value, as 100%.

- **SAMPLE** key: To select the digit to change the value.
- **RE-ZERO** key: To change the value of the digit selected.
- **PRINT** key: To store the new setting and go to step 10.
- **CAL** key: To cancel the new setting and go to step 10.

10 Press the **CAL** key to exit the comparator function and return to the weighing mode.

**Setting example 2**
(Comparison when the weighing data is stable or overloaded, including “near zero”, upper limit and lower limit, weighing input)

**Selecting a comparator mode**
1. Press and hold the **SAMPLE** key until \([P\text{FunC}]\) of the function table is displayed.
2. Press the **SAMPLE** key several times to display \([CP fnc]\).
3. Press the **PRINT** key.
4. Press the **RE-ZERO** key several times to display \([CP 2]\).
5. Press the **SAMPLE** key several times to display \([CP in]\).
6. Press the **RE-ZERO** key several times to display \([CP in 1]\).
7. Press the **PRINT** key to store the selected mode.

**Entering the upper and lower limit values**
8. With \([CP Hi]\) displayed, press the **PRINT** key. The current setting is displayed with all of the digits blinking. Press the **RE-ZERO** key to enter the weighing input mode.
9. Press the **RE-ZERO** key. The balance displays \(0.00\text{g}\). Place a sample with a mass that corresponds to the upper limit value on the pan. Press the **PRINT** key to store the upper limit value. Remove the sample. The balance displays \([CP Lo]\).
10. With \([CP Lo]\) displayed, press the **PRINT** key. The current setting is displayed with all of the digits blinking. Press the **RE-ZERO** key to enter the weighing input mode.
11. Press the **RE-ZERO** key. The balance displays \(0.00\text{g}\). Place a sample with a mass that corresponds to the lower limit value on the pan. Press the **PRINT** key to store the lower limit value. Remove the sample.
12. Press the **CAL** key to exit the comparator function and return to the weighing mode.

**Notes**
- **When Pound/Ounce is selected as a weighing unit, enter the values in ounces for comparison.**
- **In the density mode, comparison is performed to the density obtained.**
11. ID NUMBER AND GLP REPORT

- The ID number is used to identify the balance when Good Laboratory Practice (GLP) is used.
- The ID number is maintained in non-volatile memory even if the AC adapter is removed.
- The GLP output format is selected at “GLP output (inF0)” of the function table and can be output to a personal computer or printer using the RS-232C serial interface.
- The GLP output format includes the balance manufacturer, model, serial number, ID number and space for signature for weighing data, and the weight used and results for calibration or calibration test data.

When the AD-8121B is used, the date and time can be printed using the AD-8121B clock and calendar function. In this case, set the “GLP output (inF0)” parameter to “1”.

- The balance can output the following reports for GLP.
  - “Calibration report” of the calibration, using an external weight.
  - “Calibration test report” of the calibration test, using an external weight.
  - “Title block” and “End block” for the weighing data.

11-1 Setting the ID Number

1. Press and hold the SAMPLE key until 89 of the function table is displayed.
2. Press the SAMPLE key several times to display 11.
3. Press the PRINT key. Set the ID number using the following keys.
   - RE-ZERO key: To set the character of the digit selected. Refer to the display character set shown below.
   - SAMPLE key: To select the digit to change the value.
   - PRINT key: To store the new ID number and display 89.
   - CAL key: To cancel the new ID number and display 89.
4. With 89 displayed, press the CAL key to return to the weighing mode.

Display character set

```
0 1 2 3 4 5 6 7 8 9 _ A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
0 1 2 3 4 5 6 7 8 9 _ a b c d e f g h i j k l m n o p q r s t u v w x y z
```

11-2 GLP Report

Set the following parameters to output the report.

- To print the report, set the “GLP output (inF0)” parameter to “1” and use MODE 3 of the AD-8121B. For details on using the printer, refer to “17-1 Connection to the AD-8121B Printer”. If the time and date are not correct, adjust the AD-8121B clock and calendar.
- To output the report to a personal computer using the RS-232C interface, set the “GLP output (inF0)” parameter to “2”.

Note

For operational details about calibration and calibration test, refer to “8. CALIBRATION”.

**Title block and end block**

When a weight value is recorded as the GLP data, “Title block” and “End block” are inserted at the beginning and at the end of a group of weight values, in the GLP report.

**Note**

To output the report to an AD-8121B, use MODE 3 of the AD-8121B.

**Caution**

If the data memory function is used, the “Title block” and “End block” can not be output.

**Operation**

1. With the weighing data displayed, press and hold the PRINT key until Start is displayed. The “Title block” is output.
2. The weighing data is output according to the parameter setting of the data output mode.
3. Press and hold the PRINT key until End is displayed. The “End block” is output.

12. DATA MEMORY

Data memory is a function to store weighing data and unit mass in memory. Of the data in memory, the balance can only display the weighing data. The weighing data in memory is available for outputting at one time to a printer or personal computer.

One of the following data set can be stored:

- Weighing data (Up to 40 sets.)
- Unit mass in the counting mode (Up to 20 sets)

12-1 Notes on Using Data Memory

To use the memory function, set the “Data memory (dRER)” parameter of the function table. For details on setting the data memory, refer to “10. FUNCTION TABLE”.

