Dear Customers

Congratulations on purchasing a state-of-the-art A&D thermometer, one of the most advanced thermometers available today. Designed for ease of use and accuracy. This thermometer will facilitate your thermometer regimen.

We recommend that you read through this manual carefully before using the device for the first time.

The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by A&D is under license. Other trademarks and trade names are those of their respective owners.

Preliminary Remarks

- This device conforms to the European Directive 93/42 EEC for Medical Products. This is made evident by the €0123 mark of conformity. (0123: The reference number to the involved notified body.)

- This device fulfills the provisions of BS EN 12470 Clinical thermometers - Part 3: Performance of compact electrical thermometers (non-predictive and predictive) with maximum device.

- The device is a Continua certified, Bluetooth® wireless technology enabled medical device.

- The device is designed to be used in the medical facilities.

- This device is designed to measure body temperature.

- This device is designed to be operated by an adult (18 years old or older).

- This device intends to measure the body temperature of the patient (5 years old or older).
Precautions

- Precision components are used in the construction of this device. Extremes in temperature, humidity, direct sunlight, shock or dust should be avoided. It may be cause of losing performances of sensor, battery, electrical terminals and this device.

- This device is the thermometer to measure an oral temperature of bottom side of tongue. Do not measure a temperature of other position so it is incorrect.

- Clean the device with a dry, soft cloth or a cloth dampened with water and a neutral detergent. Never use alcohol, benzene, thinner or other harsh chemicals to clean the device.

- Clean the device before and after use. Keep cleanly to be able to insert into mouth. It may be the cause of occurring a cross-infection if not clean.

- Avoid excessive shock. It may be the cause of a malfunction.

- Do not put the device in the neighborhood of heater. Prevent the device from splashing of a hot water. It may be the cause of a malfunction.

- The device is not water resistant. Prevent rain, sweat and water from soiling the device.

- Measurements may be distorted if the device is used close to televisions, microwave ovens, X-ray or other devices with strong electrical fields.

- Wireless communication devices, such as a networking devices, mobile phones, cordless phones and their base stations, walkie-talkies can affect this thermometer. Therefore, a minimum distance of 3.3 meters should be kept from such devices.

- When reusing the device, confirm that the device is clean.

- Used equipment, parts and battery are not treated as ordinary household waste, and must be disposed of according to the applicable local regulations.

- Do not modify the device. It may cause accidents or damage to the device.

- Do not let children use the device by themselves and do not use the device in a place within the reach of infants.

- There are small parts that may cause a choking hazard if swallowed by mistake by infants.

- When the liquid inside of the battery invades into an eye, wash eye with large quantities of water as possible as quickly, consult the doctor for diagnose and treatment. It may be the cause of blindness and injury, if not perform.
When your skin and cloth are touched to the liquid inside of the battery, wash them with large quantities of water.

Replacement of battery by inadequately trained personnel could result in a HAZARD (such as excessive temperatures, fire or explosion).

Use the battery, removable parts and materials that are described in this manual. It may be the cause of malfunction and injury, if not use.

Insert the battery with proper polarities (+) and (−) into the compartment. It may be the cause of malfunction and injury, if not insert correctly.

Do not short-circuit the battery. Failure to do so may lead to fluid leakage, heat generation or bursting, and resulting in injury.

Do not heat the battery. Failure to do so may lead to fluid leakage, bursting, and resulting in injury.

Prevent the device from chewing and bending. It may be the cause of malfunction and injury, if it is chewed and bended.

We recommend that you read through this manual carefully before using the device for the first time.

Contraindications
The following are precautions for proper use of the device.

Do not use the device where flammable gases such as anesthetic gases are present. It may cause an explosion.

Do not use the device in highly concentrated oxygen environments, such as a high-pressure oxygen chamber or an oxygen tent. It may cause a fire or explosion.

</table>
Installing / Changing the Battery
1. Remove the battery cover.
2. Remove the used battery with a stick.
3. Insert new one into the battery compartment as shown, taking care that the polarities (+) and (−) are correct.
4. Replace the battery cover. Use only CR2032 battery.

Caution
☐ Insert the battery as shown in the battery compartment. If installed incorrectly, the device will not work.
☐ When (Low battery mark) blinks in the display, replace battery with new one. Replace the battery after the device turns off and wait for two seconds or more.
☐ (Low battery mark) does not appear when the battery is drained.
☐ Use the specified battery only. The battery provided with the device is for testing thermometer performance and may have a limited life.
☐ Remove the battery if the device is not to be used for a long time. The battery may leak and cause a malfunction.
☐ Keep the thermometer out of the reach of children. A child may swallow the battery while playing with it. If a child should swallow the battery, seek medical treatment immediately.
Using the Thermometer

Wireless Function

Caution

- In the unlikely event that this thermometer causes radio wave interference to a different wireless station, change the location where this thermometer is used or stop use immediately.