Releasing “Clr”

If a different type of data exists in memory when the data is stored, “Clr” appears blinking in the upper left of the display. For example, you want to store weighing data but unit mass data remains in memory.

Under such a condition, before storing data, delete the data in memory as follows:

1. Press and hold the PRINT key until Clr no with “no” blinking is displayed.
2. Press the RE-ZERO key to display Clr go with “go” blinking.

   The type of data stored in memory appears on the upper left of the display as shown below:

   | Unit mass in the counting mode | PC |
   | Weighing data without time and date | -d- |

3. Press the PRINT key to delete all the data in memory.
4. The balance displays End and returns to the weighing mode.
12-2 Memory for Weighing Data

- The data memory function can store 40 sets of weighing data. Even if the AC adapter is removed, the data is maintained in non-volatile memory.
- It is not necessary that the printer or computer be continually connected to the balance, because the balance stores the weighing data in memory.
- The data in memory is available to be displayed on the balance for confirmation, or to output several sets of data at one time to a printer or personal computer. In the function setting, what data is to be added to the output data (ID number and data number) can be selected.

Storing the weighing data

Note

If “CLR” appears blinking in the upper left of the display, delete the data in memory.

1. Set the “Data memory (dMr)” parameter to “2”.

2. The storing operation depends on the “Data output mode (prt)” parameter setting. Four types of operating modes are available to store data.
   - Key mode: When the PRINT key is pressed and the displayed value is stable, the balance stores the weighing data.
   - Auto print modes A and B: When the displayed value is stable and the conditions of “Auto print polarity”, “Auto print difference” and reference value are met, the balance stores the weighing data.
   - Interval memory mode: Weighing data is stored at an interval specified in “Interval time (int)”. Press the PRINT key to start and stop this mode.

Caution

- When weighing data is being stored in memory, the data cannot be output to a personal computer using the RS-232C interface.
- “FUL” indicates that memory is full or the memory capacity has been reached. More data cannot be stored unless the memory data is deleted.
The following commands can not be used during data storage.

- **Q**: Query command for weighing data.
- **S, \( E_{scP} \)**: Query command for stable weighing data.
- **SI**: Query command for weighing data.
- **SIR**: Query command for continuous weighing data.

\( E_{sc} \): 1Bh in ASCII code

### Setting the function table

Parameter settings for each output mode are as follows:

<table>
<thead>
<tr>
<th>Mode</th>
<th>Item</th>
<th>Data output mode</th>
<th>Auto print polarity, difference</th>
<th>Data memory function</th>
<th>Interval time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Key mode</td>
<td>Prt 0</td>
<td>Not used</td>
<td>dAtA 2</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Auto print mode A</td>
<td>Prt 1</td>
<td>RP-R 0-2</td>
<td>dAtA 2</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Auto print mode B</td>
<td>Prt 2</td>
<td>RP-B 0-2</td>
<td>dAtA 2</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Interval memory mode</td>
<td>Prt 3</td>
<td>Not used</td>
<td>dAtA 2</td>
<td>int 0-8</td>
<td></td>
</tr>
</tbody>
</table>

Set each item, depending on the situation, as follows:

<table>
<thead>
<tr>
<th></th>
<th>No</th>
<th>Yes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data number</td>
<td>d-no 0</td>
<td>d-no 1</td>
</tr>
<tr>
<td>ID number</td>
<td>s-id 0</td>
<td>s-id 1</td>
</tr>
</tbody>
</table>

### Enabling the data memory function

1. Press and hold the **SAMPLE** key until [Fnc] of the function table is displayed.
2. Press the **SAMPLE** key several times to display **dOut**.
3. Press the **PRINT** key.
4. Press the **SAMPLE** key three times to display **dAtA 0**.
5. Press the **RE-ZERO** key to change **dAtA 0** to **dAtA 2**.
6. Press the **PRINT** key to save.
7. Press the **CAL** key to return to the weighing mode.
Recalling the memory data
Confirm that the “Data memory (data)” parameter is set to “2”.

1 Press and hold the PRINT key until RECALL is displayed.
2 Press the PRINT key to enter the memory recall mode. Recall the data in memory using the following keys:
   
   **RE-ZERO** key: To proceed to the next data set.
   **MODE** key: To go back to the previous data set.
   **PRINT** key: To transmit the current data using the RS-232C interface.
   With SAMPLE held down, press the CAL key:
   To delete the data currently displayed.

   **Note:** Deleting the data will not increase the number of data that can be stored.

   **CAL** key: To exit the memory recall mode.
3 Press the CAL key to return to the weighing mode.

Transmitting all memory data at one time
Confirm that the “Serial interface (5if)” parameters are set properly. For details, refer to “10. FUNCTION TABLE” and “17. CONNECTION TO PERIPHERAL EQUIPMENT”.

1 Press and hold the PRINT key until RECALL is displayed.
2 Press the SAMPLE key to display out.
3 Press the PRINT key to display out no with “no” blinking.
5 Press the RE-ZERO key to display out Go with “Go” blinking.
6 Press the PRINT key to transmit all data using the RS-232C interface.
7 The balance displays CLEAR when all data is transmitted. Press the CAL key to return to the weighing mode.