- Be sure to use in a location where visibility between the two devices that you want to connect is good. The connection distance is reduced by the structure of buildings or other obstructions. In particular, connection may be impossible when devices are used on either side of reinforced concrete.

- Do not use Bluetooth® connection in the range of a wireless LAN or other wireless devices, near devices that emit radio waves such as microwaves, in locations where there are many obstructions, or in other locations where signal strength is weak. Doing so may result in frequent loss of connection, very slow communication speeds and errors.

- Using close to an IEEE802.11g/b/n wireless LAN device may cause mutual interference to occur, which may result in reduced communication speeds or which may prevent connection. In this case, switch off the power supply to the device that is not being used, or use the thermometer in a different location.

- If the thermometer does not connect normally when used near a wireless station or broadcast station, use the thermometer in a different location.

- A&D Company, Limited cannot accept liability for any damages incurred due to impaired operation or data loss, etc. that occur through the use of this device.

- This device is not guaranteed to connect to all Bluetooth® compatible devices.
Using the Thermometer

Bluetooth® Transmission

This device is equipped with a Bluetooth® wireless function and can connect to the following Bluetooth® devices.

- Continua certified devices
- iPhone, iPad, iPod (iPhone 4S or later)
- Applications and devices that are compatible with Bluetooth 4.0.

Each device needs an application to receive data. For connection methods, refer to the manual for each device.

Bluetooth® Smart devices carry the Bluetooth® Smart logo mark.

Continua certified devices carry the Continua logo mark.
Using the Thermometer

Pairing

A Bluetooth® device needs to be paired with a different specific device in order to communicate with that device. If this thermometer is paired with a receiver device from the start, measurement data is transmitted automatically to the receiver device each time a measurement is made.

Cautions for Pairing

- Only one device can be paired with this thermometer at one time. If the receiver device cannot receive measurement data, try pairing again.
- If another receiver device is paired, the first device will be unpaired to enable the new device to be paired.

Follow the steps below to pair the thermometer with a Bluetooth® compatible receiver device. Also refer to the manual of the receiver device. Please use a pairing wizard if one is provided.

Pairing Procedure

1. Follow the instructions in the manual of the receiver device to switch it to the pair able status. When pairing this thermometer, place it as close as possible to the receiver device to be paired with.

2. Install the battery as described on page 7. Press the \( \bigcirc \) switch to turn the thermometer on. Press the \( \bigcirc \) switch while "L" is displayed. The thermometer can be found by the receiver device while "Pr" is displayed for approx. one minute.

3. Find, select and build a pair with the receiver device in accordance with its manual. When the pairing of the receiver device is built, "End" of the decision of the pairing is displayed.

4. If "E - lO" is displayed or pairing is failed, remove the battery and try steps 1 to 3 again.

5. Follow the manual of the pairing receiver device to search for, select and pair with this thermometer.

Communication Distance

The communication distance between this thermometer and the receiver device is approximately 5 m. This distance is reduced by the conditions in the surrounding environment, so be sure to check that the distance is short enough for a connection to be made after measurement is complete.
Using the Thermometer

Measurement and Transmitting Data
The communication performs the following steps after building the paring.
Keep the condition of the receiver device so as to communicate.
1. Turn on the thermometer. Data is measured automatically.
2. Data is transmitted after finishing the measurement.

Transmitting Temporarily Stored Data
In cases when the receiver device cannot receive measurement data, the measurement data is temporarily stored in the thermometer memory. The data stored in the memory is transmitted the next time a connection is successfully made to the receiver device.
A total of 90 sets of measurement data can be stored. When the amount of data exceeds 90 sets, the oldest data is deleted and the new data is stored.
The amount of data that can be stored temporarily may vary with the application.

Time
This thermometer has a built-in clock. The date and time that a measurement was taken is included in the measurement data.
The built-in clock is designed to be automatically adjusted by syncing with the clock of a receiver device. Refer to the specifications of the receiver device. This thermometer has no clock adjustment function.

Changing Units
1. Press and hold the switch above 6 seconds when turning off the thermometer. New unit is displayed after blinking a last unit. The thermometer is turns off automatically.
2. When the same operation is performed again, an effective unit is exchanged.

The unit is stored in the memory.
The unit of the factory setting is °C (centigrade).
Using the Thermometer

Applying the Thermometer
☑ Put the thermometer sensor on the mouth floor under the tongue, at the root of the tongue and at the side of the lingual frenulum.
☑ Keep the position of the sensor during measurement

Measurement Time
☑ When the prediction measurement is used, keep the sensor position for approximately 30 seconds with placing the sensor at a correct position in the mouth.
☑ When the equilibrium measurement is used, keep the sensor position for approximately 5 minutes with placing the sensor at a correct position in the mouth.