Deleting all memory data at one time
1 Press and hold the PRINT key until RECALL is displayed.
2 Press the SAMPLE key several times to display CLEAR.
3 Press the PRINT key to display Clr no with “no” blinking.
4 Press the RE-ZERO key to display Clr Go with “Go” blinking.
5 Press the PRINT key to delete all data
6 The balance displays End then RECALL when all data is deleted.
7 Press the CAL key to return to the weighing mode.
12-3 Memory for Unit Mass in the Counting Mode

- The data memory function can store 20 sets of unit mass for the counting mode. Even if the AC adapter is removed, the data is maintained in non-volatile memory. Among the 20 sets, “P01” is the memory function for the standard counting mode.
- The unit mass in memory can be recalled and used for weighing.
- The unit mass in memory can be recalled and changed.

Recalling the unit mass

1. Set the “Data memory (dR&b)” parameter to “1”.
2. Press the MODE key to select PC (counting mode).

Notes
- If the counting mode can not be selected, refer to “5. WEIGHING UNITS”.
- If “CLR” appears blinking in the upper left of the display, delete the data in memory.

3. Press and hold the PRINT key until the balance enters the sample unit mass selection mode as shown below.

   ![
   ![Unit mass number](The second data in memory)
   
4. Select the unit mass to be used using the following keys.
   - RE-ZERO key: To increase the unit mass number by one.
   - MODE key: To decrease the unit mass number by one.
   - PRINT key: To select the unit mass number to be used.
   - CAL key: To cancel the operation and go to step 5.

5. To re-store the unit mass or perform Automatic Counting Accuracy Improvement (Acai) on the stored unit mass, follow the procedure described in “6-2 Counting Mode (PC)”.

Notes
- Acai can not be performed on the recalled unit mass.
- Using the “UN:mm” command, the unit mass stored in memory can be recalled. (“mm” will be replaced by a two-digit number, 01 to 20, that corresponds to the unit mass numbers, P01 to P20.) The recalled unit mass can be output by the “?UW” command and can be changed by the “UW:” command.
13. UNDERHOOK

The underhook can be used for weighing large samples, magnetic materials or for measuring density. The built-in underhook is revealed by removing the plastic cap on the bottom of the balance. Use the underhook as shown below.

Caution
Do not apply excessive force to the underhook.
When not in use, attach the plastic cap to prevent dust from getting into the balance.
14. PROGRAMMABLE-UNIT

This is a programmable unit conversion function. It multiplies the weighing data in grams by an arbitrary coefficient set in the function table and displays the result.

The coefficient must be within the range between the minimum and maximum shown below. If the coefficient set is beyond the range, an error is displayed and the balance returns to the coefficient setting mode, prompting to enter an appropriate value. A coefficient of 1 was set at the factory.

<table>
<thead>
<tr>
<th>Model</th>
<th>Minimum coefficient</th>
<th>Maximum coefficient</th>
</tr>
</thead>
<tbody>
<tr>
<td>GF-200/300/400/600/800/1000</td>
<td>0.000001</td>
<td>1000</td>
</tr>
<tr>
<td>GF-1200/2000/3000/4000/6100</td>
<td>0.000001</td>
<td>100</td>
</tr>
<tr>
<td>GF-6000/8000</td>
<td>0.000001</td>
<td>10</td>
</tr>
</tbody>
</table>

Operation
1. Press and hold the SAMPLE key until $mL$ of the function table is displayed.
2. Press the SAMPLE key several times to display $mL$.
3. Press the PRINT key. The balance enters the mode to confirm or set the coefficient.

Confirming the coefficient
4. The current coefficient is displayed with the first digit blinking.
   - When it is not to be changed, press the CAL key and proceed to step 6.
   - When it is to be changed, press the RE-ZERO key and proceed to step 5.

Setting the coefficient
5. Set the coefficient using the following keys.
   - SAMPLE key: To select a digit to change the value. The selected digit blinks.
   - RE-ZERO key: To change the value.
   - MODE key: To change the decimal point position. Each time the switch is pressed, the decimal point position changes as follows:
     - $0.000001 \rightarrow 0.00001 \rightarrow \ldots \rightarrow 000000.1 \rightarrow 000001$
   - PRINT key: To store the new setting, display $End$ and go to step 6.
   - CAL key: To cancel the new setting and go to step 6.

Quitting the operation
6. The balance displays $Unit$. Press the CAL key to exit the programmable-unit function and return to the weighing mode.

Using the function
Press the MODE key to select the programmable-unit (no display on the unit section). Perform weighing as described in “6-1 Basic Operation (Gram Mode)”. After weighing, the balance displays the result (weighing data in grams x coefficient).
15. DENSITY MEASUREMENT

The GF series balance is equipped with a density mode. It calculates the density of a solid using the weight of a sample in air and the weight in liquid.

- The density mode was not selected for use when the balance was shipped from the factory. To use the mode, change the function table and activate the density mode.
- Two ways to set the density of a liquid are available:
  - by entering the water temperature or by entering the density directly.
- The density determination kit (GX-13) is available as an option for GF-200/300/400/600/800/1000.

Formula to obtain the density

The density can be obtained by the following formula.

\[ \rho = \frac{A}{A - B} \times \rho_s \]

Where
- \( \rho \): Density of a sample
- A: Weight value of a sample in air
- B: Weight value of a sample in liquid
- \( \rho_s \): Density of a liquid

Changing the function table

(1) Selecting the density mode

The density mode is available as one of the weighing units. To use the mode, select it in the function table. For details, refer to “5-2 Storing Units”.

(2) Selecting a way to set the density of a liquid

Select the liquid density input method from the function table below. The function table is available only when the density mode is selected.

<table>
<thead>
<tr>
<th>Class</th>
<th>Item</th>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>0</td>
<td>Water temperature</td>
</tr>
<tr>
<td>Density function</td>
<td>Liquid density input</td>
<td>1</td>
<td>Liquid density</td>
</tr>
</tbody>
</table>

\( d5 \) = Factory setting

Setting the density of a liquid

1. Press the [MODE] key as necessary to select the density mode. When the processing indicator blinks with the unit “g” displayed, it indicates that the density mode is selected.

2. In the density mode, press and hold the [MODE] key to enter the mode to set the liquid density.

Note

In the normal weighing mode, the same procedure will activate the manual response adjustment/self check function. These are not available in the density mode.

Entering the water temperature (\( ld in d5 \))

In the density mode, press and hold the [MODE] key until the water temperature currently set (unit:°C, factory setting: 25°C) is displayed. Use the following keys to change the value.

- [RE-ZERO] key: To increase the temperature by one degree. (0-99)
- [MODE] key: To decrease the temperature by one degree. (0-99)
- [PRINT] key: To store the change, display \( End \) and return to the density mode.
- [CAL] key: To cancel the change and return to the density mode.
The relation between the water temperature and density is shown below.

### Entering the density directly (Ld in L)

In the density mode, press and hold the **MODE** key until the density currently set (unit: g/cm³, factory setting: 1.000 g/cm³) is displayed. Use the following keys to change the value.

- **RE-ZERO** key: To set the value of the digit selected.
- **SAMPLE** key: To select the digit to change the value.
- **PRINT** key: To store the change, display **End** and return to the density mode.
- **CAL** key: To cancel the change and return to the density mode.

**Note**
The range to set the density is 0.0000 to 1.9999 g/cm³

### Measuring the density

In the density measurement, the balance displays the weight of a sample in air, the weight in liquid and then the density.

- **Measuring the weight of a sample in air.**

  ![ightfield:12.345 g]

  The processing indicator blinks with the unit “g” displayed.

- **Measuring the weight of a sample in liquid.**

  ![ightfield:9876 g]

  The processing indicator illuminates with the unit “g” displayed.

- **Displaying the density.**

  ![ightfield:5000 g]

  The processing indicator illuminates with “DS” displayed.

  To cycle through the above three, press the **SAMPLE** key.

**Note**
The **SAMPLE** key can not be used to change the minimum weighing value. The density is displayed with three decimal places.
Measuring procedure

1. Confirm that the balance is in the mode to measure the weight of the sample in air. ("g" displayed and processing indicator blinking)

2. Confirm that the balance indicates zero. If it does not indicate zero, press the RE-ZERO to reset the displayed value to zero.

3. Place the sample on the upper pan (in air). When the value displayed on the balance becomes stable, press the SAMPLE key to confirm the value (the weight of the sample in air). The balance enters the mode to measure the weight of the sample in liquid ("g" displayed and processing indicator illuminating).

Note
If a negative value or E (error) is displayed, the SAMPLE key is disabled.

4. Remove the sample from the upper pan and place it on the lower pan (in liquid). When the value displayed on the balance becomes stable, press the SAMPLE key to confirm the value (the weight of the sample in liquid). The balance enters the mode to display the density ("g" disappears).

Note
If E (error) is displayed, the SAMPLE key is disabled.

5. To output or store the density, press the PRINT key. The density output unit is “DS”. To measure the density of another sample, press the SAMPLE key to return to the mode to measure the weight in air and repeat the procedure described above.

Note
If the liquid temperature or the type of liquid is changed during measurement, reset the value of the liquid density as necessary. For details, refer to “Setting the density of a liquid”.

56
16. RS-232C SERIAL INTERFACE / EXTERNAL INPUT

Transmission system: EIA RS-232C
Transmission form: Asynchronous, bi-directional, half duplex
Data format:
- Baud rate: 600, 1200, 2400, 4800, 9600 bps
- Data bits: 7 or 8 bits
- Parity: Even, Odd (Data bits 7 bits)
  None (Data bits 8 bits)
- Stop bit: 1 bit
- Code: ASCII

Circuits

[Diagram of pin connections and wiring]
External input
Pin 18 and pin 19 perform the same function as pressing the **PRINT** and **RE-ZERO** keys respectively by connecting each pin to pin 7 for at least 100 ms.

Use of example

The external input connector (AX-HDB-25P/CTF) and the foot switch (AX-SW128) are sold separately.
17. CONNECTION TO PERIPHERAL EQUIPMENT

17-1 Connection to the AD-8121B Printer

Set the following parameters to use the AD-8121B printer.

<table>
<thead>
<tr>
<th>Function setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>dout Prt 0-3</td>
<td>Selects a print mode.</td>

</tbody>
</table>

Refer to “11. ID NUMBER AND GLP REPORT” for a print sample.

17-2 Connection to a Computer

The GF series balance is of the DCE type (Data Communication Equipment), which can be connected to a personal computer using the RS-232C interface.

Before connection, read the personal computer manual thoroughly.