We recommend to use the equilibrium measurement for a precision thermometry.

After Measurement
After measurement, press and hold the switch for one or more seconds to turn off the device.

Note: The device has an automatic power shut-off function, which turns the power off approximately one minute after measurement.
Measurements

Predictive Measurement

1. Press the [●] switch. When the last measurement is stored, it is displayed approximately two seconds.

2. Wait until "L" is displayed.

3. Put the temperature sensor on the mouth floor (under the tongue, at the root of the tongue and at the side of the lingual frenulum). Close the mouth gently.

4. Keep the sensor position during measurement for approximately 30 seconds.

5. The count down indicator is displayed. The predictive measurement mark blinks and rotates.

6. The result is displayed for approximately 15 seconds, the predictive measurement mark lights, the LED of the [●] switch blinks and buzzer sounds when the predictive measurement finishes.

7. Select an operation.
   - Press the [●] switch to turn off the thermometer.
   - Keep the sensor position to use the equilibrium measurement. Proceed to next page.
Measurements

Equilibrium Measurement

8. When the equilibrium measurement is starts, the mark blinks. Keep the sensor position for approximately five minutes.

9. The result is displayed for approximately one minute, the equilibrium measurement mark lights, the LED of the switch blinks and buzzer sounds when the equilibrium measurement finishes.

10. Press and hold the switch to turn off the device.

Notes for Accurate Measurement

- The mark lights when the data is stored in memory.
- The equilibrium measurement is performed after the predictive measurement is finished.
- The device is provided with an automatic power shut-off function with the buzzer that the device is turned off at approximately one minute later from removing it or displaying data. The device can be turned off when pressing and holding the switch.
- In measurement, breathe with using nose and closing mouth.
- Should the device detect a condition that is abnormal, it will stop the measurement and display an error symbol. See page 6 for the description of the symbols.
- This thermometer is intended for use by adults only. Consult with your physician before using this device on a child. A child should not use this device unattended.
Features

Predictive Measurement
- The predictive measurement calculates the equilibrium temperature after five minutes when the body temperature is measured for 30 seconds. It is based on an ascending thermal curve. If you need a precision data, we recommend to use the equilibrium measurement for a precision thermometry.

Equilibrium Measurement
- The body temperature can be measured using for five minutes.

Switch with Flash Action
- When pressing the switch, this switch flashes. When finishing the measurement, this switch flashes.

Last Reading Display and Memory
- The previous reading stored in memory is automatically displayed when turning on the thermometer. The new reading is stored in memory when measuring the temperature.

Temperature Unit
- Temperature unit of Celsius or Fahrenheit can be selected.

Bluetooth®
- Temperature data can be transmitted to the receiver that is paired with the thermometer.
# Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Reason</th>
<th>Recommended Action</th>

<tr>
<td>Body temperature is displayed high.</td>
<td>The device calculates a equilibrium temperature after five minutes. Therefore, it includes error.</td>
<td>Measure after several minutes again or use the equilibrium measurement.</td>
</tr>
<tr>
<td>Data transmission error</td>
<td>The paring is not established.</td>
<td>Place the device in proximity of the receiver. Make a paring.</td>
</tr>
<tr>
<td></td>
<td>Battery is not enough.</td>
<td>Replace battery to new one.</td>
</tr>
</tbody>
</table>

**Note:** If the actions described above do not solve the problem, contact the dealer. Do not attempt to open or repair this device, as any attempt to do so will make your warranty invalid.
Maintenance

Maintenance
- Do not open the device. It uses delicate electrical components and an intricate air unit that could be damaged. If you cannot fix the problem using the troubleshooting instructions, request service from your dealer or from the A&D service group. The A&D service group will provide technical information, spare parts and units to authorized dealers.
- The device was designed and manufactured for a long service life. However it is generally recommended to have the device inspected every two years, to ensure proper functioning and accuracy. Please contact the authorized dealer in your area or A&D for maintenance.

Cleaning
- Clean the device with a dry, soft cloth or a cloth dampened with water and a neutral detergent and wrung tightly.
- Wipe the temperature sensor of the device with a cloth to soak disinfectant ethanol (76.9 to 81.4 v/v%).

Storage
- Store the device with avoiding extremes in temperature, humidity, direct sunlight, vibration, shock, dust or fire. Keep it put into the case with dry air and room temperature.

Cautions
- The device is not waterproof device. Do not splash water on it and avoid exposure to moisture.
- Do not use an organic solvent such as thinner or benzene.
- The device can not be sterilized by autoclave, EOG or formaldehyde etc.

Regular Inspection
- The thermometer is a precision device. Therefore, inspect in regularly. Request an inspection to the dealer where you have purchased the device when the device is in needs of an inspection.