Use a standard DCE cable for connection (cable type: straight-through).
17-3 Using Windows Communication Tools (WinCT)

When Windows is used as an operating system in a personal computer, the WinCT software can be used to transmit the weighing data to the personal computer. The WinCT has two communication methods: “RsCom” and “RsKey”. For details on WinCT, refer to the WinCT instruction manual. The current version of the WinCT can be downloaded from the A&D website.

RsCom
- Can transmit commands to control the balance.
- Can make bi-directional communication between the balance and a personal computer using the RS-232C interface.
- Can display or store the data using a text file format. Can also print the data using a printer connected to the personal computer.
- When several ports of a personal computer have balances connected, the personal computer can communicate with each balance simultaneously.
- Can share a personal computer with other application software.
- Can receive the balance GLP report.

RsKey
- Can transmit the weighing data output from the balance directly to other application software such as Microsoft Excel.
- Can be used with most application software.
- Can receive the balance GLP report.

Note
Windows and Excel are the registered trademarks of the Microsoft Corporation.

Using the WinCT software, the balance can do the following:
1. Analyzing the weighing data and the statistics input by “RsKey”
   The weighing data can be input directly into an Excel worksheet. Then, Excel can analyze the data to obtain total, average, standard deviation, maximum and minimum value, and display them in a graph.
2. Controlling the balance using commands from a personal computer
   By using “RsCom”, the personal computer sends commands such as “re-zero” or “send weighing data” to the balance and controls the balance.
3. Printing the balance GLP report using your printer
   The balance GLP report can be printed using a printer connected to the personal computer.
4. Receiving weighing data at a certain interval
   The weighing data can be received at a certain interval and data characteristic with elapsed time can be obtained.
5 Using the GF series balance memory function
   The weighing data, instead of outputting it immediately to an external device, can be stored in
   the balance’s memory. Later, all of the weighing data stored can be output to a personal
   computer at one time.

6 Using a personal computer as an external indicator
   With the “RsKey” test mode function, a personal computer can be used as an external weight
   indicator for the balance. (To do this, set the balance data output mode to stream mode.)
## 18. COMMANDS

### 18-1 Command List

#### Commands to query weighing data

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td>Cancels the S or SIR command.</td>
</tr>
<tr>
<td>Q</td>
<td>Requests the weighing data immediately.</td>
</tr>
<tr>
<td>S</td>
<td>Requests the weighing data when stabilized.</td>
</tr>
<tr>
<td>SI</td>
<td>Requests the weighing data immediately.</td>
</tr>
<tr>
<td>SIR</td>
<td>Requests the weighing data continuously.</td>
</tr>
<tr>
<td>ESPP</td>
<td>Requests the weighing data when stabilized.</td>
</tr>
</tbody>
</table>

Note: The “Q” and “SI” commands, the “S” and “ESCP” commands behave the same.

#### Commands to control the balance

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CAL</td>
<td>Same as the CAL key.</td>
</tr>
<tr>
<td>MCL</td>
<td>Deletes all data in memory.</td>
</tr>
<tr>
<td>MD::nnn</td>
<td>Deletes weighing data with the data number nnn.</td>
</tr>
<tr>
<td>OFF</td>
<td>Turns the display off.</td>
</tr>
<tr>
<td>ON</td>
<td>Turns the display on.</td>
</tr>
<tr>
<td>P</td>
<td>Same as the ON:OFF key</td>
</tr>
<tr>
<td>PT:***, ** g</td>
<td>Sets the tare value. The unit added is the unit that is output in the A&amp;D standard format. For the counting or percent mode, gram is used. Set the tare value so that the total value of the sample and the tare does not exceed the weighing capacity. Negative values can not be used.</td>
</tr>
<tr>
<td>?PT</td>
<td>Requests the tare value. Outputs the tare value set by the TR or PT: command.</td>
</tr>
<tr>
<td>R</td>
<td>Same as the RE-ZERO key</td>
</tr>
<tr>
<td>SMP</td>
<td>Same as the SAMPLE key.</td>
</tr>
<tr>
<td>U</td>
<td>Same as the MODE key</td>
</tr>
<tr>
<td>T</td>
<td>Same as the RE-ZERO key</td>
</tr>
<tr>
<td>TR</td>
<td>Tares the balance (Cancels the container’s weight.) Available only when the load on the weighing pan is greater than the zero point. The zero point is set by the R, T or Z command, by pressing the RE-ZERO key, or using the external input.</td>
</tr>
<tr>
<td>Z</td>
<td>Same as the RE-ZERO key</td>
</tr>
<tr>
<td>ESPZ</td>
<td>Same as the RE-ZERO key</td>
</tr>
</tbody>
</table>

Note: The “R”, “T”, “Z” and “ESPZ” commands behave the same.

#### Commands to control the memory function

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>?MA</td>
<td>Outputs all data in memory.</td>
</tr>
<tr>
<td>?MQnnn</td>
<td>Outputs weighing data with the data number nnn.</td>
</tr>
<tr>
<td>?MX</td>
<td>Outputs the number of weighing data in memory.</td>
</tr>
<tr>
<td>MCL</td>
<td>Deletes all data in memory.</td>
</tr>
<tr>
<td>MD::nnn</td>
<td>Deletes weighing data with the data number nnn.</td>
</tr>
<tr>
<td>UN:mm</td>
<td>Changes the unit mass stored in memory with the number of mm (01-20).</td>
</tr>
<tr>
<td>?UN</td>
<td>Outputs the unit mass number of the selected unit mass.</td>
</tr>
<tr>
<td>UW:***, ** g</td>
<td>Sets the unit mass value. e.g., UW:+0.123 g (to set the unit mass to 0.123 g;  represents a space.)</td>
</tr>
<tr>
<td>?UW</td>
<td>Outputs the unit mass value of the selected unit mass number.</td>
</tr>
<tr>
<td>?ID</td>
<td>Requests the ID number.</td>
</tr>
<tr>
<td>?SN</td>
<td>Requests the serial number.</td>
</tr>
<tr>
<td>?TN</td>
<td>Requests the model name.</td>
</tr>
</tbody>
</table>
Commands to control the comparator function

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>HI:</strong></td>
<td>Sets the upper limit value. e.g., HI:+2.34 g (to set the upper limit value to 2.34 g: * represents a space.)</td>
</tr>
<tr>
<td><strong>LO:</strong></td>
<td>Sets the lower limit value. e.g., LO:+1.23 g (to set the lower limit value to 1.23 g: * represents a space.)</td>
</tr>
<tr>
<td>?HI</td>
<td>Outputs the upper limit value.</td>
</tr>
<tr>
<td>?LO</td>
<td>Outputs the lower limit value.</td>
</tr>
</tbody>
</table>

Notes
- “nnn” and “mm” indicate, respectively, three-digit and two-digit numerical values.
- \( E_{sc} : 1Bh \) in ASCII code
- Before transmitting a command, add the terminator (<CR><LF> or <CR>), that is specified in the “Terminator (CRLF)” parameter of “Serial interface (5 if)” in the function table, to the command.
- To use a command to control the comparator function, set the “Input method (Cpin)” parameter to “0” or “1”.

18-2 Acknowledge Code and Error Codes

When the “Serial interface function (5 if)” parameter is set to “ErrCd 1”, the balance outputs <AK> code or an error code for each command as follows:

<AK> (06h)  Acknowledge in ASCII code.

- When the balance receives a command to request data and can not process it, the balance transmits an error code (EC, Exx).
  When the balance receives a command to request data and can process it, the balance outputs the data.

- When the balance receives a command to control the balance and can not process it, the balance transmits an error code (EC, Exx).
  When the balance receives a command to control the balance and can process it, the balance transmits the acknowledge code.

- When a communication error has occurred due to external noise, or a parity error has occurred due to transmission error, the balance transmits an error code. In this case, send the command again.

Among commands to control the balance, the following transmit the acknowledge code both when the balance receives the command and when the balance has accomplished the command. If the command can not be processed properly, the balance transmits an error code (EC, Exx). This error can be released using the CAL command.

CAL command (Calibration command)  ON command (Display ON command)
P command (Display ON/OFF command)  R command (RE-ZERO command)
TR command (Tare command)
18-3 Command Examples

**ON command**

- **Personal computer**:

(Net value)

(Tare value)
18-4 Control Using CTS and RTS

Depending on the “Ct5” parameter of “Serial interface (5if )”, the balance performs as follows:

Ct5 0

Regardless of whether the balance can receive a command or not, the balance keeps the CTS line Hi. The balance outputs data regardless of the condition of the RTS line.

Ct5 1

The CTS line is kept Hi normally. When the balance can not receive the next command (e.g. while the balance is processing last command), the balance sets the CTS line to Lo. The balance confirms the level of the RTS line before outputting a set of data. If the RTS level is Hi, the balance outputs data. If the RTS level is Lo, data is not output (The data is canceled).

18-5 Settings Related to RS-232C

Concerning the RS-232C, the balance has two functions: “Data output (dout)” and “Serial interface (5if )”. Set each function as necessary.
19. MAINTENANCE

- Do not use organic solvents to clean the balance. Clean the balance with a lint free cloth that is moistened with warm water and a mild detergent.
- Do not disassemble the balance. Contact the local A&D dealer if the balance needs service or repair.
- Use the original packing material for transportation.

20. TROUBLESHOOTING

20-1 Checking the Balance Performance and Environment

The balance is a precision instrument. When the operating environment or the operating method is inadequate, correct weighing can not be performed. Place a sample on the pan and remove it, and repeat this several times. If the balance seems to have a problem with repeatability or to perform improperly, check as described below. If improper performance persists after checking, contact the local A&D dealer for repair.

Checking that the balance performs properly

- Check the balance performance using the self-check function as described in "7-2 Self Check Function".
  An error display appears when a malfunction is found.
- Check the balance repeatability using an external weight. Be sure to place the weight in the center of the weighing pan.
- Check the balance repeatability, linearity and calibrated value using external weights with a known value.

Checking that the operating environment or weighing method is proper

Operating environment

- Is the weighing table solid enough (especially for the GF-200/300/400/600/800/1000, the balance with a minimum weighing value of 0.001 g)?
- Is the balance level? Refer to “3-1 Before Use”.
- Is the operating environment free from vibration and drafts? For the GF-200/300/400/600/800/1000, has the breeze break been installed?
- Is there a strong electrical or magnetic noise source such as a motor near the balance?

Weighing method

- Does the weighing pan touch the breeze ring or anything? Is the weighing pan installed correctly?
- Is the RE-ZERO key pressed before placing a sample on the weighing pan?
• Is the sample placed in the center of the weighing pan?
• Has the balance been calibrated using an external mass?
• Has the balance been warmed up for 30 minutes before weighing?