Medical Electrical Equipment needs special precautions regarding EMC and needs to be installed and put into service according to the EMC information provided in the following. Portable and mobile RF communication equipment (e.g. cell phones) can affect Medical Electrical Equipment. The use of accessories and cables other than those specified may result in increased emissions or decreased immunity of the unit.

### Guidance and manufacturer’s declaration – electromagnetic emissions

<table>
<thead>
<tr>
<th>Emissions test</th>
<th>Compliance</th>
<th>Electromagnetic environment – guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>RF emissions CISPR 11</td>
<td>Group 1</td>
<td>The A&amp;D unit uses RF energy only for its internal function. Therefore, its RF emissions are very low and are not likely to cause any interference in nearby electronic equipment.</td>
</tr>
<tr>
<td>RF emissions CISPR 11</td>
<td>Class B</td>
<td>The A&amp;D unit is suitable for use in all establishments, including domestic establishments and those directly connected to the public low-voltage power supply network that supplies buildings used for domestic purposes.</td>
</tr>
<tr>
<td>Harmonic emissions IEC 61000-3-2</td>
<td>Class A</td>
<td></td>
</tr>
<tr>
<td>Voltage fluctuations / flicker emissions IEC 61000-3-3</td>
<td>N.A.</td>
<td></td>
</tr>
</tbody>
</table>

### Recommended separation distances between portable and mobile RF communications equipment and the A&D unit

The A&D unit is intended for use in an electromagnetic environment in which radiated RF disturbances are controlled. The customer or the user of the A&D unit can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the A&D unit as recommended below, according to the maximum output power of the communications equipment.

<table>
<thead>
<tr>
<th>Rated maximum output power of transmitter W</th>
<th>Separation distance according to frequency of transmitter m</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>150 kHz to 80 MHz</td>
</tr>
<tr>
<td></td>
<td>$d = 1.2\sqrt{P}$</td>
</tr>
<tr>
<td>0.01</td>
<td>0.12</td>
</tr>
<tr>
<td>0.1</td>
<td>0.38</td>
</tr>
<tr>
<td>1</td>
<td>1.2</td>
</tr>
<tr>
<td>10</td>
<td>3.8</td>
</tr>
<tr>
<td>100</td>
<td>12</td>
</tr>
</tbody>
</table>

For transmitters rated at a maximum output power not listed above, the recommended separation distance $d$ in meters (m) can be estimated using the equation applicable to the frequency of the transmitter, where $P$ is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

**NOTE 1** At 80 MHz and 800 MHz, the separation distance for the higher frequency range applies.

**NOTE 2** These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.
Guidance and manufacturer’s declaration – electromagnetic immunity

The A&D unit is intended for use in the electromagnetic environment specified below. The customer or the user of the A&D unit should assure that it is used in such an environment.

<table>
<thead>
<tr>
<th>Immunity test</th>
<th>IEC 60601 test level</th>
<th>Compliance level</th>
<th>Electromagnetic environment – guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Conducted RF</td>
<td>3 V rms 150 kHz to 80 MHz</td>
<td>3 V rms 80 MHz to 2.5 GHz</td>
<td>Portable and mobile RF communications equipment should be used no closer to any part of the A&amp;D unit, including cables, than the recommended separation distance calculated from the equation applicable to the frequency of the transmitter. Recommended separation distance: $d = 1.2 \sqrt{P}$ $d = 1.2 \sqrt{P}$ 80 MHz to 800 MHz $d = 2.3 \sqrt{P}$ 800 MHz to 2.5 GHz where $P$ is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer and $d$ is the recommended separation distance in meters (m). Field strengths from fixed RF transmitters, as determined by an electromagnetic site survey, should be less than the compliance level in each frequency range. Interference may occur in the vicinity of equipment marked with the following symbol:</td>
</tr>
<tr>
<td>Radiated RF</td>
<td>3 V/m 80 MHz to 2.5 GHz</td>
<td>3 V/m 80 MHz to 2.5 GHz</td>
<td></td>
</tr>
</tbody>
</table>

NOTE 1 At 80 MHz and 800 MHz, the higher frequency range applies.
NOTE 2 These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.

Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) telephones and land mobile radios, amateur radio, AM and FM radio broadcast and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the A&D unit is used exceeds the applicable RF compliance level above, the A&D unit should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as re-orienting or relocating the A&D unit.

Field strengths from fixed RF transmitters, such as base stations for radio (cellular/cordless) telephones and land mobile radios, amateur radio, AM and FM radio broadcast and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the A&D unit is used exceeds the applicable RF compliance level above, the A&D unit should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as re-orienting or relocating the A&D unit.

Over the frequency range 150 kHz to 80 MHz, field strengths should be less than 3 V/m.
The A&D unit is intended for use in the electromagnetic environment specified below. The customer or the user of the A&D unit should assure that it is used in such an environment.