Sample and container
• Has the sample absorbed or lost moisture due to the ambient conditions such as temperature and humidity?
• Has the temperature of the container been allowed to equalize to the ambient temperature? Refer to “3-2 During Use”.
• Is the sample charged with static electricity? Refer to “3-2 During Use”.
  The GF-200/300/400/600/800/1000 is prone to be charged with static electricity when the relative humidity is low.
• Is the sample of magnetic material such as iron? Caution is required for weighing magnetic materials. Refer to “3-2 During Use”

20-2 Error Codes

<table>
<thead>
<tr>
<th>Display</th>
<th>Error code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Error 1" /></td>
<td>EC, E11</td>
<td><strong>Stability error</strong>&lt;br&gt;The balance can not stabilize due to an environmental problem. Prevent vibration, drafts, temperature changes, static electricity and magnetic fields.&lt;br&gt;Refer to “3. PRECAUTIONS” for details on the operating environment and “7. RESPONSE ADJUSTMENT” about adapting the balance to the environment.&lt;br&gt;To return to the weighing mode, press the <strong>CAL</strong> key.</td>
</tr>
<tr>
<td><img src="image" alt="Error 2" /></td>
<td>Out of range error&lt;br&gt; The value entered is beyond the settable range. Re-enter the value.</td>
<td></td>
</tr>
<tr>
<td><img src="image" alt="CAL E" /></td>
<td>EC, E20</td>
<td><strong>Calibration weight error</strong>&lt;br&gt;The calibration weight is too heavy. Confirm the calibration weight value.&lt;br&gt;Press the <strong>CAL</strong> key to return to the weighing mode.</td>
</tr>
<tr>
<td><img src="image" alt="CAL E" /></td>
<td>EC, E21</td>
<td><strong>Calibration weight error</strong>&lt;br&gt;The calibration weight is too light. Confirm the calibration weight value.&lt;br&gt;Press the <strong>CAL</strong> key to return to the weighing mode.</td>
</tr>
<tr>
<td><img src="image" alt="E" /></td>
<td>Overload error&lt;br&gt;A sample beyond the balance weighing capacity has been placed on the pan.&lt;br&gt;Remove the sample from the pan.</td>
<td></td>
</tr>
<tr>

<td>Error code</td>
<td>Description</td>
</tr>
<tr>
<td>---------</td>
<td>------------</td>
<td>-------------</td>
</tr>
</tbody>
</table>
| ![Display](image) | -E | **Weighing pan Error**  
The weight value is too light.  
Confirm that the weighing pan is properly installed and calibrate the balance. |
| ![Display](image) | La | **Sample mass error**  
The balance can not store the sample for the counting mode or for the percent mode because it is too light.  
Use a larger sample. |
| ![Display](image) | ![Display](image) | **Unit mass error**  
The sample unit mass for the counting mode is too light. Storing and using it for counting will cause a counting error.  
Add samples to reach the specified number and press the PRINT key.  
Pressing the PRINT key without adding samples will shift the balance to the counting mode. But, for accurate counting, be sure to add samples. |
| ![Display](image) | (CHECK NO) | **Internal error**  
Indicates an internal error as the result of self-check function.  
Repair is required. Contact the local A&D dealer. |
| ![Display](image) | (Blinking) | **Memory full**  
The amount of weighing data in memory has reached the maximum capacity.  
Delete data in memory to store new data. For details, refer to “12. DATA MEMORY”. |
| ![Display](image) | | **Memory type error**  
The type of memory set in the function table and type of data stored are different.  
For details, refer to “12. DATA MEMORY”. |
| ![Display](image) | EC, E00 | **Communications error**  
A protocol error occurred in communications.  
Confirm the format, baud rate and parity. |
| ![Display](image) | EC, E01 | **Undefined command error**  
An undefined command was received.  
Confirm the command. |
| ![Display](image) | EC, E02 | **Not ready**  
A received command can not be processed.  
e.g. The balance received a Q command, but not in the weighing mode.  
e.g. The balance received a Q command while processing a RE-ZERO command.  
Adjust the delay time to transmit a command. |
<table>
<thead>
<tr>
<th>Display</th>

</thead>
<tbody>
<tr>
<td>EC, E03</td>
<td>Timeout error</td>
<td>If the timeout parameter is set to “t-UP 1”, the balance did not receive the next character of a command within the time limit of one second. Confirm the communication.</td>
</tr>
<tr>
<td>EC, E04</td>
<td>Excess characters error</td>
<td>The balance received excessive characters in a command. Confirm the command.</td>
</tr>
<tr>
<td>EC, E06</td>
<td>Format error</td>
<td>A command includes incorrect data. e.g. The data is numerically incorrect. Confirm the command.</td>
</tr>
<tr>
<td>EC, E07</td>
<td>Parameter setting error</td>
<td>The received data exceeds the range that the balance can accept. Confirm the parameter range of the command.</td>
</tr>
</tbody>
</table>

**Other errors**
If the errors described above cannot be released or other errors are displayed, contact the local A&D dealer.

### 20-3 Asking For Repair

If the balance needs service or repair, contact the local A&D dealer.

The balance is a precision instrument. Use much care when handling the balance and observe the following when transporting the balance.

- Use the original packing material.
- Remove the weighing pan from the main unit.

600/800/1000

Glass Breeze Break (GX-11)
For GF-1200/2000/3000
4000/6100/6000
8000

Animal Weighing Bowl Kit (GX-12)
For all models except GF-200
The mass of the Animal Weighing Bowl Kit is approx. 200g.

Density Determination Kit (GX-13)
For GF-200/300/400
600/800/1000

GX-02 USB interface (Applicable OS is Windows 98 OSR2 or later.)
To be installed in place of the RS-232C interface.
- May be used to transmit the balance weighing data to a personal computer.
- The balance weighing data can be transmitted to applications such as Excel, Word and memo pad for Windows automatically.
- Driver installation is not necessary.
- To perform bi-directional communications using WinCT, to output the statistical data or GLP to a personal computer by using the personal computer USB interface, use the AX-USB-25P USB converter.

AD-1682 Rechargeable battery
- Allows use of the balance in a place where AC power is not available.

AD-8121B Printer
- Compact dot-matrix printer
- Statistical function, clock and calendar function, interval print function, graphic print function, dump print mode
- 5 x 7 dots, 16 characters per line
- Print paper (AX-PP143, 45 (W) x 50 (L) mm, ø65 mm)
- AC adapter or alkaline battery.

AD-8526 LAN converter
- This option can be used to connect the RS-232C interface of the balance to the Ethernet (LAN) port of a computer. This allows management of the balance weighing data with a computer connected to a network.
AD-8920 Remote display
- Connected to the GF series using the RS-232C interface to display the weighing data away from the balance.

AD-8922 Remote controller
- Connected to the GF series using the RS-232C interface to display the weighing data and to remotely control the balance.

AX-SW128 Foot switch
- Used to externally transmit a RE-ZERO or PRINT signal to the balance.

AX-USB-25P-EX USB converter
- Adds a COM port to a PC.
- Enables bi-directional communication between the PC and the balance when a USB driver is installed.
- Can use serial communication software such as WinCT on a PC without COM ports.
- An RS-232C cable is provided to connect the USB converter to the balance.
AD-1683 DC static eliminator
- Used to minimize weighing errors due to static electricity on the material.

AD-1684 Electrostatic field meter
- This option measures the amount of the static charge on the sample, tare or peripheral equipment and displays the result.
  If those are found to be charged, discharge them using the AD-1683 DC static eliminator.

AD-1689 Tweezers for calibration weight
- This option is used when calibrating the balance using an external weight.

Options installed at the factory before shipment:
GX-04 Comparator output with a buzzer / RS-232C / Current loop output
- Used to compare weighing data and output the results.

GX-06 Analog output / Current loop output
- Used to output the weighing data as an analog voltage.
23. EXTERNAL DIMENSIONS

GF-200/300/400/600

GF-1200/2000/3000/4000/6100/6000/8000

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Stable value</strong></td>
<td>The weight data when the stabilization indicator appears.</td>
</tr>
<tr>
<td><strong>Environment</strong></td>
<td>Ambient conditions such as vibration, drafts, temperature, static electricity and magnetic fields which affect the weighing operation.</td>
</tr>
<tr>
<td><strong>Store</strong></td>
<td>To save the weighing data, unit mass or calibration data using the data memory function.</td>
</tr>
<tr>
<td><strong>Calibration</strong></td>
<td>Adjustment of the balance so that it can weigh accurately.</td>
</tr>
<tr>
<td><strong>Output</strong></td>
<td>To output the weighing data using the RS-232C interface.</td>
</tr>
<tr>
<td><strong>Zero point</strong></td>
<td>A weighing reference point or the zero display. Usually refers to the value displayed when nothing is on the weighing pan.</td>
</tr>
<tr>
<td><strong>Data number</strong></td>
<td>Numbers assigned sequentially when weighing data or unit weight is stored.</td>
</tr>
<tr>
<td><strong>Digit</strong></td>
<td>Unit of digital resolution. Used for the balance, a unit of minimum weighing value.</td>
</tr>
<tr>
<td><strong>Tare</strong></td>
<td>To cancel the weight of a container which is not included in the weighing data.</td>
</tr>
<tr>
<td><strong>Mode</strong></td>
<td>Balance operational function.</td>
</tr>
<tr>
<td><strong>Re-zero</strong></td>
<td>To set the display to zero.</td>
</tr>
<tr>
<td><strong>GLP</strong></td>
<td>Good Laboratory Practice.</td>
</tr>
<tr>
<td><strong>Repeatability</strong></td>
<td>Variation in measured values obtained when the same weight is placed and removed repetitively. Usually expressed as a standard deviation.</td>
</tr>
<tr>
<td><strong>Stabilization time</strong></td>
<td>Time required after a sample being placed, until the stabilization indicator illuminates and the weighing data is displayed.</td>
</tr>
<tr>
<td><strong>Sensitivity drift</strong></td>
<td>An affect that a change in temperature causes to the weighing data. Expressed as temperature coefficient.</td>
</tr>
<tr>
<td></td>
<td>e.g. Temperature coefficient = 2 ppm/°C : If a load is 300 g and the temperature changes by 10°C, the value displayed changes by the following value.</td>
</tr>
<tr>
<td></td>
<td>0.0002%/°C x 10°C x 300 g = 6 mg</td>
</tr>
